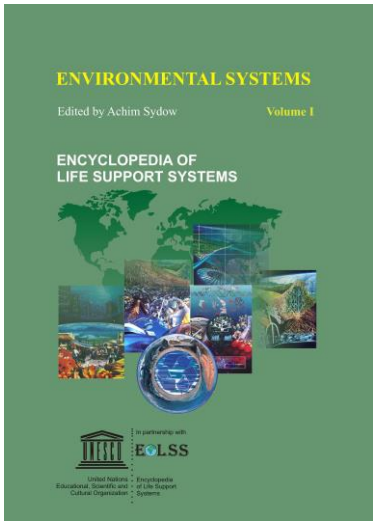
CONTENTS

ENVIRONMENTAL SYSTEMS



Environmental Systems Volume 1
e-ISBN: 978-1-84826-210-2
ISBN : 978-1-84826-660-5
No. of Pages: 347

Environmental Systems Volume 2
e-ISBN: 978-1-84826-211-9
ISBN : 978-1-84826-661-2
No. of Pages: 356

Environmental Systems Volume 3
e-ISBN: 978-1-84826-327-7
ISBN : 978-1-84826-777-0
No. of Pages: 412

CONTENTS

VOLUME I

Environmental Systems **1**
Achim Sydow,*National Research Center for Information Technology (GMD.FIRST), Berlin, Germany*

1. Introduction: Systems Approach to Environmental Objects
   1.1. Environmental System Conception
   1.2. Complexity of Environmental Systems
   1.3. Systems Analysis
2. Measurements: Data Capture, Validation, Interpretation
3. Modeling: Model Types, System Identification and Parameter Estimation
   3.1. Types of System Models
4. Decision Support: Optimization, Multicriteria Approach, Hierarchical Optimization
   4.1. Classical Approach
   4.2. Multicriteria Conceptions
   4.3. Hierarchical Optimization
5. Applied Systems Analysis: Urban and Regional Studies and Information Systems
   5.1. DYMOS-Dynamic Models for Smog Analysis

Measurement Tools for Pollution Sources and Ambient Concentrations **32**
Christopher Koroneos, *Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*
N. Moussiopoulos, *Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*
George Roumbas,*Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*

1. Introduction
2. The Air Pollution System
3. Spectroscopic Monitoring Techniques
   3.1. Emission Spectrometry
      3.1.1. Chemiluminesence
      3.1.2. Fluorescence
      3.1.3. Flame Photometry
   3.2. Infrared Absorption Spectroscopy
      3.2.1. Multiple Pass Cells
      3.2.2. Fourier Transform Infrared Spectroscopy (FTIR)
      3.2.3. Tunable Diode Laser Spectroscopy (TDLS)
   3.3. Ultraviolet-Visible Absorption Spectrometry (UV-Vis)
      3.3.1. Differential Optical Absorption Spectrometry (DOAS)
4. Monitoring of Criteria Gaseous Pollutants in the Ambient Air
   4.1. Carbon Monoxide (CO)
      4.1.1. Non-Dispersive Infrared Spectrometry (NDIR)
      4.1.2. Gas Chromatography with Flame Ionization Detection (GC-FID)
      4.1.3. Mercury Replacement
      4.1.4. Electrochemical Sensors
   4.2. Non-Methane Hydrocarbons (NMHC)
5. Monitoring of Non-Criteria Gaseous Pollutants in the Ambient Air
   5.1. Ammonia (NH_3)
   5.2. Nitric Acid (HNO_3)
   5.3. Formaldehyde (HCHO)
   5.4. Hydroxide Radical (OH)
   5.5. Hydrogen Peroxide HO_2 and RO_2
6. Particulate Matter

6.1. Sampling and Collection Methods
6.1.1. Filter Methods
6.1.2. Gravitational and Centrifugal Sedimentation
6.1.3. Impactors
6.1.4. Electrostatic and Thermal Precipitation
6.2. Mass Measurement
6.2.1. Gravimetric Method
6.2.2. Beta Ray Attenuation
6.2.3. Piezoelectric Microbalance
6.3. Size-Measurement Devises
6.3.1. Inertial Methods
6.3.2. Optical Methods
6.3.3. Electrical Mobility Analyzers
6.3.4. Condensation Nuclei Counter and Diffusion Separators
6.4. Chemical Composition Analysis of Particulate Matter

Measurement Tools: Soil Systems **76**
J.Luster,*Swiss Federal Research Institute WSL, CH-8903 Birmensdorf, Switzerland*

1. Introduction
2. The Soil Solid Phase (Soil Matrix)
2.1. Sample Preparation and Storage
2.2. Basic Physical Description and Physical Parameters of Soil Functionality
2.2.1. Bulk and Particle Densities, Porosity
2.2.2. Soil Structure and Texture
2.2.3. Water Regime
2.2.4. Specific Surface
2.3. Total Elemental Analysis
2.3.1. Suitable Methods of Analysis for a Large Part of the Periodic Table
2.3.2. Methods for Carbon, Nitrogen and Sulfur
2.3.3. Correction for Lithogenic Background
2.4. Soil Extracts for Element Availability and Mobility
2.4.1. Soil pH
2.4.2. Easily Soluble Fractions
2.4.3. Exchangeable Ions
2.4.4. Available Elements
2.4.5. Speciation of Elements by Selective Extractions
2.5. Soil Extracts for Organic Xenobiotica
2.6. Soil Microorganisms as Biomonitors
2.6.1. Soil Microbial Biomass and Soil Respiration
2.6.2. Nitrogen Transformations and Enzyme Activities
2.6.3. Bioassays
2.6.4. Effects on Soil Microbial Populations and Communities
2.7. Chemical Structure of Soil Solid Phases and Their Interaction with Pollutants
2.7.1. Composition of the Mineral Soil
2.7.2. Soil Organic Matter (SOM)
2.7.3. Microscopic Characterization of Surfaces
2.7.4. Spectroscopy
2.7.5. Experimental Quantification of Interactions
3. Soil Solution
3.1. Laboratory Methods to Collect Soil Solution
3.2. Sample Preparation and Storage
3.3. Soil Solution Composition

Measurement Tools for Atmospheric Systems **101**
W. K. Graber, *Paul Scherrer Institute, CH-5232 Villigen-PSI, Switzerland*
M. Furger,*Paul Scherrer Institute, CH-5232 Villigen-PSI, Switzerland*

1. Introduction
2. Techniques
   2.1. Interaction of Electromagnetic Radiation with the Atmosphere
   2.2. Absorption and Emission Spectroscopy
   2.3. Interaction of Sound Waves with the Atmosphere
   2.4. Chemical Analysis
3. Measurement Tools for Meteorological Parameters
   3.1. Radiation and Refraction
   3.2. Temperature
   3.3. Humidity
   3.4. Cloud Properties
   3.5. Precipitation
   3.6. Wind
   3.7. Pressure
4. Measurement Tools for Chemical Parameters
   4.1. Gas Concentrations
      4.1.1. Oxidants
      4.1.2. Volatile Organic Compounds
      4.1.3. Nitrogen Compounds
      4.1.4. Sulfur Compounds
   4.2. Aerosols
      4.2.1. Analysis by Physical Methods
      4.2.2. Analysis by Chemical Methods
   4.3. Photochemical Reaction Rates

Measurement Tools: Water Systems (Inland Waters) 123
Wolf von Tümpling, *UFZ Centre for Environmental Research Leipzig - Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*
Walter Geller,*UFZ Centre for Environmental Research Leipzig - Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

1. Introduction
2. Field Techniques
3. Measurement Tools
   3.1. Examination and Tests on-site
      3.1.1. pH
      3.1.2. Dissolved Oxygen
      3.1.3. Turbidity
      3.1.4. Transparency
      3.1.5. Water Temperature
      3.1.6. Electrical Conductivity
      3.1.7. Redox Potential
      3.1.8. Odors
      3.1.9. Coloring
      3.1.10. Taste
   3.2. Tests in Basic Laboratories
      3.2.1. Coliform Bacteria
      3.2.2. Total Coliforms
      3.2.3. Fecal Coliforms
   3.3. Additional Tests in Intermediate Laboratories
      3.3.1. Chemical Oxygen Demand (COD)
      3.3.2. Biological Oxygen Demand after five days of Incubation (BOD5)
      3.3.3. Sodium, Potassium, Calcium, Magnesium, Iron
      3.3.4. Ammonia
      3.3.5. Sulfide
      3.3.6. Nitrite, Nitrate, Phosphate, Chloride, Fluoride, Sulfate
   3.4. Central Laboratories

3.5. Judgement and Assessment
3.6. Mathematical-statistical Judgement and Assessment

Measurement Tools: Water Systems (Oceans) **150**
Rainer Feistel, *Institut fr Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemnde, Germany*
Eberhard Hagen,*Institut fr Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemnde, Germany*

1. Introduction
2. Current Measurements for Oceans
3. Thermodynamic State Properties
4. Optical Measurements

Field Techniques: Soil Systems **164**
P. Blaser,*Swiss Federal Institute for Forest, Snow and Landscape Research CH - 8903 Birmensdorf, Switzerland*

1. Introduction
2. Field techniques to study soil formation and soil classification
3. Evaluating the impact of human activities on soil quantity, soil quality and soil functions
4. Field techniques related to study soil loss, soil functionality and soil pollution

Field Techniques for Atmospheric Systems **182**
W. K. Graber, *Paul Scherrer Institute, Villigen-PSI, Switzerland*
M. Furger,*Paul Scherrer Institute, Villigen-PSI, Switzerland*

1. Introduction
2. Conceptual Aspects of Field Campaigns and Techniques
3. Platforms
   3.1. Aircraft
   3.2. Satellites
   3.3. Balloons
   3.4. Ships and Buoys
4. Chemical Sampling Techniques
5. Flux Measurements
6. Intensive Field Studies and Long-term Monitoring Programs
7. Epilogue

Field Techniques: Inland Waters **201**
Walter Geller, *UFZ Centre for Environmental Research Leipzig–Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*
Wolf von Tuempling,*UFZ Centre for Environmental Research Leipzig–Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

1. Introduction
2. Objectives: Lakes, Rivers, and Groundwaters
3. Human Use, Anthropogenic Changes, and Threats to Inland Waters
4. Sampling, Data Assessment and Field Techniques
5. Monitoring the State and Change of Water Quality
   5.1. Groundwater Monitoring Systems
   5.2. Surface Water Monitoring Systems
6. Monitoring Surface Waters by Remote Sensing

Field Techniques: Water Systems (Oceans) **219**
Eberhard Hagen, *Institut für Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemünde, Germany*
Rainer Feistel,*Institut für Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemünde, Germany*

1. Introduction
2. Measuring Platforms
3. Vertical Profiling
4. Towed Systems and Drifters
5. Remote *in situ* Methods
6. Satellite Remote Sensing

Bioindicators **239**
M. Forstreuter,*Institute of Ecology and Biology, Technical University Berlin,Germany*

1. Introduction
2. Levels of Bioindication
3. Application of Bioindicators
   3.1. Bioindicators for Monitoring Air Contamination
   3.2. Bioindicators for Monitoring Physical, Chemical Soil Contamination
   3.3. Bioindicators for Monitoring Aquatic and Semi-terrestrial Ecosystems
   3.4. Bioindicators in Landscape Ecology
4. Conclusion

Bioindication of Ecosystems Regeneration Ability Thresholds **252**
Angela Schlutow, *OEKO-DATA Strausberg Hegermuehlenstrasse 58, D-15344 Strausberg, Germany*
Philipp Kraft,*OEKO-DATA Strausberg Hegermuehlenstrasse 58, D-15344 Strausberg, Germany*

1. Background
2. Model Concept
   2.1. Aims of the BERN Model
   2.2. Mathematical Concept
   2.3. Databases
3. Applications
   3.1. Derivation of Critical Loads and Critical Limits
   3.2. Implementation into Dynamic Models for Soil Changes
   3.3. Determination of the Current Habitat Soil Variables and Comparison with the Basic State Variables
   3.4. Determination of the Recovery Target and the Current Regeneration Potential
4. Results, Current State of the Work and Future Outlook

Index **279**

About EOLSS **285**

VOLUME II

Environmental Data and Statistics **1**
S. Heiler,*Department of Mathematics and Statistics, University of Konstanz, Germany*

1. Introduction
2. Environmental Data
   2.1. Data structures
   2.2. Statistical graphics

3. Multivariate Data
   3.1. Correlation analysis
      3.1.1. The Bravais-Pearson correlation coefficient
      3.1.2. Rank correlation
      3.1.3. Correlation matrix
      3.1.4. Multiple and partial correlation coefficient
      3.1.5. Application to heavy metals in water
   3.2. Regression
      3.2.1. Simple Linear Regression
      3.2.2. Non-parametric Regression
      3.2.3. Multiple Linear Regression
      3.2.4. Non-parametric Multiple Regression
   3.3. Principal Components and Factor Analysis
      3.3.1. Principal components analysis
      3.3.2. Factor Analysis
   3.4. Cluster analysis
   3.5. Analysis of variance
4. Time Series Analysis
   4.1. Introduction
   4.2. Trend Estimation
   4.3. Smoothing and Seasonal Estimation
   4.4. Exponential smoothing
   4.5. Stationary Stochastic Processes
   4.6. Univariate Linear Time Series Models
   4.7. Multivariate Linear Time Series Models
5. Geostatistics
   5.1. Introduction
   5.2. Homogeneous and Isotropic Random Fields
   5.3. Inhomogeneities and Anisotopes
   5.4. Space-time Models

Spatial Environmental Data **48**
Herlin I.,*Inria - BP 105, 78153 Le Chesnay Cedex, France*

1. Introduction
2. Use of Spatial Environmental Information
3. Spatial Data Geometry
4. Classification of Spatial Environmental Databases
5. Metadata for Spatial Environmental Information
   5.1. Basic Facts about Metadata
   5.2. Spatial Metadata
   5.3. Examples of Metadata Systems
6. Spatial Information Systems
7. Aerial and Satellite Images
8. An Example Study: The European THETIS Project
   8.1. Image Scenario

Non-Spatial Environmental Data **67**
K. Voigt,*GSF - National Research Center for Environment and Health, Institute of Biomathematics and Biometry, Neuherberg, Germany*

1. Proliferation of Environmental Information
2. Classification of Environmental Databases
   2.1. Definition of Environmental Data, Information, Database and Information System
   2.2. Media for Environmental Databases
      2.2.1. Online Databases and CD-ROMs

2.2.2. Internet Resources
2.3. Subject Classes for Environmental Databases
2.3.1. Classification Types for Environmental Databases
2.3.2. Fact-based Databases (FBDB)
2.3.2.1. Numeric Databases (NU)
2.3.2.2. Metadatabases (MD) / Directories of Internet Resources
2.3.2.3. Research Databases (RD)
2.3.2.4. Catalogues of Chemical Substances (CA)
2.3.3. Text-Based Databases (TBDB)
2.3.3.1. Bibliographic Databases (BI)
2.3.3.2. Full-Text Databases (FT)
2.3.4. Integrated Databases (INDB)
3. Metadatabases for Environmental Information
3.1. Development of Environmental Meta-databases
3.2. DAIN - Metadatabase of Internet Resources for Environmental Chemicals
3.3. Example of a DAIN Document
4. Environmental Information Systems and Meta-information Systems on Free Internet
4.1. Prerequisite for Information Systems
4.2. International Environmental (Meta) Information Systems
4.3. German Approaches for Environmental (Meta) Information Systems
5. Need for Analysis and Evaluation of Environmental Databases

Statistical Analyses' Design **89**
Vijay P. Singh,*Louisiana State University, U.S.A*

1. Introduction
2. Classification of Environmental Problems
3. A Sample of Environmental Problems
4. Environmental Data
5. Characteristics of Environmental Processes
6. Domains of Analyses
7. Statistical Approaches
8. Design of Statistical Analysis
9. Statistical Modelling
9.1. General Model
9.2. Data Model
9.3. Trend Analysis
9.4. Periodicity Analysis
9.5. Time Series Analysis
9.6. Extreme Value Analysis
9.7. Parameter Estimation
9.8. Goodness of Fit Tests
9.9. Sensitivity Analysis
9.10. Reliability Analysis
10. Model Selection

Biostatistics **111**
G. Welzl, *Institute of Biomathematics and Biometry, Neuherberg, Germany*
T. Faus-Kessler, *Institute of Biomathematics and Biometry, Neuherberg, Germany*
H. Scherb, *Institute of Biomathematics and Biometry, Neuherberg, Germany*
K. Voigt,*Institute of Biomathematics and Biometry, Neuherberg, Germany*

1. Introduction-Overview
1.1. Quantitative Methods—Statistics–Biostatistics
1.2. Methodological Overview
2. Analyzing Environmental–ecological Structures

2.1. Clustering—Diagrams by Rearrangement
2.1.1. General Remarks
2.1.2. Cluster Analysis and Bertin Strategies
2.1.3. Example
2.2. Ordination—Diagrams in Reduced Space
2.2.1. General Remarks
2.2.2. Principal Component Analysis
2.2.3. Example
3. Analyzing Spatio-temporal Structures
3.1. Methods for Time Series
3.1.1. General Remarks
3.1.2. Change Points
3.1.3. Example
3.2. Methods for Spatial Patterns
3.2.1. General Remarks
3.2.2. K Function for Cluster Processes—Parameter Estimation
3.2.3. Example

Data Accuracy and Validation **131**
N. B. Harmancioglu, *Department of Civil Engineering, Faculty of Engineering, Dokuz Eylul University, zmir, Turkey*
V. P. Singh, *Department of Civil Engineering, Louisiana State University, Baton Rouge, LA, USA*

1. Introduction
2. Data Requirements for Environmental Management
2.1. Types of Data Needed
2.2. Statistical Characteristics of Environmental Data
2.3. The Use of Statistics in Environmental Assessment
2.3.1. Identification of Driving Forces
2.3.2. Watershed System
2.3.3. Observed Data
2.3.4. Selection of Methods
2.3.5. Modeling Techniques
3. Environmental Data Management
3.1. Need for Data Management
3.2. Basic Elements of Data Management Systems
3.3. Shortcomings of Available Data
4. Errors (Noise) in Data
4.1. Definition of Noise
4.2. Sources of Noise
4.2.1. Conceptual Understanding of Basic Processes
4.2.2. Data Limitations
4.2.3. Sampling and Analytical Errors
4.2.4. Sources of Analytical Errors
4.3. Minimization of Noise
5. User's Interpretation of Data Accuracy
5.1. Framework
5.2. Quality of Data
5.3. Means of Interpreting Data Accuracy
5.3.1. Conceptual Tests
5.3.2. Treatment of Historical Data
5.4. Measuring the Information Content of a Data Series
5.4.1. Fisher's Information Measure
5.4.2. Entropy Measures
6. Conclusions

Environmental Models and Simulations **160**
S.E. Jørgensen,*DFH, University Park 2, 2100 Copenhagen Ø, Denmark*

1. Introduction
2. Modeling Elements
3. Models as a Management Tool
4. Briefly about the History of Modeling
5. Classification of Models
6. How Good Are Our Models?
7. Generality of Environmental Model
8. State-of-the-Art of Modeling on the Edge of the Third Millennium
9. Modeling in the Future

Types of Environmental Models **193**
R. A. Letcher, *Centre for Resource and Environmental Studies, The Australian National University, Australia*
A. J. Jakeman,*Centre for Resource and Environmental Studies, The Australian National University, Australia*

1. Introduction
2. Common Features of Environmental Systems
   2.1. Complex Nonlinear Interactions
   2.2. Heterogeneity of System Features
   2.3. Incompatible Scales
   2.4. Inaccessible or Unobservable System Processes
3. Types of Environmental Systems
   3.1. Hydrological Systems
      3.1.1. Surface Water Systems
      3.1.2. Subsurface Water Systems
      3.1.3. Coastal Systems
   3.2. Ecological Systems
      3.2.1. Agricultural Systems
      3.2.2. Wildlife Systems
   3.3. Climatic Systems
      3.3.1. Oceans
      3.3.2. Atmosphere
      3.3.3. Land Surface
4. Uses and Objectives of Environmental Models
5. Types of Models
   5.1. Empirical (or Statistical) Models
   5.2. Conceptual (or Lumped Parameter) Models
   5.3. Process- (or Physics-) Based Models
6. Modeling Environmental Systems
   6.1. Hydrological Systems
      6.1.1. Surface Water Systems
      6.1.2. Subsurface Hydrological Systems
      6.1.3. Coastal Systems
   6.2. Ecological Systems
      6.2.1. Agricultural and Pastoral Systems
      6.2.2. Wildlife Systems
   6.3. Climatic Systems
      6.3.1. Global Scale Systems
      6.3.2. Regional Scale Systems
7. Future Directions in Environmental Modeling

Case Studies of Local, Regional and Global Applications of Environmental Models **216**
Ian Moffatt,*Department of Environmental Science, University of Stirling, UK*

1. Introduction
2. Modeling the Environment
   2.1. Environment
   2.2. Models
   2.3. Scale
3. Local, Regional and Global: The IMAGE Model
   3.1. The Image Base Run
4. Policy Use of the IMAGE Model
5. Conclusion: Policy and Management Usage

Data Integration into Environmental Models and Sensitivity to Input Data **230**
San José R., *Environmental Software and Modeling Group, Computer Science School, Technical University of Madrid, Madrid, Spain*
Salas I.,*Environmental Software and Modeling Group, Computer Science School, Technical University of Madrid, Madrid, Spain*
López J.,*Environmental Software and Modeling Group, Computer Science School, Technical University of Madrid, Madrid, Spain*
González R.M.,*Department of Geophysics and Meteorology, Complutense University of Madrid, Madrid, Spain*

1. Introduction: Mathematical Modeling
2. Examples of Data's Importance in Environmental Modeling
   2.1. General Description of Air Quality Models
   2.2. The Impact of Deposition Modeling on Air Quality Modeling
   2.3. The Future Mesoscale Air Quality Systems

Identifications and Applications of Coupled Climate Models **241**
Jin-Yi Yu,*Department of Earth System Science, University of California Irvine, USA.*

1. Introduction
2. Elements of Coupled Climate Models
3. Component Models
   3.1. Statistical Type
   3.2. Simplified Physics-based Type
   3.3. Comprehensive General Circulation Type
4. Coupling Interfaces
   4.1. Atmosphere-Ocean
   4.2. Atmosphere-Land Surface
   4.3. Chemistry-atmosphere/ocean
5. Computational Aspects of Coupled Climate Models
   5.1. High-Performance Computational Tools
   5.2. Model Data Information System
6. Important Issues of Climate Model Coupling
   6.1. Mismatch of Model Grids
   6.2. Frequency of Coupling
   6.3. Climate Drift
   6.4. Spin-up Process
   6.5. Flux Correction Technique
   6.6. Centralized Coupler or Distributed Broker
   6.7. Model Modulations
7. Hierarchy of Coupled Climate Models
   7.1. Coupled Ocean-Atmosphere Climate Model
   7.2. Coupled Atmosphere-Land Surface Models
   7.3. Coupled Chemistry-atmosphere/Ocean Models

8. Applications of Coupled Climate Models
   8.1. El Nio-Southern Oscillation
   8.2. Amazon Deforestation and Sahel Desertification
   8.3. Ozone Hole Depletion
   8.4. Global Warming

Model Application for Decision Makers and Policy Evaluators **255**
Ian Moffatt,*Department of Environmental Science, University of Stirling, UK*

1. Introduction
2. The Spatial Dimension
   2.1. Geometry
      2.1.1. Absolute Space
      2.1.2. Relativistic Space
   2.2. Scales of Measurement
   2.3. Units of Measurement and Their Errors
   2.4. Spatial Size
3. The Temporal Dimension
4. The Hydrological Cycle - Stocks and Flows
   4.1. Environmental Cycles
   4.2. Modeling Part of the Hydrological Cycle
   4.3. Scaling Up and Down
5. Implications for Life Support on Earth
   5.1. Stability in a Sustainable World
   5.2. Scale, Complexity and Order in Life Support Systems
6. Conclusion

Assessing the Role of Climate in Environmental Systems Analysis and Modeling **275**
Robert J. Oglesby,*Department of Earth and Atmospheric Sciences, Purdue University, USA*

1. Brief Description of the Climate System and How it is Modeled
   1.1. Climate System Basics
   1.2. Climate Modeling Basics
      1.2.1. The Energy Balance Model (EBM)
      1.2.2. The Statistical Dynamical Model (SDM)
      1.2.3. The General Circulation Model (GCM)
      1.2.4. NCAR CSM
      1.2.5. Regional Climate Models
      1.2.6. Towards an Earth System Model
2. The Role of Climate in Environmental Modeling
3. Case Study I: Smoke From Biomass Burning
   3.1. Modeling Approach
   3.2. Direct Effect: Adding Smoke Clouds
   3.3. Indirect Effect: Decreasing Droplet Radius
4. Case Study II: Rainfall/Runoff in Climate Models
   4.1. Description of the Rainfall-ET-Runoff Model
   4.2. Fast Track Approach
   4.3. Long-Term Small Catchment Approach
   4.4. Coupling Climate Models to IHACRES: Preliminary Results
   4.5. A Comparison over the U.S. FIFE Region of Simulations from RSM, REGCM2, and MM5/CLIM

Index **291**

About EOLSS **295**

VOLUME III

Decision Support for Environmental Management **1**
Florin-Gheorghe Filip,*National Institute for R&D in Informatics, Bucharest, Romania*
Ioana Moisil,*"Lucian Blaga" University, Sibiu, Romania*

1. Introduction
2. DSS- Basic Concepts
   2.1. Decision-Making Process
      2.1.1. H. Simon's Process Framework
      2.1.2. Other Models
   2.2. History, Definitions and Classifications
   2.3. DSS Technology
   2.4. DSS Development
3. AI (Artificial Intelligence) Based Decision- Making
   3.1. Expert Systems
      3.1.1. Basic Structure
      3.1.2. Applications in Environmental Management
      3.1.3. Comparison
   3.2. Fuzzy Logic Systems Approach
   3.3. Case-Based Reasoning
   3.4. Neural Networks
4. Advanced DSS for Environmental Management
   4.1. More About Model Roles
   4.2. Numerical Models and AI Based Methods
5. Conclusions

Multi-Objective Decision Support Including Sensitivity Analysis **17**
Makowski, Marek,*International Institute for Applied Systems Analysis, Laxenburg, A-2361 Austria*

1. Introduction
2. Basic Concepts
   2.1. Modern DM
   2.2. Core Model
      2.2.1. Illustrative Examples
      2.2.2. Decision Variables
      2.2.3. External Decisions
      2.2.4. Outcome Variables
      2.2.5. Objectives
      2.2.6. Mathematical Model
   2.3. Sensitivity Analysis
3. Multi-objective Model Analysis
   3.1. Classical Methods of Model Analysis
   3.2. Aspiration-based Analysis of Efficient Solutions
   3.3. Interactive Multi-objective Model Analysis
   3.4. Analysis of Discrete Alternatives
4. Structure and Use of Model-Based DSSs
5. Advantages and Limitations of Model-Based DSS

Decision Support Systems for Environmental Problems at Different Scales **41**
Marek Makowski,*International Institute for Applied Systems Analysis, Laxenburg, A-2361 Austria*

1. Introduction
2. Regional water quality management
   2.1. The Problem

- 2.2. Model Formulation
- 2.3. Structure of the DSS
- 2.4. Experiences from using RWQM

3. Land use planning
   - 3.1. The Problem
   - 3.2. The AEZ Land Use Allocation Model
     - 3.2.1. A Summary of the AEZ Methodology
     - 3.2.2. The core model constraint set
     - 3.2.3. Decision variables
     - 3.2.4. Outcome variables
   - 3.3. DSS for Land Use Planning
   - 3.4. Experiences on using AEZWIN
4. Air quality management
   - 4.1. The problem
   - 4.2. Specification of the RAINS core model
     - 4.2.1. Notation
     - 4.2.2. Decision variables
     - 4.2.3. Outcome variables
     - 4.2.4. Constraints
   - 4.3. Model generation and data handling
   - 4.4. Analysis of the RAINS model
   - 4.5. Experiences from using RAINS
5. Lessons from the presented DSSs

Validation and Uncertainty in Analysis Decision Support **78**
Ioana Moisil,*"Lucian Blaga" University of Sibiu, Romania*

1. Introduction
2. Validation of Decision Support Systems
   - 2.1. Validation Process
   - 2.2. Validation Techniques
3. Uncertainty in Decision Support Systems
   - 3.1. Sources of Uncertainty in a DSS
     - 3.1.1. Natural Uncertainty and Variability
     - 3.1.2. Parametric/Data Uncertainty
     - 3.1.3. Model Uncertainty
     - 3.1.4. Observational Uncertainty
   - 3.2. Variety of Uncertain Information
   - 3.3. Formal Approaches to Uncertainty
     - 3.3.1. Probability Theory
     - 3.3.2. Fuzzy Set Theory
     - 3.3.3. Possibility Theory
4. Validity and Uncertainty Analysis

System to Support Decisions on Sustainable Development: Integrated Assessment **95**
Reinhard Coenen,*Forschungsznetrum Karlsruhe GmbH, ITAS- Inst. Für Technology Assessment and Systems Analysis, Germany*
Torsten Asselmeyer-Maluga,*Fraunhover Institute for Computer Architecture and Software Technology, Germany*

1. Introduction
2. Definition of Sustainable Development
3. Operationalization of the Concept of Sustainable Development
4. Sustainability Indicators as a Further Step in Operationalizing Sustainable Development
5. Sustainable Global Development - The Integrative Concept
6. Decision Support System - General Aspects

7. Information Technology and Environmental Systems

Knowledge Based Systems and Neural Nets **112**
R. Moreno-Díaz, *Institute of Cybernetics, University of Las Palmas de Gran Canaria, Spain*
R. Moreno-Díaz Jr.,*Institute of Cybernetics, University of Las Palmas de Gran Canaria, Spain*

1. Introduction
2. Knowledge-based Systems
   2.1. Definitions and Scope
   2.2. KBS Levels
   2.3. Knowledge Representation and Knowledge Acquisition
   2.4. Description of some KBSs
3. Neural Nets
   3.1. Formal Neural Nets
   3.2. Natural Neural Nets: Modeling
   3.3. Artificial Neural Nets

System to Support Decisions on Clean-Up of Polluted Lands **124**
P.-W. Graeber,*Department of Hydroscience, Dresden University of Technology, Germany*

1. Introduction
2. Questions on Cleanup Strategy
3. Hydrogeological Foundation
   3.1. Pumping Wells
   3.2. Plane Filtration
   3.3. One-dimensional Transport of Substances
   3.4. Multiphase Flow
4. The Rule-based Map-orientated Analysis
5. Problems of Measurement Values
   5.1. Introduction
   5.2. Possibilities of Groundwater and Soil Monitoring
   5.3. Hierarchical Closed-loop Controlling System

Systems to Support Decisions on Electric Power Generation **141**
Christopher Koroneos, *Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*
Agis M. Papadopoulos, *Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*

1. Introduction
2. Electricity Production Systems
   2.1. Fossil Fuel Power Plants
      2.1.1. Pulverized Fuel Combustion
      2.1.2. Atmospheric Fluidized Bed Combustion
      2.1.3. Combined Cycled Power Generation
         2.1.3.1. Natural Gas Fired Combined Cycles (NGCCs)
         2.1.3.2. Natural Gas Integrated Combined Cycles (NGICC)
         2.1.3.3. Natural Gas-fired Gas Turbine and Coal-fired Boilers
         2.1.3.4. Integrated Gasification Combined Cycles (IGCCs)
      2.1.4. Pressurized Fluidized Bed Combustion (PFBC)
      2.1.5. Pressurized Pulverized Combustion (PPC)
      2.1.6. Fuel Cells
   2.2. Renewable Energy Power Plants
      2.2.1. Geothermal Energy
         2.2.1.1. Hydro-thermal

2.2.1.2. Hot Dry Rock
2.2.2. Photo-voltaic Technology
2.2.2.1. Residential Photovoltaics
2.2.2.2. Utility-Scale Flat-Plate Thin Film Photovoltaics
2.2.2.3. Utility-scale Photovoltaic Concentrators
2.2.3. Solar-thermal Power
2.2.4. Wind Energy
2.2.5. Hydropower
3. Contribution of Energy Resources to World Electricity Production
4. Energy Storage, Efficiency of Production, and Waste Heat
4.1. Technological Inadequacy of Energy Storage
4.2. Inefficiency of Electricity Production
4.3. Waste Heat Management
5. Appraisal of Investments in Electricity Production Systems
6. Expansion of Production vs. Demand Side Management
7. External Cost Factors
8. Optimization of Energy Mixture in Power Generation Systems

Decision Support Systems For Energy, Traffic And Environmental Management 185
Kurt Fedra, *Environmental Software & Service Group, GmbH, Advanced Computer Applications, Austria*
Alain B. Haurie, *Management Studies (SES-HEC), Faculty of Economics and Social Sciences, University of Geneva, Switzerland*

1. Introduction
2. Spatial analysis and optimization models
3. A dynamic multi-time scale system representation of the air quality management problem
3.1. Pollution Dispersion Dynamics
3.2. Emissions Generation by Economic Activities
3.3. Emission Controls
3.4. Objectives and Constraints
3.5. The Regulator
3.6. Time scales
4. A heuristic for solving the regulators problem
4.1. A Decomposition Approach
4.2. Computing the Marginal Costs
5. A Multi-criteria Air Quality Management Model
5.1. Emission/Immission Optimization
5.2. The Discrete Multi-criteria Approach
6. Implementation
7. Discussions

Decision Support Systems for Urban and Regional Planning 208
Alexandra Carvalho,*Florida Institute of Technology, Florida, USA*

1. Introduction
2. Population Growth
2.1. Population Growth Rate
2.2. Population Migration Patterns
2.2.1. Migration Patterns due to Geographic Location
2.2.2. Migration Patterns due to the Degree of Development of the Country
3. Urbanization
3.1. Policies that Control Human Relocation and Development in Urban Areas
3.2. Sustainable Development in Coastal Areas
4. Decision Support Systems (DSS) for Regional and Urban Planning
4.1. Components of a Decision Support System
4.2. Geographic Information Systems (GIS)

4.2.1. Assessment of Environmental and Social Impacts
4.2.2. Multi Criteria Evaluation and Decision Making
4.2.3. Land Suitability Analysis
4.3. Engelen and White's Simulation Model Using Constrained Cellular Automata
4.4. Comparing Scenarios and Ranking Alternatives within a Decision Support System
5. Conclusions

Systems to Support Decisions for Urban Areas **222**
Hiroyuki Tamura,*Department of Systems and Human Science, Graduate School of Engineering Science, Osaka University, Japan*

1. Introduction
2. Environmental Impact Assessment and Multi-attribute Impact Theory
   2.1. Expected Utility Hypothesis
   2.2. Single Attribute Disutility Function
   2.3. Multi-attribute Disutility Function
   2.4. A Case Study: EIA of Road Traffic and Evaluation of Countermeasures
3. Consensus Formation and Multi-Agent Decision-making
   3.1. A Group Disutility Function for Multi-Agent Decision-making
   3.2. A Case Study: Consensus Formation Modeling for EIA of Road Traffic
4. Risk Management and Value Function under Risk
   4.1. Problem Statement of a Decision-making Problem
   4.2. Mathematical Modeling
   4.3. Numerical Results
5. Concluding Remarks

Diverse Perspectives Of Sustainability **240**
Ganti Prasada Rao, *Member, UNESCO-EOLSS Joint Committee, Abu Dhabi, UAE*

1. Introduction
2. Thermodynamics of Sustainable Development: A Natural Sciences Perspective
3. A Systems and Control Perspective of Sustainable Development
   3.1. Human Engineered System and the Natural Environment
   3.2. Weak Sustainability and Strong Sustainability
   3.3. Paradigm of Industrial Ecology for Sustainable Development
   3.4. Need for Reorganization of the Ways of Life in the Anthroposphere
   3.5. Observing the Process of Development
   3.6. Disturbances and Development
   3.7. *Development as Freedom*: Amartya Sen's Thesis
   3.8. Kant's Ethical Perspective of Freedom
4. Need for Transdisciplinary Pathways between Disciplines for a Holistic Perspective
5. Conclusion

Environmental Information Services And Computational Intelligence **264**
Kostas Karatzas, *Mechanical Engineering Department, Aristotle University of Thessaloniki, 54124 Thessaloniki, Greece*

1. Introduction
2. The Problem Domain: Urban Atmospheric Quality
3. Paving the Scene: Choose the Parameters of Interest
4. Be Informed In Advance: Operational Air Quality Forecasting
5. Computational Intelligence Methods for AQ Forecasting
6. Construction of Operational Prediction Models
   6.1. Data Preprocessing
   6.2. CI Method Selection

6.3. CI Application Example
6.3.1. Computational experimental strategy
7. Information Services for the Atmospheric Environment
7.1. Air Quality Information Systems
8. An AQ Information Service Example.
9. Quality Of Life Information Services for the Atmospheric Environment: The Future.
10. Conclusions

Numerical Flood Simulation By Depth Averaged Free Surface Flow Models 284
A. I. Delis, *Department of Sciences, Technical University of Crete, Chania, Crete, Hellas. Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Heraklion, Crete, Hellas.*
N. A. Kampanis, *Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Heraklion, Crete, Hellas.*

1. Introduction
2. Mathematical Modeling of Flood Propagation
2.1. Navier-Stokes (NS) and Related Models
2.2. Depth Averaged Models (2D Shallow Water Equations)
2.2.1. Saint-Venant (SV) Equations for Channel Flows
2.2.2. Conservative or Non-Conservative Form?
3. Numerical Modeling for Flood Propagation in Natural Topographies
3.1. Spatial Discretization Strategies for the 2D SW Equations
3.2. Numerical Flux Functions
3.2.1. Roe's Riemann Solver Numerical flux
3.2.2. HLL-Type Riemann Solver Numerical Flux
3.2.3. Higher Order Schemes with MUSCL Extrapolation
3.3. Time Integration
3.4. Bed Topography and Friction Terms Discretization
3.5. Wetting and Drying
3.6. Boundary Conditions
3.7. Topography Modeling
4. Benchmarking and Validation
4.1. Flood Event in the Toce River
4.2. The Malpasset Dam-Break
5. Concluding Remarks

An Assessment of the Vulnerability to Erosion of the Coastal Zone Due to a Potential Rise of Sea Level: The Case of the Hellenic Aegean Coast 324
G. Alexandrakis, A. Karditsa, S. Poulos, G. Ghionis, *Faculty of Geology & Geoenvironment, Department of Geography & Climatology, University of Athens, Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Hellas.*
N.A. Kampanis, *Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Hellas*

1. Introduction
2. Coastal Vulnerability Index (CVI)
3. The Aegean Sea: Physicogeographic setting.
4. Coastal Vulnerability of the Hellenic Aegean Coast.
4.1. Controlling Variables
4.1.1. Geomorphology
4.1.2. Shoreline Displacement (Erosion or Accretion)
4.1.3. Coastal Slope
4.1.4. Relative Sea Level Change
4.1.5. Offshore Wave Climate
4.1.6. Tidal Data and Sea-level Rise

4.2. Calculation of the CVI
5. Discussion and Conclusions
