

CONTENTS

DESALINATION AND WATER RESOURCES MATERIAL SELECTION AND CORROSION

Material Selection and Corrosion - Volume 1

No. of Pages: 344

ISBN: 978-1-84826-433-5 (eBook)

ISBN: 978-1-84826-883-8 (Print Volume)

Material Selection and Corrosion - Volume 2

No. of Pages: 372

ISBN: 978-1-84826-418-2 (eBook)

ISBN: 978-1-84826-868-5 (Print Volume)

CONTENTS

VOLUME I

Materials Science and Engineering	1
<i>Rees D. Rawlings, Imperial College of Science, Technology and Medicine, London, UK</i>	

1. Introduction
2. Structure of Materials
3. Defects in Crystals
 - 3.1. Sub-atomic Defects
 - 3.2. Point Defects
 - 3.3. Line Defects: Dislocations
 - 3.4. Planar Defects
 - 3.5. Large (macro) Defects
4. Processing of Materials
 - 4.1. Continuous Casting
 - 4.2. Silicon for Electronic Devices
 - 4.3. Laser Direct Casting
5. Efficient Production and use of Materials
 - 5.1. Good Design
 - 5.2. Recycling
 - 5.3. Reuse
 - 5.4. Non-destructive Testing
6. Materials in Combination
 - 6.1. Composites
 - 6.2. Coatings
 - 6.3. Functionally Graded Materials
7. Some Active Areas of Materials Development
 - 7.1. Biomaterial
 - 7.2. Smart Materials
8. Concluding Remarks

Optimization of Materials Properties	52
<i>Harvey M. Flower, Imperial College, London, UK</i>	

1. Introduction
2. Optimization through Solidification Processing
3. Optimization through Mechanical Processing
 - 3.1. Exploitation of Transformation Plasticity
4. Optimization through Heat Treatment
 - 4.1. Precipitation Hardening
5. Optimization by local Microstructural Modification
6. Final Comments

Bonding in Solids, Structural and Chemical Properties	69
<i>Robin W. Grimes, Imperial College, London, UK</i>	

1. Introduction
2. Atomic Orbitals: their Origin and their Shapes
 - 2.1. The Four Quantum Numbers
 - 2.2. The Schrödinger Equation
 - 2.2.1. Solutions to the Schrödinger Equation: The Wave Function
 - 2.2.2. Hydrogen as a Central Force Problem
 - 2.2.3. The Angular Component

- 2.2.4. Parity
- 2.2.5. The Radial Component
- 2.2.6. Energy Level Values
- 2.3. Atoms with more than One Electron
- 3. Forming Bonds between like Atoms: Bonding and Anti-bonding Molecular Orbitals, Sigma and Pi-bonds
 - 3.1. The Born-Oppenheimer Approximation
 - 3.2. The Molecular Orbital Approximation
 - 3.3. Linear Combination of Atomic Orbitals
 - 3.3.1. s Bonding Orbitals
 - 3.3.2. s Anti-bonding Orbitals
 - 3.4. The Binding Curve for H_2^+
 - 3.5. Predicting the Stability of Other Simple Molecules
 - 3.6. The Fluorine Diatomic Molecule: Another Homonuclear Molecule
 - 3.6.1. π Bonds in F_2
- 4. Forming Bonds between Unlike Atoms: Polar Covalent and Ionic Bonds, Two Extremes of the Same Process
 - 4.1. HF, a Polar Covalent Molecule
 - 4.2. NaF, an Ionic Molecule
- 5. A Simple Model for an Ionic Solid: A Balance between Coulombic Attraction and Short-range Repulsion
 - 5.1. Effective Potentials for Ionic Molecules
 - 5.1.1. The Coulomb Term
 - 5.1.2. Short-range Contributions
 - 5.2. Extending the Model to Bulk NaF
 - 5.2.1. The Madelung Constant
 - 5.2.2. The Lattice Energy and the Born–Harber Cycle
 - 5.3. Calculating the Bulk Modulus
- 6. From Hybridization to Conjugation to Band Structures: Why Diamond and Graphite have such Different Properties
 - 6.1. Carbon
 - 6.1.1. The Diamond Structure
 - 6.1.2. Graphite
 - 6.2. Hybridization and Molecular Orbitals
 - 6.2.1. The $BeCl_2$ Molecule
 - 6.2.2. Methane: CH_4 and sp^3 Hybridization
 - 6.2.3. Bonding in Diamond
 - 6.2.4. Ethene: C_2H_4 and sp^2 Hybridization
 - 6.2.5. Conjugation and Butadiene
 - 6.2.6. Extending the Model to Graphite
- 7. More about Bands: Metals, Insulators and Semiconductors
 - 7.1. Forming Bands in Metals
 - 7.2. Energy Level Distribution from a Free Electron Model
 - 7.2.1. Schrödinger Equation for a Free Electron
 - 7.2.2. Boundary Condition
 - 7.2.3. Electron Gas Pressure
 - 7.2.4. Effect of a Periodic Lattice Potential on the Free Electron Density of States
 - 7.2.5. Effect of Temperature on Electron Distribution
 - 7.3. Forming Bands in Insulators
 - 7.4. Forming Bands in Semiconductors
 - 7.4.1. Intrinsic Conductivity
 - 7.4.2. Impurity Dominated or Extrinsic Conductivity
 - 7.5. Summary
- 8. Molecular Solids, van der Waals Solids and Hydrogen Bonding
 - 8.1. Forming Solids from Molecules
 - 8.2. Molecular Interactions
 - 8.2.1. Interactions between Dipoles
 - 8.2.2. Dipole-dipole Interactions: Orientation Interaction

- 8.2.3. Dipole-induced Dipole Interactions: Induction Interaction
- 8.2.4. Induced Dipole: Dispersion Interaction
- 8.2.5. Comparison of Interaction Terms
- 8.2.6. Hydrogen Bonding
- 8.2.7. Repulsive Forces
- 9. Conclusion: How to use the Knowledge
 - 9.1. General Comments
 - 9.2. The Influence of Defects
 - 9.3. Concluding Comments

Structure and Properties of Polymers

135

Pavel Kratochvíl, *Institute of Macromolecular Chemistry, Academy of Sciences of the Czech Republic, Prague, Czech Republic*

- 1. Macromolecules and Polymers
- 2. Synthesis of Polymers
- 3. Structure of Macromolecules
- 4. Structure of Polymers
- 5. Design of Polymers with Specific Properties
- 6. Mechanical Properties of Polymers
- 7. Rheology and Viscoelasticity of Polymers
- 8. Electric and Optical Properties of Polymers
- 9. Additives
- 10. Polymer Processing
- 11. Polymers and the Environment
- 12. Methods of Polymer Characterization
- 13. Specialty Polymers
- 14. Conclusion

Mechanical Properties of Polymers

157

Anil K. Bhowmick, *Indian Institute of Technology Kharagpur, India*

- 1. Introduction to Mechanical Properties: General Considerations
- 2. Deformation Behavior of Polymers
- 3. Statistical Molecular Theories
 - 3.1. Single Polymer Chain
 - 3.2. Polymer Network
- 4. Large Deformation Theory
- 5. Finite Element Idealization
- 6. Experimental Stress-Strain Plots
 - 6.1. Stress-Strain Curves of Polymers
 - 6.2. Stress-Strain Behavior of Elastomers
 - 6.3. Stress-Strain Curves of Various Plastics
 - 6.4. Stress-Strain Behavior of Block Copolymer
 - 6.5. Stress-Elongation versus Stress-Retracton Curves
 - 6.6. Stress-Strain Plots Under Various Deformations
- 7. Dynamic Mechanical Properties
 - 7.1. General Considerations
 - 7.2. Zones of Viscoelastic Behavior
 - 7.3. Stored Energy and Dissipated Energy
 - 7.4. Equation of Motion
 - 7.5. Temperature and Frequency Effects
 - 7.6. Interpretation of Dynamic Mechanical Spectra of Polymers
 - 7.6.1. Glassy Polymers
 - 7.6.2. Crystalline Polymers
 - 7.6.3. Elastomers

8. Ultimate Stress and Ultimate Strain of Polymers

Mechanical Properties of Crystalline Materials**221**Zhongguang Wang, *Institute of Metal Research, Chinese Academy of Sciences, Shenyang, China*

1. Introduction
2. Stress-strain Curves
3. Elastic Deformation
4. Anelastic Deformation
5. Viscous Deformation
6. Geometry and Crystallography of Plastic Deformation
 - 6.1. Resolved Shear Stress and Schmid Law
 - 6.2. The Stress-strain Curve of Ductile Single Crystals
 - 6.3. Geometry of Slip
 - 6.4. Twinning
7. Plastic Deformation of Polycrystals
8. Work-hardening, Recovery and Recrystallization
9. Fracture of Metals
 - 9.1. Ductile Fracture
 - 9.2. Brittle Fracture
 - 9.3. Fracture Toughness
10. Fatigue of Metals
 - 10.1. Fatigue Life Behavior
 - 10.2. Cyclic Deformation
 - 10.3. Crack Initiation
 - 10.4. Crack Propagation
11. Creep and Creep-rupture
 - 11.1. Primary Creep
 - 11.2. Secondary Creep
 - 11.3. Tertiary Creep and Creep Rupture
12. Mechanical Properties of Ceramic Materials
 - 12.1. Mechanisms of the Deformation of Ceramic Materials
 - 12.2. The Strength of Ceramic Materials
 - 12.3. Toughening of Ceramic Materials

Phase Equilibria and Microstructure**256**Philip Nash, *Professor, Mechanical, Materials and Aerospace Engineering Department, Illinois Institute of Technology, Chicago, IL, USA*

1. Phase Equilibria
 - 1.1. Introduction
 - 1.2. Gibbs Phase Rule
 - 1.2.1. Phase
 - 1.2.2. Components
 - 1.2.3. System
 - 1.2.4. Equilibrium Relationships
 - 1.2.5. Gibbs Phase Rule
2. Phase Diagrams
 - 2.1. Binary Phase Diagrams
 - 2.2. Ternary and Higher Order Phase Diagrams
 - 2.3. Metastable Phase Equilibrium Diagrams
 - 2.4. Thermodynamic Calculation of Phase Diagrams
3. Microstructure
 - 3.1. Analysis of Microstructure
 - 3.2. Non-equilibrium Microstructures
 - 3.3. Effect of Processing on Microstructure

- 3.4. Second-phase Strengthening
- 3.5. Grain Boundaries

Recycling or Reuse of Materials **272**
 Lucas Reijnders, *IBED, University of Amsterdam, The Netherlands*

- 1. Introduction
- 2. Why Reuse or Recycle?
- 3. Current Practice
- 4. Options for Near Term Improvement
- 5. The Ultimate Goal: Recycling in a Steady State Economy

Non-Destructive Testing and Evaluation of Metals **286**
 George A. Georgiou, *Jacobi Consulting Limited, London, UK*

- 1. Introduction
- 2. Defects in Metals
 - 2.1. Defects in Parent Material
 - 2.2. Defects in Forgings
 - 2.3. Defects in Castings
 - 2.4. Defects in Welds
 - 2.5. Defects in Coatings
 - 2.6. In-Service Defects
- 3. Non-Destructive Testing Methods for Detecting Defects in Metals
 - 3.1. Parent Material and NDT
 - 3.2. Forgings and NDT
 - 3.3. Castings and NDT
 - 3.4. Welds and NDT
 - 3.5. Coatings and NDT
 - 3.6. In-Service Defects and NDT
- 4. Evaluation of Non-Destructive Testing Data
 - 4.1. Interpretation of Data
 - 4.2. Acceptance/Rejection Criteria
 - 4.3. Dealing with Defects

Index **313**

About DESWARE **319**

VOLUME II

Composite Defects and Their Detection **1**
 Robert Alan Smith, *Structural Materials Centre, QinetiQ Ltd, Cody Technology Park, Farnborough, UK*

- 1. Introduction
 - 1.1. Scope
 - 1.2. Defects in Composites
 - 1.3. Significance of Defects in Composites
 - 1.4. Detection methods
 - 1.4.1. Ultrasound
 - 1.4.2. Low-frequency Vibration Methods
- 2. Types of Defect in Composites
 - 2.1. Manufacturing Defects

- 2.2. In-service Defects
- 3. Ultrasonic Inspection Methods
 - 3.1. Basic Ultrasonics
 - 3.1.1. Ultrasound
 - 3.1.2. Interaction with Materials
 - 3.2. Choice of Frequency
 - 3.3. Defect Detection and Characterization
 - 3.3.1. Detection
 - 3.3.2. Delamination Sizing
 - 3.3.3. Measurement of Bulk Attenuation
 - 3.4. Ultrasonic Imaging Techniques
 - 3.4.1. General Imaging Principles
 - 3.4.2. Ultrasonic A-scan
 - 3.4.3. Ultrasonic B-scan
 - 3.4.4. Ultrasonic C-scan
 - 3.4.5. Ultrasonic Depth Scan
 - 3.4.6. Pseudo-3D Imaging
 - 3.5. Production Inspection Techniques
 - 3.5.1. Immersion Testing
 - 3.5.2. Ultrasonic Jet Probes
 - 3.6. In-service Inspection Techniques
 - 3.6.1. Manual Single-point Inspection
 - 3.6.2. Manual Scanning and Imaging
 - 3.6.3. Automated Scanning and Imaging
 - 3.6.4. Roller Probes
 - 3.6.5. Multi-element Array Probes
 - 3.7. Specialist Ultrasonic Techniques
 - 3.7.1. Velocity Measurement
 - 3.7.2. Full Ultrasonic Waveform Capture
 - 3.7.3. Acoustic Backscattering
 - 3.7.4. Polar Scans
 - 3.7.5. Laser Ultrasound Techniques
 - 3.7.6. Lamb Wave Propagation
- 4. Low-frequency Vibration Methods
 - 4.1. Global Assessment
 - 4.1.1. Natural Frequency Measurement
 - 4.1.2. Damping Measurements
 - 4.2. Local Assessment
 - 4.2.1. Tap Test
 - 4.2.2. The Mechanical Impedance Method
 - 4.2.3. Membrane Resonance Method
 - 4.2.4. Velocimetric and Other Pitch-catch Methods
 - 4.2.5. Choice of Local Technique
- 5. Acoustic Emission and Acousto-Ultrasonics
- 6. X-Radiography
- 7. Optical Methods
- 8. Thermal Methods
 - 8.1. Thermal Imaging
 - 8.2. Pulsed Thermography
 - 8.3. Lock-in Thermography

Corrosion Detection and Diagnosis

42

Einar Bardal, *Norwegian University of Science and Technology, Norway*
 J.M. Drugli, *SINTEF Materials Technology, Norway*

- 1. Introduction
- 2. Inspection Organization

3. Inspection, Detection and Monitoring Methods
 - 3.1. Overview
 - 3.2. Visual Inspection
 - 3.3. Radiography
 - 3.4. Ultrasonic Testing
 - 3.5. Eddy Currents
 - 3.6. Magnetic Particle Inspection (MPI)
 - 3.7. Liquid Penetrant
 - 3.8. The Electric Field Signature Method (FSM)
 - 3.9. Acoustic Emission
 - 3.10. Leak Detection
 - 3.11. Corrosion Monitoring
 - 3.12. Pigging Devices
4. Treatment and Analysis of Inspection Results
 - 4.1. Description and Evaluation of Observations and Conditions
 - 4.2. Diagnosis Based on Description of Attack and Service Conditions—Definition of Corrosion Forms
 - 4.3. Characteristic Features and Conditions of Various Corrosion Forms
 - 4.3.1. Uniform (General) Corrosion
 - 4.3.2. Galvanic (Two-metal) Corrosion
 - 4.3.3. Thermogalvanic Corrosion
 - 4.3.4. Crevice and Deposit Corrosion
 - 4.3.5. Pitting Corrosion
 - 4.3.6. Intergranular Corrosion (IC) and Exfoliation Corrosion
 - 4.3.7. Selective Corrosion (SC) (Selective Leaching)
 - 4.3.8. Erosion Corrosion
 - 4.3.9. Cavitation Corrosion
 - 4.3.10. Fretting Corrosion
 - 4.3.11. Stress Corrosion and Hydrogen Assisted Cracking
 - 4.3.12. Corrosion Fatigue
 - 4.3.13. Corrosion under some Special Environmental Conditions
 - 4.4. Further Analysis
5. From Diagnosis to Determination of Solution(s), Recommendations and Preventive Actions

Materials for Clean Energy Conversion

63

Harumi Yokokawa, *National Institute of Materials and Chemical Research, Tsukuba, Ibaraki, Japan*

1. Introduction
2. Comparison between Combustion Processes and Fuel Cells for Energy Conversion
 - 2.1. Combustion Process related to Heat Engines
 - 2.2. Principle of Fuel Cells
 - 2.3. Conversion Efficiency of Fuel Cells
 - 2.4. Use of Natural Gases
 - 2.5. Characteristic Features in Utilization of Fuel Cells
3. Materials Requirements as Electrochemical Energy Converters
 - 3.1. Electrolyte
 - 3.2. Electrodes
 - 3.3. Interconnects
 - 3.4. Comparison between PEFC and SOFC
 - 3.5. Comparison with Turbines
 - 3.6. Fabrication Technology
4. High-temperature Solid Oxide Fuel Cells
 - 4.1. Additional Important Requirements for Solid Oxide Fuel Cells
 - 4.2. How to Meet the Requirements from the Materials-science Point of View
 - 4.3. Valence Stability and Importance of Materials Thermodynamics
 - 4.4. Valence Stability of SOFC Materials
 - 4.5. Materials Behavior during Fabrication Process and under Cell Operation

5. Future Trends
 - 5.1. Fuel Flexibility and Increase of Conversion Efficiency
 - 5.2. New Materials
 - 5.3. Cost Reduction

Corrosion In Seawater - Biological Effects

86

E. Bardal, *Norwegian University of Science and Technology, Norway*

1. Introduction
2. Electrochemical Corrosion
 - 2.1. Electrochemical Corrosion of an Active Material in an Aerated Solution
 - 2.2. Behaviour of Active - Passive Materials
 - 2.3. Crevice and Deposit Corrosion
3. Biofilms, Macroorganisms and Deposits
 - 3.1. Formation and Growth of Organic Layers
 - 3.2. Formation of Inorganic Deposits
 - 3.3. Effects of Various Conditions on Film Formation
 - 3.4. Biological Content and Activity in the Biofilm
 - 3.5. Interactions between Biofilm and Calcareous Deposits under Cathodic Polarization of Stainless Steels
4. Corrosion of Different Materials - Biological Effects
 - 4.1. Galvanic Series in Seawater
 - 4.2. Structural Steels
 - 4.3. Copper and Copper Alloys
 - 4.4. Stainless Steels, Nickel-Alloys and Titanium
5. Behaviour of Corrosion-Resistant Types of Materials
 - 5.1. Introduction
 - 5.2. Corrosion Potentials
 - 5.3. Efficiency of Cathodic Reaction
 - 5.4. Anodic Properties
 - 5.5. pH Measurements
 - 5.6. Summary of Microbial Effects
 - 5.7. Some Practical Consequences of Biological Effects on Corrosion-Resistant Materials
 - 5.7.1. Exposure of Stainless Steels at Free Corrosion Potential
 - 5.7.2. Galvanic Corrosion
 - 5.7.3. Cathodic Protection
 - 5.8. Exposure in Chlorinated Seawater

Wrought Copper Base Alloys For Desalination

130

A.H. Tuthill, *Tuthill Associates, Inc Blacksburg, VA USA*

1. Corrosion Behavior in Clean Seawater
2. Corrosion Behavior in Modified Seawater
3. Corrosion Behavior in Desalination Environments
4. Effect of Welding on Corrosion Behavior
5. Experience with Copper Alloys in Desalination Plants

Cast Copper-Base Alloys For Desalination Plants

155

A.M. Shams El Din, *Water and Electricity Department, Abu Dhabi, UAE*

1. Introduction
2. Advantages and Drawbacks of Castings
3. Designation of Copper Alloys
4. Tin-Bronzes and Leaded Tin-Bronzes
5. Aluminum Bronzes

6. Cupro-Nickels

Stainless Steel For Desalination Plants**170**J.O. Olsson and S.G.E. Alfonsson, *Avesta Sheffield AB, Sweden*

1. Introduction
2. Stainless Steel
 - 2.1. General
 - 2.2. Metallurgy
 - 2.3. Steel Grades
 - 2.4. Stainless Steel Castings
 - 2.5. Mechanical Properties
 - 2.6. Physical Properties
 - 2.7. Fabrication
 - 2.7.1. Forming
 - 2.7.2. Welding
3. Corrosion
 - 3.1. General
 - 3.2. Uniform Corrosion
 - 3.3. Localized Corrosion
 - 3.3.1. Pitting Corrosion
 - 3.3.2. Crevice Corrosion
 - 3.3.3. Factors Affecting the Risk of Pitting and Crevice Corrosion
 - 3.3.4. Stress Corrosion Cracking
 - 3.4. Galvanic Corrosion and Electrochemical Protection
 - 3.4.1. Galvanic Corrosion
 - 3.4.2. Electrochemical Protection
 - 3.5. Erosion and Erosion Corrosion
 - 3.6. The Effects of Unscheduled Variables
4. Applications
 - 4.1. Multi-Stage Flash (MSF) Plants
 - 4.1.1. Flash Chambers
 - 4.1.2. Internals
 - 4.1.3. Heat Exchangers
 - 4.1.4. Vent systems
 - 4.2. Low Temperature Multiple Effect Desalination (LT-MED) Plants
 - 4.2.1. Evaporator Shell
 - 4.2.2. Internals
 - 4.2.3. Heat Exchangers
 - 4.2.4. Vent System
 - 4.3. Reverse Osmosis (RO) Plants
 - 4.3.1. High Pressure Piping
 - 4.3.2. Membrane Assemblies
 - 4.3.3. Filters

Titanium**204**K. Kitaoka, *Japan Titanium Society, Chiyoda-ku, Tokyo, Japan*

1. Introduction
2. Physical Properties of Titanium
3. Mechanical Properties of Titanium
 - 3.1. Tensile Properties
 - 3.2. Fatigue Properties
4. Corrosion Resistance of Titanium
 - 4.1. Deposit Attack
 - 4.2. Erosion-corrosion

- 4.3. Galvanic Corrosion
- 4.4. Crevice Corrosion
5. Mechanical Properties of Thin Wall Titanium Tubes
 - 5.1. Tensile Properties
 - 5.2. Hardness
 - 5.3. Flaring, Flattening and Reverse Flattening Properties
 - 5.4. Fatigue Properties under Internal Pressure
 - 5.5. Fatigue Properties of Expanded Titanium Tubes under Vibration
 - 5.6. Buckling Strength
6. Expansion of Thin Wall Titanium Tubes
 - 6.1. Method of Expansion
 - 6.2. Pull-out Strength
 - 6.3. Results of Pneumatic Test
7. Heat Transfer Properties of Thin Wall Titanium Tubes
8. Quality Control of Thin Wall Titanium Tubes
 - 8.1. Dimensional Tolerance
 - 8.2. Micro Structure
9. Application of Thin Wall Titanium Tubes
10. Economics of Light Gauge Titanium Tubes
11. Postscript

Corrosion In Multi-Stage Flash Evaporation Distillers

233

A.M. Shams El Din, *Material Testing Laboratory, W.E.D., Abu Dhabi, UAE*

1. Introduction
2. Forms of Corrosion
 - 2.1. General (Uniform) Corrosion
 - 2.2. Galvanic (Bimetallic) Corrosion
 - 2.3. Crevice Corrosion
 - 2.4. Pitting Corrosion
 - 2.5. Corrosion Cracking
 - 2.5.1. Stress Corrosion Cracking (SCC)
 - 2.5.2. Hydrogen Induced Cracking (HIC)
 - 2.5.3. Corrosion Fatigue Cracking (CFC)
 - 2.6. Intergranular Corrosion (IGC)
 - 2.7. Dealloying or Selective Leaching
 - 2.8. Flow-Induced Corrosion
 - 2.9. Corrosion in MSF Distiller
3. Corrosion of Distiller Shell
4. Corrosion of Water Boxes
5. Corrosion of Tube Plates
 - 5.1. Erosion-Corrosion
 - 5.2. Crevice Corrosion
 - 5.3. Crevice/Galvanic Corrosion
 - 5.4. Corrosion by Dealloying
6. Corrosion of Condenser Tubes
 - 6.1. Corrosion of Copper-Base Condenser Tubes
 - 6.1.1. Crevice Corrosion
 - 6.1.2. Stress-Corrosion Cracking
 - 6.1.3. Erosion-Corrosion
 - 6.1.4. Corrosion by Polluted Waters
 - 6.2. Corrosion of Stainless Steel Condenser Tubes
 - 6.3. Corrosion of Titanium Condenser Tubes
7. Corrosion of Tube Supports
8. Corrosion of Demisters
9. Corrosion of Flash Chambers
10. Corrosion of Distillate Troughs and Ducts

11. Vapor Side Corrosion
 - 11.1. Corrosion of Venting Systems by Bromine
 - 11.2. Corrosion of Condenser Tubes
12. Operation Processes Affecting Corrosion in MSF Distillers
 - 12.1. Chlorination of Seawater
 - 12.2. Ferrous Sulfate Dosing
 - 12.3. Scaling in Condenser Tubes
 - 12.4. Sponge-Ball Cleaning
 - 12.5. Acid Cleaning
 - 12.6. Distiller Outage

Pump Materials For Desalination Plants

261

B. Todd, B. Todd and Associates, UK

1. Introduction
2. General Considerations
3. Materials Behavior in Waters
 - 3.1. Corrosion
 - 3.2. Cavitation
 - 3.3. Corrosion-Fatigue
 - 3.4. Effect of Deaeration
 - 3.5. Galvanic Effects
 - 3.6. Stress Corrosion Cracking (SCC)
4. Types Of Materials Used for Pumps
 - 4.1. Copper-Base Alloys
 - 4.2. Stainless Steels
 - 4.3. Alloy Cast Irons
 - 4.4. Nickel-Base Alloys
5. Selection of Materials for Pumps
 - 5.1. Seawater Pumps
 - 5.2. Brine Recirculation and Blowdown Pumps
 - 5.3. Distillate and Condensate Pumps
 - 5.4. Reverse Osmosis - High Pressure Pumps
 - 5.5. Reverse Osmosis - Recovery Turbines
 - 5.6. Dosing Pumps
 - 5.6.1. General
 - 5.6.2. Antiscalant, Antifoam and Oxygen Scavengers
 - 5.6.3. Sulfuric Acid
6. Pumps - Other: Chlorination Pumps
7. Some Special Considerations
 - 7.1. Wear Rings
 - 7.2. Bearing Materials
8. Materials and Corrosion
9. Materials Aspects of Specific Systems And Components

Valve Materials For Desalination Plants

282

B. Todd, B. Todd and Associates, UK

1. Introduction
2. Valve Bodies
3. Valve Seats
4. Valve Stems
5. Coatings for Valves
6. Effect of Valve Design on Materials Selection
7. Conclusions

Boiler: Fireside Fouling And Corrosion

289

H. Moore, *Director of Chemistry, WED, Abu Dhabi, UAE*

1. Introduction
2. High Temperature Corrosion
 - 2.1. Coal Fired Installations
 - 2.1.1. Furnace Wall Corrosion
 - 2.1.2. Superheater and Reheater Corrosion
 - 2.1.3. Gas Temperatures and Metal Composition
 - 2.1.4. Operational Observations
 - 2.1.5. Other Causes of Metal Loss
 - 2.1.6. Summary
 - 2.2. Oil fired Installations
3. Management of Fouling and Corrosion
 - 3.1. Operational Solutions
 - 3.1.1. Coal Installations
 - 3.1.1.1. Reducing the Chlorine Content of the Coal
 - 3.1.2. High Heat Fluxes
 - 3.1.3. Furnace Wall Gas measurements
 - 3.1.4. Milling and Classification
 - 3.1.5. Control of High Temperatures
 - 3.1.6. Oil Firing Installations
 - 3.2. Material Solution
 - 3.2.1. Coal Fired Installations
 - 3.2.1.1. Furnace Wall Tubes
 - 3.2.1.2. Superheater and Reheater Tubes
 - 3.2.2. Oil Firing
 - 3.2.2.1. Superheater and Reheater Sections
4. Low Temperature Corrosion
 - 4.1. Material Solutions

Power And Desalination Chemistry

302

H. Moore, *Director of Chemistry, WED, Abu Dhabi, UAE*

1. Introduction
2. Boiler Corrosion
 - 2.1. Protective Oxides and Corrosion
 - 2.2. Achieving Concentrated and Aggressive Environments
3. Chemical Conditioning to Avoid Corrosion
 - 3.1. Boiler Water Conditioning
 - 3.2. Feed System Conditioning
4. Corrosion and Scale Prevention
 - 4.1. Historical Survey
 - 4.1.1. Pre-1900
 - 4.1.2. 1900-1925
 - 4.1.3. 1925-1940
 - 4.1.4. 1940-1950
 - 4.1.5. 1950-1960
 - 4.1.6. 1960-1975
 - 4.2. Development of Chemical Standards and Treatments
 - 4.3. Boiler Water Conditioning
 - 4.3.1. Phosphate Treatment
 - 4.3.2. Caustic Soda Treatment
 - 4.3.3. Volatile Alkali Treatment (VAT)
 - 4.4. Steam and Feed Conditioning
 - 4.4.1. Summary
 - 4.5. Steam-Side Corrosion and Deposition

- 4.5.1. Steam Purity
- 4.5.2. Physical Volatility
- 4.5.3. Mechanical Carry-over
- 4.5.4. Steam Solubility
- 4.5.5. Steam Sampling and Analysis
- 5. Management of Power and Desalination Chemistry
 - 5.1. Introduction
 - 5.2. Commissioning
 - 5.2.1. Water Treatment Plant (WTP)
 - 5.2.2. Chemical Dosing Equipment
 - 5.2.3. Low Pressure (LP) Dosing
 - 5.2.4. High Pressure (HP) Dosing
 - 5.3. Boiler Chemical Cleaning
 - 5.3.1. Objectives
 - 5.3.2. Preliminary Operational Checks
 - 5.3.3. Summary of Chemical Control for Drum-Type boilers
 - 5.3.4. Summary of Boiler Water Control
 - 5.3.4.1. Alkalinity
 - 5.3.4.2. Chloride
 - 5.3.4.3. Silica
 - 5.3.5. Summary of Feed Water Chemical Control
 - 5.3.5.1. Dissolved Oxygen
 - 5.3.5.2. Hydrazine
 - 5.3.5.3. Ammonia
 - 5.3.5.4. pH
 - 5.3.5.5. Total Metal Pick up
 - 5.3.6. Summary of Total Boiler and Feed System Control
 - 5.4. Monitoring for Chemical Control
 - 5.4.1. Manual Monitoring
 - 5.4.1.1. Boiler, Steam and Feed Water Cycle
 - 5.4.1.2. Condensate Samples
 - 5.4.1.3. Feed Water Samples
 - 5.4.1.4. Sample Location and Analytical Measurements
 - 5.4.1.5. The Disadvantages of Manual Sampling and Analysis
 - 5.4.2. Continuous Monitoring
 - 5.4.2.1. Commissioning of On Line Systems
 - 5.4.2.2. "Built in" Accuracy Checking
 - 5.4.3. Chemical Control by Conductivity
 - 5.4.4. Summary of Boiler/Steam/Feed Chemical Control
