

CONTENTS

FRESH SURFACE WATER

Fresh Surface Water - Volume 1

No. of Pages: 482

ISBN: 978-1-84826-011-5 (eBook)

ISBN: 978-1-84826-461-8 (Print Volume)

Fresh Surface Water - Volume 2

No. of Pages: 340

ISBN: 978-1-84826-012-2 (eBook)

ISBN: 978-1-84826-462-5 (Print Volume)

Fresh Surface Water - Volume 3

No. of Pages: 328

ISBN: 978-1-84826-013-9 (eBook)

ISBN: 978-1-84826-463-2 (Print Volume)

CONTENTS

VOLUME I

Fresh Surface Water	1
<i>James C.I. Dooge, Center for Water Resources Research, University College Dublin, Ireland</i>	
1. Introduction	
2. Liquid Water on Planet Earth	
2.1. Occurrence of Liquid Water	
2.2. Concepts of the Water Cycle	
2.3. Anomalous Properties of Liquid Water	
2.4. The Study of Water	
3. Availability of Fresh Water	
3.1. Measurements of River Flow	
3.2. Global and Continental Water Availability	
3.3. Variation Between Regions and Countries	
3.4. Traditional Methods of Water Management	
4. Water Use and the Environment	
4.1. Increases in Water Use	
4.2. Water Use and Sustainability	
4.3. International Initiatives	
4.4. Future Water Resources Management	
5. Topics on Fresh Surface Water	
5.1. Regional Distribution of Available Fresh Water	
5.2. Characteristics of River Systems	
5.3. Transport Processes in Rivers	
5.4. River Ecosystems	
5.5. Uses and Impact of River Water	
Origin, Resources and Distribution of Rivers and Streams	42
<i>Igor Alekseevich Shiklomanov, Director State Hydrological Institute, St. Petersburg, Russia</i>	
1. Introduction	
2. Origin and Evolution of River Systems	
3. Factors Determining Evolution of the Contemporary Hydrographic Network and River Runoff Regime	
3.1. Climate Factors	
3.2. Factors of the Underlying Surface	
3.3. Human Activities	
4. Studies of River Systems and Renewable Water Resources	
4.1. Hydrological Network	
4.2. Methodological approaches to the assessment of dynamics of river runoff and its use	
5. River Runoff: Distribution over Area and Variations in Time	
5.1. Large river systems and natural-economic regions	
5.2. Continents	
5.3. Selected Countries	
6. Dynamics of Water Use in the World	
7. Renewable Water Resources and Water Withdrawals	
8. Conclusion	
Origin and Evolution of River Systems	80
<i>Vladimir Ivanovich Babkin, Doctor of Geographical Science, State Hydrological Institute, St. Petersburg, Russia</i>	

1. Introduction
2. Primary stage of the occurrence of river systems
3. Development of rivers in the Paleozoic
4. Change of hydrography in the Mesozoic
5. Modification of river systems in the Cenozoic
6. Water balance change of the river basins in the Mesozoic-Cenozoic
7. Features of dynamics of the hydrographic network and channel deformations
8. Hydrography and water resources of the rivers of Eurasia during the period of the last Ice Age and in the Holocene
9. Processes of the formation and development of rivers
10. Conclusion

Regional Distribution of Rivers and Streams in North and Central America

108

Igor Alekseevich Shiklomanov, *State Hydrological Institute, St. Petersburg, Russia*

1. Introduction: General Information about the Continent
2. Factors Affecting Network Development and Runoff Regime
 - 2.1. Topography, Landscape
 - 2.2. Climate
 - 2.3. Human Activity
3. Socio-Economic conditions. Hydrological Network. Regionalization of the Territory
 - 3.1. Socio-Economic Conditions
 - 3.2. Hydrological Network
 - 3.3. Regionalization of the Territory
4. Major River and Lake Systems; Streamflow Distribution and Variations
 - 4.1. The Largest River and Lake Systems
 - 4.2. Streamflow Distribution over Area; Renewable Water Resources
 - 4.3. Long-Term Runoff Variations
 - 4.4. Streamflow Distribution during a Year
5. Water Availability and Water Use
6. Conclusion

Regional Distribution of Rivers and Streams in South America

138

Vladimir Ivanovich Babkin, *State Hydrological Institute, St. Petersburg, Russia*

1. Introduction
2. Factors determining the development of the hydrographic network and the hydrological regime of rivers during the present period
 - 2.1. Relief
 - 2.2. Climate
 - 2.3. Soils and vegetation
 - 2.4. Economic activity
 - 2.4.1. Water reservoirs
 - 2.4.2. Irrigation
3. Hydrography, hydrological knowledge, river runoff, water use and water availability
 - 3.1. Rivers. Largest river systems
 - 3.2. Lakes
 - 3.3. Hydrological knowledge
 - 3.4. Natural-economic regions
 - 3.5. River runoff of the largest river basins and continental slopes
 - 3.6. River runoff of the natural-economic regions
 - 3.7. River runoff of the countries
 - 3.8. River runoff distribution over the territory
 - 3.9. Multiyear river runoff fluctuations
 - 3.10. Intra-annual river runoff distribution
 - 3.11. Water use

- 3.12. Water availability for the population
4. Conclusion

Regional Distribution of Rivers and Streams in Europe

171

Vladimir Ivanovich Babkin, *Doctor of Geographic Sciences State Hydrological Institute St. Petersburg, Russia*

1. Introduction
2. Factors determining the development of hydrographic network and hydrological river cycle at the present time.
 - 2.1. Relief
 - 2.2. Climate
 - 2.3. Soils and vegetation
 - 2.4. Economic activities
 - 2.4.1. Reservoirs
 - 2.4.2. Canals
 - 2.4.3. Land Irrigation
3. Hydrography, hydrological knowledge, river runoff, water consumption and water availability.
 - 3.1. Rivers. Large river systems
 - 3.2. Lakes
 - 3.3. Hydrological knowledge
 - 3.4. Natural-Economic Regions
 - 3.5. Runoff from large river basins, continental slopes and continent
 - 3.6. Runoff from natural-economic regions
 - 3.7. River runoff distribution over the territory
 - 3.8. Long-term river runoff variations
 - 3.9. River runoff distribution during a year
 - 3.10. Water use
 - 3.11. Water availability
4. Conclusions

Regional Distribution of Rivers and Streams in Asia

200

Igor Alekseevich Shiklomanov, *Director of State Hydrological Institute, St. Petersburg, Russia*

1. Introduction: General Information about the Continent
2. Factors, Affecting Development of the Hydrographic Network and Runoff Regime
 - 2.1. Relief, Landscapes
 - 2.2. Climate
 - 2.3. Human Activity
3. Socio-Economic Conditions. Hydrological Network and Regionalization
 - 3.1. Socio-Economic Conditions
 - 3.2. Hydrological Network
 - 3.3. Regionalization of the Territory
4. Major River and Lakes Systems; Streamflow Distribution and Variations
 - 4.1. Major River and Lake Systems
 - 4.2. Streamflow Distribution over Territory; Renewable Water Resources
 - 4.3. Long-Term Streamflow Variations
 - 4.4. Distribution of Streamflow during a Year
5. Water Use and Water Availability
6. Conclusion

Regional Distribution of Rivers and Streams in Africa

230

Igor Alekseevich Shiklomanov, *State Hydrological Institute (SHI), Russia*

1. Introduction: General Information about the Continent

2. Factors Determining Development of the Hydrographic Network and River Runoff Regime
 - 2.1. Relief
 - 2.2. Climate and Vegetation
 - 2.3. Human Activity
3. Socio-Economic Conditions. Hydrological Network; Regionalisation of the Territory
 - 3.1. Socio-Economic conditions
 - 3.2. Hydrological Network
 - 3.3. Regionalisation of the Territory
4. Major Rivers and Lakes; Streamflow Distribution and Variations
 - 4.1. Largest River and Lake Systems
 - 4.2. Distribution of Rivers and Streams and River Runoff Resources over Area; Renewable Water Resources
 - 4.3. Long-Term Variations in the River Runoff
 - 4.4. Streamflow Distribution during a Year
5. Water Use and Water Availability
6. Conclusion

Regional Distribution of Rivers and Streams in Australia and Oceania

261

Vladimir Ivanovich Babkin, *State Hydrological Institute, St. Petersburg, Russia*

1. Introduction
2. Physical-geographical characteristics. Factors determining the development of the hydrographic network and distribution of rivers
 - 2.1. General physico-geographical information
 - 2.2. Relief
 - 2.3. Climate
 - 2.4. Soils and vegetation
 - 2.5. Human activity
3. Economical characteristics. Hydrological network. Main river systems.
 - 3.1. Economical characteristics
 - 3.2. Hydrological network
 - 3.3. Largest rivers and lakes
4. River runoff distribution over the territory and in time
 - 4.1. River runoff distribution over the territory. Water resources
 - 4.2. Multiyear runoff fluctuations
 - 4.3. Intra-annual river runoff distribution
5. Use of the river runoff, water availability and water consumption
6. Conclusion

Characteristics of River Systems

289

Yutaka Takahasi, *Professor Emeritus, the University of Tokyo, United Nation University, Tokyo, Japan*

1. Introduction
2. History of relations between human societies and rivers
3. Present situation
4. Towards sustainability of river systems
5. Features of river systems
 - 5.1. River morphology and channel processes
 - 5.2. Chemical characteristics
 - 5.3. Biological characteristics
 - 5.4. Types of riverine ecosystems
 - 5.5. Biogeochemical characteristics

River Morphology and Channel Processes

299

Iware Matsuda, *College of Economics, Kanto Gakuin University, Yokohama, Japan*

1. Introduction
2. Channel Processes
 - 2.1. Erosion
 - 2.2. Transportation
 - 2.3. Sedimentation
 - 2.4. A Graded River
 - 2.5. Rejuvenation and River Terrace
 - 2.5.1. River Terrace
 - 2.5.2. Incised River
 - 2.5.3. Antecedent River
 - 2.6. River Capture
3. Drainage Patterns
 - 3.1. Drainage Basins
 - 3.1.1. Shape of Drainage Basins
 - 3.1.2. Stream order
 - 3.2. Drainage patterns
4. Channels in Alluvial Plains

Chemical Characteristics of Rivers

310

Michel Meybeck, *CNRS, University of Paris VI, France*

1. Introduction
2. Chemical characteristics and water quality
3. Natural origins pathways and levels of river borne chemicals
 - 3.1. Atmospheric inputs
 - 3.2. Lithological control and cationic contents
 - 3.3. Climate influence and ionic types
 - 3.4. Water pathways controls and soil leaching
 - 3.5. Interface and within river processes
4. Anthropogenic impacts on river chemistry
 - 4.1. Changes in sources, sinks and pathways
 - 4.2. Impact of climate change
 - 4.3. Chemical descriptions of river change syndromes
5. Spatial distribution of river quality in impacted basins: the Seine River example
6. Time variability of river water chemistry
 - 6.1. Variations with river discharge
 - 6.2. Cyclic variations
 - 6.3. Other short and mid-term variations
7. Trends in river chemistry
8. Conclusion: human responses to river quality degradation

Biological Characteristics of Rivers

333

Kazumi Tanida, *College of Integrated Arts and Sciences, Osaka Prefecture University, Japan.*

1. Introduction
2. Biota of streams and rivers
3. Autotrophic organisms
4. Microbes and protista
5. Macroinvertebrates
6. Adaptation and characteristics of aquatic insects
7. Feeding and trophic characteristics of macroinvertebrates
8. Fish
9. Habitat and habitat partitioning
10. River continuum concept
11. Ecological spiraling in running waters

Types of River Ecosystems**357**

G. van der Velde, *Department of Animal Ecology and Ecophysiology, Institute for Wetland and Water Research, Radboud University Nijmegen, The Netherlands*

R.S.E.W. Leuven, *Department of Environmental Science, Institute for Wetland and Water Research, Radboud University Nijmegen, The Netherlands*

I. Nagelkerken, *Department of Animal Ecology and Ecophysiology, Institute for Wetland and Water Research, Radboud University Nijmegen, The Netherlands*

1. Introduction
2. Characteristics of riverine ecosystems
 - 2.1. Flow
 - 2.2. Stream order
 - 2.3. Stream size
 - 2.4. Land-water interface and other characteristics
 - 2.5. Influx and retention of organic matter
 - 2.6. Natural disturbance regime
3. Four-dimensional perspective of river systems
4. Ecological river concepts
 - 4.1. Environmental gradients
 - 4.1.1. Stream zonation concept
 - 4.1.2. River continuum concept
 - 4.1.3. Riverine productivity concept
 - 4.1.4. Stream hydraulics concept
 - 4.1.5. Hyporheic corridor concept
 - 4.2. Disturbance
 - 4.2.1. Serial discontinuity concept
 - 4.2.2. Flood pulse concept
 - 4.2.3. Flow pulse concept
 - 4.2.4. Aggregated dead zone concept
 - 4.2.5. Spiraling and telescoping concept
 - 4.3. Habitat patches and ecotones
 - 4.4. Hierarchical organization of river systems
 - 4.5. Connectivity
5. Discussion and conclusions

Biogeochemical Characteristics of River Systems**390**

Norio Ogura, *Professor, Department of International Environment and Agriculture Science, Tokyo University of Agriculture and Technology, Tokyo, Japan*

Sentaro Kanki, *Graduate School of Agriculture, Tokyo University of Agriculture and Technology, Tokyo, Japan. Present address: Asia Air Survey Co. Ltd., Nagoya, Japan*

1. Introduction
2. Geochemical Approach -Mass Balance
3. Biogeochemical Approach -Metabolism and the Biogeochemical Cycles
 - 3.1. Bioaccumulation (Bioconcentration)
 - 3.2. Biodegradation
 - 3.3. Sedimentation (Settlement)
 - 3.4. Infiltration and Permeation
 - 3.5. Uptake (Absorption, Assimilation)
 - 3.6. Nitrification and Dinitrification
 - 3.7. Intake and Excretion by Fish and Aquatic Plants
 - 3.8. Attached Algae
 - 3.9. Microorganisms
 - 3.10. Major Materials in River Systems (Carbon, Nitrogen and Phosphorus)
4. Biogeochemical Characteristics Using Ecological Modeling
5. Conclusion and Future Issues

Index	409
--------------	------------

About EOLSS	415
--------------------	------------

VOLUME II

Transport Processes in River Systems	1
Włodzimierz Czernuszenko, <i>Institute of Geophysics Polish Academy of Sciences, Warsaw, Poland</i>	

1. Introduction
2. Catchments
3. Conservation Laws
4. Rivers
 - 4.1. Stream Flow Hydrograph
5. River Systems
 - 5.1. Water Supply
 - 5.2. Hydropower
6. Transport Processes
 - 6.1. Sediment Transport
 - 6.2. Transport of Pollutants
 - 6.3. Diffuse Sources of Pollution
 - 6.4. Thermal Pollution

River Flow	23
Paul A. Carling, <i>Department of Geography, Highfield, Southampton University, UK</i>	

1. Introduction
2. The Near-Bed Boundary Layer
3. Bulk flow in Straight Channels
4. Bulk Flow in Curved Channels
5. Initial Motion of Loose Bed Sediment
6. Bed-form phase existence fields
7. Suspension Dynamics
8. Transport of Bed Materials

Thermodynamics of Rivers	58
Włodzimierz Czernuszenko, <i>Institute of Geophysics Polish Academy of Sciences, Warsaw, Poland</i>	

1. Introduction
2. The basic laws and equations of thermodynamics
3. Example: mixing two rivers with different temperatures
4. Free or natural convection
5. Surface heat exchange
 - 5.1. Net Solar Radiation Flux
 - 5.2. Net Atmospheric Radiation Flux
 - 5.3. Water Surface Radiation Flux
 - 5.4. Evaporation Heat Flux
 - 5.5. Sensible (Conduction) Heat Flux
 - 5.6. Bed Conduction Flux
6. Case Study: Forced and natural thermal regime of a river
 - 6.1. Physical Model
 - 6.2. Mathematical Model
 - 6.3. Results of Numerical Simulation
 - 6.3.1. Discharge of Hot Water into a River

6.3.2. Natural Thermal Regime of a River

Constituent Transport**83**Pawel M. Rowinski, *Institute of Geophysics, Polish Academy of Sciences, Warsaw, Poland*

1. Introduction
2. Physics of constituent transport.
3. Turbulence in river flow.
4. Theories of turbulence.
5. Retardation of constituent transport
6. Mass balance in a river
7. Three-dimensional approach
8. Two-dimensional approach
9. One-dimensional approach.
10. Dead-zone model.
11. Tracer studies.
12. At the turn of millennium.

Transport of Sediments**111**Walter H. Graf, *Laboratoire de Recherches Hydrauliques, Ecole Polytechnique Fédérale, Lausanne, Switzerland*Mustafa S. Altinakar, *Laboratoire de Recherches Hydrauliques, Ecole Polytechnique Fédérale, Lausanne, Switzerland*

1. Introduction
 - 1.1. Water-Sediment Mixture
 - 1.2. Flow of a Mixture
 - 1.3. Modes of Transport (see Figure 1)
 - 1.4. Types of Problems
 - 1.5. Equations of Saint-Venant and Exner
2. Bed-Load Transport
 - 2.1. Notions
 - 2.2. Theoretical Considerations
 - 2.3. Bed-Load Relations
 - 2.4. Granulometry, Armoring
3. Suspended-Load Transport
 - 3.1. Notions
 - 3.2. Theoretical Considerations
 - 3.3. Suspended-Load Relation
4. Total-Load Transport
 - 4.1. Notions
 - 4.2. Total-Load Relations
 - 4.3. Applications of Relations
 - 4.4. Wash Load

Chemical Transport in Rivers**137**A. James, *Department of Civil Engineering, University of Newcastle upon Tyne, UK*

1. Introduction
2. Hydraulic Mechanisms
3. Physical, Chemical and Biological Transformations
4. Reactor Kinetics
5. River Models
6. Trends in River Modelling

River Ecosystems**152**Maciej Zalewski, *Department of Applied Ecology, University of Lodz, Poland*Malgorzata Lapinska, *Department of Applied Ecology, University of Lodz, Poland*Iwona Wagner-Lotkowska, *Department of Applied Ecology, University of Lodz, Poland*

1. Introduction
2. Evolution of the scientific paradigms in river ecosystem ecology
3. Ecohydrology – an integrative and interdisciplinary approach for scientific research and watershed management.
4. Cumulative impact on water resources
5. Threats for river ecosystem due to climate instability
6. Threats for river ecosystem due to inappropriate river basin management
 - 6.1. Environmental fate of pharmaceutical contamination—drugs and chemical contamination—DDT and PCBs
7. Conclusions
 - 7.1. Evolution of the scientific paradigms in river ecosystem ecology
 - 7.2. Ecohydrology-an integrative and interdisciplinary approach for scientific research and watershed management
 - 7.3. Cumulative impact on water resources
 - 7.4. Threats for river ecosystem due to climate instability
 - 7.5. Threats for river ecosystem due to inappropriate river basin management

Biogeochemical Processes in River Systems**175**Frank John Triska, *Hydrologist-Biologist, United States Geological Survey, Menlo Park, California, USA*Lambertus Wilhelmus Gerardus Higler, *ALTERRA, Wageningen, The Netherlands*

Part 1: Key biochemical processes in river systems (by F. J. Triska)

1. Introduction
2. Redox Environment
3. Carbon: Biosynthesis and Decomposition
4. Nitrogen and Phosphorus Biogeochemistry
5. Biogeochemical Processes in Anaerobic Environments
6. Hydrologic Considerations in River Biogeochemistry
7. Synthesis

Part 2: Factors affecting biogeochemical processes in rivers (by L.W.G. Higler)

1. Introduction
2. Climate and hydrology
3. Characteristics of the discharge area
4. Characteristics of the stream

Dynamics and Cycling of Materials in River Systems**196**Nic Pacini, , *Via Burali d'Aresso, Itri (LT) Italy*David Harper, *Dept Biology, University Leicester, UK*Lambertus Wilhelmus Gerardus Higler, *ALTERRA, Wageningen, The Netherlands*

1. Introduction
2. Primary sources of materials
3. Materials and the hydrological cycle
4. A discontinuous transport flux
5. Transport down the lower reaches of rivers
6. Phosphorus and Nitrogen cycles contrasted

Biology and Biodiversity of River Systems**222**Lambertus Wilhelmus Gerardus Higler, *ALTERRA, Wageningen, The Netherlands*

1. Introduction
2. Ecological characteristics along the course of running waters
3. A general faunistic zonation pattern of benthos in pristine streams

Ecotones **232**

L.W.G. Higler, *ALTERRA, AA Wageningen, The Netherlands*
 Lapinska M, *University of Lodz, Department of Applied Ecology, Poland*
 Zalewski M, *International Centre for Ecology, Polish Academy of Sciences, and University of Lodz, Department of Applied Ecology, Poland.*

1. Introduction.
2. Typology of ecotones of river ecosystem.
3. Roles of Ecotones of riverine ecosystem.
4. Vertical ecotones.
5. Longitudinal ecotones.
6. Lateral ecotones.

River Ecosystems Rehabilitation **250**

P.F.M. Verdonshot, *ALTERRA, Wageningen, The Netherlands*
 Malgorzata Lapinska, *University of Lodz, Department of Applied Ecology, Poland*
 Maciej Zalewski, *International Centre for Ecology, Polish Academy of Sciences, and University of Lodz, Department of Applied Ecology, Poland.*

1. Introduction
2. Concepts in stream restoration ecology
 - 2.1. The catchment as backbone in restoration
 - 2.2. A catchment approach acts at different scales and includes hierarchy
 - 2.3. Solutions
 - 2.4. Assessment methods
 - 2.5. Restoration potentials
 - 2.6. Key factors
 - 2.7. Human influences
3. Ecohydrology Concept—an approach for river restoration
 - 3.1. The Concept of Intermediate Restoration
 - 3.2. Application of the Model of Intermediate Restoration
 - 3.3. Restoration to pristine conditions

Index **273**

About EOLSS **279**

VOLUME III

The Uses of River Water and Impacts **1**

Jan Malan Jordaan, *Water Utilisation Division, University of Pretoria, Pretoria, South Africa*

1. Introduction
2. Historical Overview
3. Rivers as Sustainable Life Support Systems
 - 3.1. River Systems
 - 3.2. Types of River Systems
 - 3.3. Types of River Termination
 - 3.4. Inter-connections between Rivers and River Improvements

4. Uses of River Systems
 - 4.1. Examples of River System Uses
 - 4.2. Uses of River Deltas
 - 4.3. Uses of River Estuaries
 - 4.4. Uses of Artificial Canals, Channels and Waterways Joining Seas and Lake Systems
5. General Supplementary Comments
6. The Principal Categorical Uses of Water in Rivers and Streams
7. The Impacts of River Water Uses
8. Examples of the Uniqueness of River Systems
9. Review of Classical River Basin Developments
 - 9.1. Some Major River Basins in the World
 - 9.2. River-based Civilization Centers
 - 9.3. Uniqueness versus Variety
10. The Impacts of Rivers on Humanity
 - 10.1. Rivers as Sources of Livelihood
 - 10.2. The Role Played by Dutch Technology in River and Coastal Engineering
 - 10.3. Examples of Large Scale River Regulation Works
 - 10.4. Controversial Uses Made of River Water
11. Concluding Remarks Regarding the Uses and Impacts of River Water
 - 11.1. Uses
 - 11.2. Impacts
 - 11.3. Recommendations
12. More Detailed Aspects of River Water Uses and Impacts

River Navigation and Associated Structures

39

David M. Admiraal, *Department of Civil Engineering, University of Nebraska, USA*

Marcelo H. Garcia, *Department of Civil and Environmental Engineering, University of Illinois at Urbana-Champaign, USA*

1. Introduction
2. River Morphology and Sediment Transport
3. Locks and Dams
4. River Training
5. Sediment Movement Caused by Navigation Traffic
6. Species Population Impacts
7. Chemical Spills
8. The Future of Inland Navigation

Dredging in Rivers and Estuaries

56

Rudolf van den Bosch, *Chemin de la Combe, F- 34210 Aigne, France*

1. River Water and Uses
2. Control of a River
3. Navigation on a River
 - 3.1. Push-Barge Transportation for Bulk Cargo
 - 3.2. Container Push-barge Transportation
 - 3.3. Ro-Ro Transportation (Roll On, Roll Off)
 - 3.4. LASH Transport (Lighter Aboard Ship)
 - 3.5. Inland Waterway Motor Vessels
 - 3.6. Special Transport
4. General Specifications of Some Ports
5. Capital Dredging
6. Maintenance Dredging
7. Water Injection Dredging
 - 7.1. Applications for the Water Injection Method
 - 7.2. Advantages of Water Injection Dredging

- 7.3. Limitations of the Water Injection Dredging System
- 8. Environmental Dredging
 - 8.1. Prevention of Pollution
 - 8.2. Cleaning-up Dredging
 - 8.3. Under-water Disposal
 - 8.4. Confined Disposal
 - 8.5. Treatment of Contaminated Sediments
- 9. Conclusions

Sedimentation of Rivers, Reservoirs and Canals

82

K.G. Ranga Raju, *Professor of Civil Engineering, University of Roorkee, Roorkee, India*

- 1. Introduction
 - 1.1. Storage and Diversion Structures
- 2. Sediment Problems
 - 2.1. Sediment Problems Related to Canal Design
 - 2.2. Sediment Problems Related to Reservoir Design
 - 2.3. Scope of the Chapter
- 3. Estimation of Sediment Yield
- 4. Carrying Capacity of Lined Canals and Sediment Control
 - 4.1. Design of Settling Basins
- 5. Sediment Transport of Uniform Material
 - 5.1. Total Load Transport
 - 5.2. Equation for Bed Load Transport
 - 5.3. Equation for Suspended Load Transport
- 6. Transport of Non-uniform Sediments
- 7. Non-equilibrium Effects
 - 7.1. Non-equilibrium Effects in Bed Load Transport
 - 7.2. Non-equilibrium Effects in Suspended Load Transport
- 8. Conclusions

Sediment Exclusion at River Intakes

106

Helmut Schelierlein, *Obernach Hydraulics Laboratory, Obernach, Germany,*
 Felix Mitalo, *University of Dar Es Salaam, Dar Es Salaam, Tanzania*

- 1. Introduction
- 2. Sediment Transport in Rivers
- 3. River Intakes
- 4. Control of Bed Load at River Intakes
 - 4.1. Sediment Rejection
 - 4.2. Sediment Extraction
 - 4.3. Sediment Ejection
- 5. Control of Suspended Load at River Intakes
 - 5.1. Reservoir-type Settling Basins
 - 5.2. Longitudinal Settling Tanks
 - 5.3. Circular or Vortex Settling Tanks
- 6. Concluding Remarks
 - 6.1. Bed Load Control
 - 6.2. Suspended Load Control

Rivers and Human Development

117

Adebayo J. Adeloje, *School of the Built Environment, Heriot-Watt University, Edinburgh, UK*

- 1. Introduction
- 2. Rivers as Sources of Water Supply

- 2.1. Demand for Water Supply
- 2.2. Irrigation Water Demand
- 2.3. Meeting Water Demands: Analysis of River Flow Data
 - 2.3.1. Meeting Water Demands from a River: Estimating the Unregulated Yields of Rivers
 - 2.3.2. Meeting Water Demands with a Dam: Estimating the Storage Capacity of Dams
- 3. Rivers as Sinks for Wastes
- 4. Rivers as Sources of Energy
- 5. Rivers and Groundwater
- 6. Contemporary Issues in River Water Development
- 7. Conclusion

Potable Water

142

Stefano Pagliara, *Department of Civil Engineering, University of Pisa, Italy*
 D. Dazzini, *Department of Civil Engineering, University of Pisa, Italy*

- 1. Potable Water Supply
 - 1.1. Sources of Water Supply
 - 1.2. Issues on Water Resources and Supply
- 2. Urban Water Use
 - 2.1. Use of Potable Water
 - 2.2. Fluctuations in the Potable Water Demand
- 3. Wastewater Impact
 - 3.1. Urban Drainage Systems
 - 3.2. Types of Urban Wastewater
 - 3.3. Urban Wastewater Characteristics
 - 3.4. Wastewater Treatment
 - 3.5. Effluent Disposal
 - 3.5.1. The Receiving Water Bodies
 - 3.5.2. Effluent Disposal on the Ground Surface
- 4. Conclusions

Disposal of Sewage

157

Jan Malan Jordaan, *Water Utilisation Division, University of Pretoria, Pretoria, South Africa*

- 1. Introduction
- 2. Disposal Methods
- 3. Sewage Treatment
 - 3.1. Off-site or Sewer Systems
 - 3.1.1. Off-site Treatment Methods
 - 3.1.2. Water Use
 - 3.2. On-site Sanitation Systems
 - 3.2.1. Pit Latrines
 - 3.2.2. The Bucket System
 - 3.2.3. Septic Tank and French Drain
 - 3.2.4. Chemical Toilets
 - 3.2.5. Open Air Disposal
- 4. Industrial Effluent Disposal, Agricultural Run-off and Solid Waste Removal
 - 4.1. Industrial Effluents
 - 4.2. Agricultural Run-off
 - 4.3. Solid Waste Removal
- 5. Conclusions

Sustainable Industrial Water Use in Southern Germany

167

Jürgen Giesecke, *Institute of Hydraulic Engineering, University of Stuttgart, Germany*

1. Introduction
2. The Region and the River - Characteristics, Properties, Features
 - 2.1. The Middle-Neckar Region (Region Stuttgart)
 - 2.2. The River Neckar
3. Water Usage in the Middle-Neckar Region - Problems and Solutions
 - 3.1. Development using the River Neckar
 - 3.2. Waterway for Barge Transport
 - 3.3. Harnessing Hydro-electric Energy
 - 3.4. Industrial Waste Transport for Industry and Municipalities
 - 3.5. Cooling Thermal Plants with River Water
4. Flood Protection
5. Fresh Water Supply in the Middle-Neckar Region
6. Deficiencies on the Ecological Side
7. Striving for Sustainable River Water Use
 - 7.1. An Organizational and Conceptual Approach: IKoNE
 - 7.2. The Need for the Physical Infrastructure of Reservoirs
 - 7.3. Ecologically Upgrading the River Neckar
 - 7.4. Reconciling River and Riverine Areas
8. Synopsis, Lessons Learnt and Future Outlook
9. Conclusions

Water Consumption, Fisheries and Water-Related Recreational Facilities

196

Erna S. Wetzel, *Consultant, Somerset West 7120, South Africa*

1. Introduction
2. Consumptive Uses of Water
 - 2.1. Agriculture
 - 2.2. Industry
 - 2.3. Potable Water
3. Conservative Uses
 - 3.1. Transport
 - 3.2. Recreation
 - 3.3. Sport Fishing and Commercial Fisheries
4. Impacts of Consumptive Uses of Water
 - 4.1. Environmental Considerations
 - 4.2. Recreational Use of Water Supply Dams and Reservoirs
5. The Impacts of Conservative, Non-consumptive Uses
 - 5.1. Impacts of Recreational Uses
 - 5.2. Eutrophication
 - 5.3. Over-development
6. Possible Adverse Effects of the Joint Recreational and Commercial Uses of Rivers, Dams and Reservoirs
7. Preventative Measures
8. River Management and Future Water Uses
9. Historical Review of Domestic Water Supply
10. Water Supply: The Current State of Affairs
 - 10.1. Water in the New Millennium
 - 10.2. Water Resource Augmentation
 - 10.2.1. Exotic Sources
 - 10.2.2. Ground Water Sources
11. The Division of International Water by the Helsinki Rules
12. Conclusions

Human Made Lakes and Reservoirs : The Impact of Physical Alterations

212

Gabriela Friedl, *Swiss Federal Institute of Technology (ETH), Kastanienbaum, Switzerland*

Alfred Johny Wüest, *Swiss Federal Institute of Environmental Science and Technology (EAWAG), Kastanienbaum, Switzerland*

1. Introduction
2. Turning rivers into lakes
 - 2.1. Particle Trapping versus Particle Washout
 - 2.2. Reservoir Sedimentation
 - 2.3. Oxygen Depletion in Reservoirs
 - 2.4. Reservoir as Source of Methane and Metals
 - 2.5. Human Health Aspects
3. Changes downstream of dams
 - 3.1. Nutrient Depletion
 - 3.2. Changes in Nutrient Ratios
 - 3.3. Changes in Water Discharge
 - 3.4. Changes of the Temperature Regime
 - 3.5. Water Quality Degradation
 - 3.6. Changes in Sediment Transport
 - 3.7. Effect of Ecosystem Fragmentation on Migrating Fish
4. Beyond the down-rivers – a final remark

Water Science and Technology:History and Future

235

James C.I. Dooge, *Centre for Water Resources Research, University College, Dublin, Ireland*

1. Introduction
 - 1.1. The Properties of Water
 - 1.2. Scope of Water Science and Technology
 - 1.3. Selection of Topics
2. The Ancient World
 - 2.1. Water Supply and Drainage
 - 2.2. Mechanisms and Structures
 - 2.3. The Origins of Water Science
3. Medieval Europe
 - 3.1. Developments in Waterpower
 - 3.2. Inland Navigation
 - 3.3. Types of Water Use
4. The High Renaissance
 - 4.1. Progress in Hydraulic Engineering
 - 4.2. River Hydraulics
 - 4.3. The Hydrological Cycle
5. The Nineteenth Century
 - 5.1. Developments in Hydraulics and Hydrology
 - 5.2. Water and Wastewater Engineering
 - 5.3. Developments in Pumps and Turbines
6. The Twentieth Century
 - 6.1. Progress in Hydraulics
 - 6.2. Progress in Hydrology
 - 6.3. Developments in Sanitary Engineering
 - 6.4. Progress in Hydraulic Engineering
7. The Future
 - 7.1. Problems of the Future
 - 7.2. Appropriate Science and Technology
 - 7.3. Appropriate Economics and Sociology
