## MATHEMATICAL MODELS IN ECONOMICS

**Mathematical Models in Economics - Volume 1** 

No. of Pages: 542

**ISBN:** 978-1-84826-228-7 (eBook)

**ISBN**: 978-1-84826-678-0 (Print Volume)

**Mathematical Models in Economics - Volume 2** 

No. of Pages: 521

**ISBN:** 978-1-84826-229-4 (eBook)

**ISBN**: 978-1-84826-679-7 (Print Volume)

## **CONTENTS**

### **VOLUME I**

	VOLUME	
Mat	thematical Models in Economics	1
Wei	i-Bin Zhang, Ritsumeikan Asia Pacific University, Oita-ken 874-8577, Japan	
1.	Introduction  A Modern Treatment of Welres' Congred Equilibrium Theory	
2. 3.	A Modern Treatment of Walras' General Equilibrium Theory	
	A Generalization of Ricardo's Economic Theory	
4. 5	A Generalization of Malthus' Population Dynamics with Chaos	
5.	Von Thünen's Spatial Economics and a Short-Run Dynamics of Land Prices  The Permany Crowth Model and Needlessical Crowth Theory.	
6.	The Ramsey Growth Model and Neoclassical Growth Theory	
7.	Monetary Economic Growth and Business Cycles	
8.	A Growth Model with Solow's and Schumpeter's Growth Mechanism	
9.	Economic Growth with Arrow's Learning by Doing and Uzawa's Education	
10.	A Nonlinear Keynesian Economic Dynamics and Chaos	
11.	Traditional Trade Theories and the Core Trade Theorems	
12.	On Gneralization of Economic Theories	

## **Introduction to Mathematical Economics**

**78** 

i

Tonu Puu, Umea University, Sweden

- 1. Introduction
- 2. The Origins of Mathematical Economics
  - 2.1. von Thünen and Spatial Economics
  - 2.2. Cournot and Imperfect Competition
  - 2.3. Cournot, Walras, and Bertrand's Attack
  - 2.4. The Nature of Mathematical Economics
  - 2.5. The End of the 19th Century
- 3. Mid 20th Century
  - 3.1. Remaining Opposition to Mathematical Economics
  - 3.2. Topics in Allen's Mathematical Economics
    - 3.2.1. Macro-Dynamics
    - 3.2.2. Multi-Market Equilibrium
    - 3.2.3. Input Output Analysis and Linear programming
    - 3.2.4. Linearity in the Analysis of Macro-Dynamics
  - 3.3. Market Imperfections
    - 3.3.1. The Hotelling Model
    - 3.3.2. Heterogeneous Commodities
    - 3.3.3. Imperfect Competition
    - 3.3.4. Multiple Equilibria in Duopoly
    - 3.3.5. Conjectural Variations
  - 3.4. Debreu's Definition of Mathematical Economics
- 4. Econometrics
- 5. Mathematics Textbooks for Economists
  - 5.1. Calculus
    - 5.1.1. Missing Geometrical Perspective
    - 5.1.2. Calculus and Optimization
    - 5.1.3. The Correspondence Principle
    - 5.1.4. Optimization over Time and Space
    - 5.1.5. Topological Aspects of Calculus
  - 5.2. Matrix Algebra
- 6. Dynamics
  - 6.1. Growth and Business Cycle Theory
  - 6.2. Implicit Dynamics in Multi Market Equilibrium Systems

	<ul> <li>6.3. Difference Equations versus Differential Equations</li> <li>6.3.1. First Return Maps and Poincaré Sections</li> <li>6.4. Economists and Nonlinearity</li> <li>6.4.1. Obsession with Uniqueness and Optimality</li> <li>6.4.2. Optimality in Physics and Biology</li> </ul>	
7.	6.4.3. Partial Differential Equations Spatial Economics	
	7.1. Land Use Theory	
	7.2. Location Theory	
	7.3. Market Areas and Boundaries	
	<ul><li>7.4. Hexagonal Tessellations</li><li>7.5. Central Place Systems</li></ul>	
	7.6. Beckmann's General Theory of Spatial Markets	
	7.7. Hotelling's Migration Model	
	7.8. Exodus of Spatial Economics	
8.	Macroeconomics	
9.	Early Financial Economics	
	9.1. Investment Calculations	
	9.2. Portfolio Selection Theory	
	Outline of the History of Mathematics	
11.	Conclusion	
		440
	thematical Models in Input-Output Economics re Duchin, Rensselaer Polytechnic Institute, USA	118
	pert Steenge, University of Twente, The Netherlands	
1 110	ore seeinge, environmy of the memorial as	
1.	The Basic Static Input-Output Model	
	1.1. Introduction	
	1.2. Reasons for Popularity	
	1.3. Physical Model and Price Model	
	1.4. Properties of Nonnegative Matrices	
	<ul><li>1.5. The Choice of Technology</li><li>1.6. Joint Production, or Multi-Product Industries</li></ul>	
	1.7. Approaches to Analysis	
	1.7.1. Multipliers	
	1.7.2. Decomposition Analysis	
	1.7.3. Scenario Analysis	
2.	Beyond the Basic Static Model	
	2.1. Making Exogenous Variables Endogenous	
	2.2. Simplifications and Transparency	
	2.3. What is Distinctive about an Input-Output Model?	
	2.3.1. Closure for Households	
2	2.3.2. Closure for Investment  Major Model Extensions	
3.	Major Model Extensions 3.1. Environmental challenges	
	3.2. Dynamic Input-Output Models	
	3.3. Regional and Multi-Regional Input-Output Models	
	3.4. World Input-Output Models	
	3.5. A World Input-Output Model Based on Comparative Costs with Factor Constraints	
	3.6. Bilateral Trade and Geographic Interdependence	
4.	Concluding Observations	
	onomic Dynamics	151
w e	i-Bin Zhang, Ritsumeikan Asia Pacific University, Japan	
1.	Introduction	
	1.1. Differential Equations	

- 1.2. Difference Equations
- 2. Scalar Linear Equations and Their Applications to Economics
  - 2.1. Differential Equations
  - 2.2. Difference Equations
- 3. Scalar Nonlinear Equations and Their Applications to Economics
  - 3.1. Differential Equations
  - 3.2. Difference Equations
- 4. Planar Linear Equations and Their Applications to Economics
  - 4.1. Differential Equations
  - 4.2. Difference Equations
- 5. Two-dimensional Nonlinear Equations and Their Applications to Economics
  - 5.1. Differential Equations
  - 5.2. Difference Equations
- 6. Higher-Dimensional Linear Equations and Their Applications to Economics
  - 6.1. Differential Equations
  - 6.2. Difference Equations
- 7. Higher-Dimensional Nonlinear Equations And Their Applications to Economics
  - 7.1. Differential Equations
  - 7.2. Difference Equations

Econometric Methods 218

Roselyne Joyeux, Macquarie University, Australia George Milunovich, Macquarie University, Australia

- 1. Introduction
- 2. Least Squares Estimation
- 3. Maximum Likelihood
  - 3.1. Estimation
  - 3.2. Statistical Inference Using the Maximum Likelihood Approach
- 4. Generalized Method of Moments
  - 4.1. Method of Moments
  - 4.2. Generalized Method of Moments (GMM)
- 5. Other Estimation Techniques
- 6. Time Series Models and Forecasting Techniques
  - 6.1. Time Series Models: a Classification
  - 6.2. Univariate Time Series Models
  - 6.3. Multivariate Time Series Models
  - 6.4. Modeling Time-Varying Volatility
    - 6.4.1. Univariate GARCH Models
    - 6.4.2. Multivariate GARCH models
- 7. Panel Data Models
  - 7.1. Pooled Least Squares Estimation
  - 7.2. Estimation after Differencing
  - 7.3. Fixed Effects Estimation
  - 7.4. Random Effects Estimation
  - 7.5. Non-stationary Panels
- 8. Discrete and Limited Dependent Variables
  - 8.1. The Linear Probability Model (LPM)
  - 8.2. The Logit and Probit Models
  - 8.3. Modeling Count Data: The Poisson Regression Model
  - 8.4. Modeling Censored Data: Tobit Model
- 9. Conclusion

#### General Equilibrium

262

Monique Florenzano, Centre d'Economie de la Sorbonne, Université Paris 1 — Panthéon-Sorbonne, CNRS — UMR 8174

- 1. Introduction
- 2. The classical model
- 3. Existence of equilibrium
  - 3.1. Equilibrium and quasi-equilibrium of abstract economies
  - 3.2. Application to quasi-equilibrium existence for private ownership economies
  - 3.3. From quasi-equilibrium to equilibrium
- 4. Optimality properties of equilibrium
  - 4.1. Optimality, core and limit-core concepts
  - 4.2. Non-emptiness results
  - 4.3. Price-decentralization results
- 5. Uniqueness properties of equilibrium
- 6. Extensions of the classical model
  - 6.1. Extension to infinitely many commodities, to a continuum of agents
  - 6.2. Some market failures: non-convexities, public goods, incomplete markets
- 7. Concluding remarks

#### **Labour Market Analysis: Issues and Facts**

306

Arup Mitra, University of Delhi Enclave, India

- 1. Introduction
- 2. Rural Work Market
- 3. Urban Work Market
  - 3.1. Perspective
  - 3.2. Urbanization and Industrialization: Agglomeration Economies
  - 3.3. Limited Industrialization, Slums, Informal Sector Employment and Poverty
  - 3.4. Segmentation of the Labor Market
  - 3.5. Political Factors
- 4. Recollecting Main Issues

#### **Household Behavior and Family Economics**

345

Olivier Donni, Universite de Cergy-Pontoise, France

- 1. Introduction
- 2. The Behavior of Single-Person Households
  - 2.1. The Model of Goods Demands
  - 2.2. The Model of Labor Supply
  - 2.3. The Model with Domestic Production
- 3. The Behavior of Multi-Person Households
  - 3.1. Preliminary Distinctions
    - 3.1.1. Consumption and the Nature of Goods
    - 3.1.2. The Form of Preferences
    - 3.1.3. Preference Factors and Distribution Factors
    - 3.1.4. What Can Be Observed?
  - 3.2. The Unitary Approach
    - 3.2.1. The Dictatorial Model
    - 3.2.2. The Consensus Model of Samuelson
    - 3.2.3. The Rotten Kid Model of Becker
  - 3.3. Empirical Evaluation of the Unitary Approach
  - 3.4. The Strategic Approach
  - 3.5. The Collective Approach
    - 3.5.1. Characterization-Testability
    - 3.5.2. Welfare Analyses Identifiability
    - 3.5.3. Reduction of the Collective Model
  - 3.6. Bargaining, Threat Points and Outside Options
- 4. Marxist and Feminist Perspectives

Welfare Theory: History and Modern Results  Karl-Gustaf Lofgren, Umea University, SE - 901 87 Umea, Sweden  Karl-Gustaf Lofgren, Umea University, SE - 901 87 Umea, Sweden  I. Introduction  2. A Simple Walrasian General Equilibrium Model 3. Cost Benefit Analysis of Small Projects in General Equilibrium 4. The First and Second Welfare Theorem 5. Gains from Free Trade 6. Arrow's Impossibility Theorem 7. Externalities 8. Public Goods 8.1. Public Provision in the First Best: The Samuelson Rule 8.2. Distortionary Revenue Collection 8.3. Briefly on Heterogeneity and Asymmetric Information 9. More on Mechanism Design 10. National Welfare Measures in Dynamic Economies 10.1. A Basic Dynamic Model 10.2. Welfare Measurement in the First Best Social Optimum 10.3. Welfare Measurement in the Decentralized Economy 10.4. Briefly on Cost Benefit Analysis in Dynamic Models 11. Final Comments and Short Summary  Social Choice Norman J Schofield, Washington University, USA  1. Introduction 1.1. Rational Choice 1.2. The Theory of Social Choice 1.3. Restrictions on the Set of Alternatives 1.4. Structural Stability of the Core 2. Social Preference Relations 2.2. Social Preference Functions 2.3. Arrowian Impossibility Theorems 2.4. Power and Rationality 2.5. Choice Functions 3.1. Simple Binary Preferences Functions 3.2. Acyclic Voting Rules on Restricted Sets of Alternatives 4. Conclusion  Index  479			
2. A Simple Walrasian General Equilibrium Model 3. Cost Benefit Analysis of Small Projects in General Equilibrium 4. The First and Second Welfare Theorem 5. Gains from Free Trade 6. Arrow's Impossibility Theorem 7. Externalities 8. Public Goods 8. 1. Public Provision in the First Best: The Samuelson Rule 8. 2. Distortionary Revenue Collection 8. 3. Mathematical Models in Regional Economics Peter Nijkamp, Free University, The Netherlands Jacques Poot, University of Waikato, New Zealand	385

- 1. The Modeling Revolution in Economics
- 2. The Evolution of Models in Regional Economic Research
- 3. From Theory to Empirics
- 4. Trans-Disciplinary Advances in Regional Modeling
- 5. The Future of Regional-Economic Models

#### **Mathematical Models of Resource and Energy Economics**

406

Ngo Van Long, McGill University, Canada

- 1. Introduction
- 2. Non-Renewable Resources
  - 2.1. Hotelling's Rule
  - 2.2. Herfindahl's Rule
  - 2.3. Oligopoly and Strategic Considerations
  - 2.4. Optimal Tariffs on Oil
  - 2.5. Survival Issues
- 3. Renewable Resources
  - 3.1. Forestry
  - 3.2. Fishery
  - 3.3. Quality of the Environment
  - 3.4. Extinction of Animal Species Under Common Access
  - 3.5. Endogenous Population Growth and Resource Dynamics
- 4. Investment in Energy-Efficiency
- 5. Conclusion

#### **Mathematical Models in Spatial Economics**

431

Ake E Andersson, Jonkoping International Business School, Sweden
Borje Johansson, Jönköping International Business School, and Economics/CESIS, Royal Institute of Technology, Sweden

- 1. Introduction
- 2. Market Areas and Competition in Continuous Space
  - 2.1. The von Thünen Model and Land Use Planning
  - 2.2. Market Area and Competition
  - 2.3. Spatial Impossibility Theorem
- 3. The Development of Economic Models in Continuous Space
  - 3.1. The Weber Location Model
  - 3.2. Trade in a Continuous Two-dimensional Model
  - 3.3. A two-dimensional Model of Production and Trade
  - 3.4. Modeling Interdependencies in Production and Trade
- 4. Land-Use Models
  - 4.1. New Urban Economics and Residential Choice
  - 4.2. The Urban Centre as a Place of Externalities
  - 4.3. Interaction Costs and Equilibrium Solutions
- 5. Imperfect Competition, Equilibrium and Dynamics
  - 5.1. Diversity and Imperfect Competition
  - 5.2. Equilibrium Configurations with the Core-Periphery Model
- 6. Remarks about Future Research
