PHYSICAL (BIOLOGICAL) ANTHROPOLOGY

Physical (Biological) Anthropology - Volume 1

No. of Pages: 573

ISBN: 978-1-84826-226-3 (eBook)

ISBN: 978-1-84826-676-6 (Print Volume)

CONTENTS

VOLUME I

Human Evolution: A Paleoanthropological Perspective **1**

F.H. Smith, *Department of Anthropology, Loyola University Chicago, USA*

1. Introduction
2. Reconstructing Biological History: The Relationship of Humans and Apes
3. The Human Fossil Record: Basal Hominins
4. The Earliest Definite Hominins: The Australopithecines
5. Early Australopithecines as Primitive Humans
6. The Australopithecine Radiation
7. Origin and Evolution of the Genus Homo
8. Explaining Early Hominin Evolution: Controversy and the Documentation-Explanation Controversy
9. Early Homo erectus in East Africa and the Initial Radiation of Homo
10. After Homo erectus: The Middle Range of the Evolution of the Genus Homo
11. Neandertals and Late Archaics from Africa and Asia: The Hominin World before Modernity
12. The Origin of Modern Humans
13. Closing Perspective

Bioarchaeology (Anthropological Archaeology) **29**

Mario ŠLAUS, *Department of Archaeology, Croatian Academy of Sciences and Arts, Zagreb, Croatia.*

1. Introduction
 - 1.1. Definition of Bioarchaeology
 - 1.2. History of Bioarchaeology
2. Analysis of Skeletal Remains
 - 2.1. Excavation and recovery
 - 2.2. Differentiating between human and non-human remains
 - 2.3. Differentiating between archaeological and forensic remains
 - 2.4. Differentiating between antemortem, postmortem and perimortem traumas
 - 2.5. Determination of sex
 - 2.6. Determination of age at death
 - 2.6.1. Age determination in subadults
 - 2.6.2. Age determination in adults
3. Skeletal and dental markers of stress
 - 3.1. Linear enamel hypoplasia
 - 3.2. Cribra orbitalia
 - 3.3. Harris lines
4. Analyses of dental remains
 - 4.1. Caries
 - 4.2. Alveolar bone disease and antemortem tooth loss
5. Infectious disease
 - 5.1. Non-specific infectious disease
 - 5.2. Specific infectious disease
 - 5.2.1. Tuberculosis
 - 5.2.2. Leprosy
 - 5.2.3. Treponematosi
6. Trauma analysis
 - 6.1. Accidental trauma
 - 6.2. Intentional trauma
7. Osteological and dental evidence of degenerative disease and habitual activities
 - 7.1. Osteoarthritis
 - 7.2. Schmorl's nodes

- 7.3. Tooth wear due to habitual activities
- 8. Conclusion

A Model For Human Ecology	47
N. Wolański, <i>Departamento de Ecología Humana, Centro de Investigacion y de Estudios Avanzados Del IPN, Unidad Merida, Mexico</i>	
A. Siniarska, <i>Department of Human Biology, Human Ecology Unit, Cardinal Stefan Wyszyński University, Warsaw, Poland</i>	

- 1. Human ecology as a science
- 2. Human ecology, and environmental protection and nature conservation
- 3. Monitoring of the biological status of a population
- 4. Interaction and ecosystem modelling
- 5. Origin and development of human ecology
 - 5.1. Monodisciplinary human ecology
 - 5.2. Multidisciplinary human ecology
 - 5.3. Beginning of the systemic transdisciplinary stage of human ecology
- 6. Four sections of human ecology
 - 6.1. Philosophical problems of human beings and humanity related to the environment
 - 6.2. Natural, social and economic problems of human environment
 - 6.3. Environmental (ecological) problems of human biology
 - 6.4. Cultural adaptive behavior
- 7. Some contemporary research problems
- 8. University education in human ecology
- 9. Conclusions

Physiological Anthropology: Effects Of Artificial Light Environment On Humans	68
T. Katsuura, <i>Department of Design and Architecture, Faculty of Engineering, Chiba University, Japan</i>	

- 1. Introduction
- 2. Light and human
 - 2.1. Quantity of light and human
 - 2.2. Quality of light and human
 - 2.2.1. Color temperature of lighting
 - 2.2.2. Effects of quality of lighting on autonomic nerve response
 - 2.2.3. Effects of quality of lighting on central nervous response
 - 2.2.4. Effects of quality of lighting on sleep
 - 2.3. Natural environment reproducing lighting
 - 2.3.1. Arbitrarily selected color temperature variation
 - 2.3.2. Comparison between color temperature time varying lighting and constant color temperature lighting
 - 2.4. Lighting and taste sense

Growth And Development	89
R.C. Hauspie, <i>Laboratory of Anthropogenetics, Free University Brussels, Pleinlaan, Brussels, Belgium</i>	

- 1. Adolescent growth
- 2. Mathematical description of the growth process
- 3. Growth and maturation
- 4. Genetic factors
- 5. Polygenic model and heritability
- 6. Genetics of postnatal growth
- 7. Genetics of maturation
- 8. Secular trend in growth
- 9. Secular changes in adult size

10. Secular changes in tempo of growth

Anthropology of Aging

111

Zijad Durakovic, *Rebro University Hospital, Medical Faculty University of Zagreb, Croatia, Europe*
Marjeta Misigoj-Durakovic, *Department of Kinesiological Anthropology, Faculty of Kinesiology, University of Zagreb, Croatia, Europe*

1. Introduction
2. Skin and epidermal tissue
3. Supportive tissues
4. Muscle mass
5. Bones
6. Teeth and oral cavity
7. Heart and blood vessels
8. Respiratory system
9. Digestive system
10. Liver
11. Kidneys
12. Blood and blood-producing organs
13. Endocrine system
14. Immune system
15. Reproductive system
16. Central nervous system

Anthropology And Ergonomy

129

Osman Muftić, Diana Milčić, *Faculty of Mechanical Engineering and Naval Architecture, University of Zagreb, Croatia*

1. Introduction
2. Biomechanics as the one Possibility of the Physiological Anthropology
3. Biomechanical Anthropometry
 - 3.1. Method for Determination of the Segmental Masses
4. Harmonic Analysis of Anthropometrical Data
5. Measuring and Modeling Methods
6. Presentation of Different Models of Body Members
7. The Children Anthropomeasures
8. Methods of Work Analysis
 - 8.1. Introduction
9. Motion of Nucleus Pulposus
10. Virtual 3D Human Modeling and Digital Biomechanical Analysis
 - 10.1. Introduction
 - 10.2. Automatic determination of anthropometric measures
 - 10.3. 3D Digital Body Capture and Measurement System
 - 10.4. Motion Capture System
 - 10.5. Spatial positioning of a man
 - 10.6. Biomechanical models
 - 10.7. Determination method of the change abdominal pressure
 - 10.8. 3D visualization
11. Future Work and Conclusions

Applied Anthropology

174

Satish Kedia, Linda A. Bennett, *Department of Anthropology, The University of Memphis, USA*

1. Introduction
2. Creating a Subfield

- 2.1. Prior Disciplinary Status of Anthropology
- 2.2. The Basis for Contemporary Applied Anthropology
- 2.3. The Budding of a Subfield
3. Developing Careers
 - 3.1. Employers
 - 3.2. Domains
 - 3.3. Roles
4. Growing Methodologies
 - 4.1. Traditional Techniques
 - 4.2. Innovative Practices
 - 4.3. Collaboration
 - 4.4. Professional Frameworks
 - 4.5. Ethics
5. Emerging Inclinations

Forensic Anthropology

196

R. Jankauskas, *Department of Anatomy, Histology and Anthropology, Faculty of Medicine, Vilnius University, Lithuania; Institute of Forensic Medicine, Mykolas Romeris University, Lithuania*

1. Introduction
 - 1.1. Definition of Forensic Anthropology
 - 1.2. History of Forensic Anthropology
2. Identification of Skeletal Remains
 - 2.1. Human / Non-Human Remains
 - 2.2. Determination of Sex
 - 2.3. Determination of Age at Death
 - 2.3.1. Age Determination of Subadults
 - 2.3.2. Age Determination of Adults
 - 2.4. Determination of Stature and Body Build
 - 2.5. Determination of Ancestry of Skeletal Remains
 - 2.6. Identification of Individual Traits from the Skeleton
 - 2.6.1. Identification of Handedness (Lateral Asymmetry), Skeletal Loading and Skeletal Markers of Occupational Stress
 - 2.6.2. Evaluation of Antemortal Health Status
 - 2.6.3. Dental Identification
 - 2.6.4. Chemical and Stable Isotope Analysis
 - 2.6.5. Portrait Approximation
 - 2.6.6. Serology and DNA Fingerprinting
 - 2.7. Crime-scene (“Forensic”) Archaeology
 - 2.8. Forensic Anthropology in Mass Disasters
3. Identification of the living person
 - 3.1. Group identification Traits
 - 3.1.1. Determination of Age
 - 3.1.2. Sex Estimation
 - 3.2. Identification of the Individual
 - 3.2.1. Identification from Video and Photo Documents
 - 3.2.2. Determining Person’s Identity after a Long Period
4. Conclusion

DNA Forensics: A Population Genetic and Biological Anthropological Perspective

216

Ranajit Chakraborty, *Center for Genome Information, Department of Environmental Health, University of Cincinnati College of Medicine, Cincinnati, Ohio, USA.*

Ranjan Dea, *Center for Genome Information, Department of Environmental Health, University of Cincinnati College of Medicine, Cincinnati, Ohio, USA.*

1. Introduction
2. A Brief History of DNA Forensics

3. Generic Problems Handled in DNA Forensics
4. Desired Characteristics of DNA Forensic Markers
5. Present General Protocols used in DNA Forensics
6. Issues in Determining Statistical Strength of DNA Evidence
 - 6.1. Populations and Sampling Issues
 - 6.2. Conservativeness Issues
 - 6.3. Database Search Issue
 - 6.4. Source Attribution and Frequency in Relatives
7. Role of Biological Anthropology in Assessing the Statistical Strength of DNA Forensic Evidence
 - 7.1. Definition of Populations and Role of Population Substructure Effects
 - 7.2. Sampling of individuals in constructing DNA Forensic Databases
 - 7.3. Sample size of Databases and Its Consequences
 - 7.4. Use of Lineage Markers in DNA Forensics
8. Future Directions and Epilogue

Physical Anthropology and Gender Issues

246

Machteld J. Roede, *Physical anthropologist, formerly Maastricht University, Maastricht, the Netherlands*

1. Introduction
 - 1.1. Physical Anthropology
 - 1.2. Sex Differences and Sex Ratio
 - 1.3. Growth and Development
 - 1.4. Gender Issues
 - 1.5. Set-up
2. The status of females
 - 2.1. From Goddesses to Incubators.
3. Local environmental stressors for girls
 - 3.1. Sex-selective Infanticide
 - 3.2. Circumcision or Female Genital Mutilation (FGM)
4. Global constraints
 - 4.1. Nutrition
 - 4.2. Neglect and Health Care Discrimination.
 - 4.3. Domestic Duties
 - 4.4. Age at Marriage - Early Child Bearing
 - 4.5. Feminization of Poverty
 - 4.6. Labor and Labor Trafficking
 - 4.7. Sexual Exploitation and Trafficking
 - 4.8. Housing
 - 4.9. Violence
 - 4.10. Education
 - 4.11. Exercise
5. A lifelong perilous path
 - 5.1. Nature
6. Improvements and policies
 - 6.1. Infanticide
 - 6.2. Female Genital Mutilation
 - 6.3. Age at marriage - early child bearing
 - 6.4. Poverty
 - 6.5. Labor
 - 6.6. Trafficking in Girls and Women
 - 6.7. Violence
 - 6.8. Education
 - 6.9. Decision Making
 - 6.10. Human Rights
 - 6.11. World Conferences
 - 6.12. Scientists
7. Final remarks

The Biological and Evolutionist Bases of Ethic

278

Brunetto Chiarelli, *Institute of Anthropology, University of Florence, Florence, Italy*

1. Introduction
2. The Historical, Cognitive and Cultural Bases For "Global Bioethics"
3. The Self-Consciousness of Problems
4. The History of Ethical Concepts
5. The Birth of Bioethics and Its Naturalist Bases
6. From Bioethics To Global Bioethics

Human Biology within the Framework of Physical Anthropology

289

L. S. Lieberman, *Women's Research Center and Department of Sociology and Anthropology, University of Central Florida, USA.*

S. T. Lieberman, *College of Business, University of Connecticut, USA.*

1. Introduction: Theory and history of human biology
 - 1.1. Introduction
 - 1.2. History of Biological Anthropology
 - 1.3. Adaptation
 - 1.4. Maladaptation
 - 1.5. Evolutionary Theory
 - 1.6. Micro-evolutionary Forces
 - 1.7. Ecology
 - 1.8. Costs/ Economic Models
 - 1.9. Biomedical Theory
 - 1.10. Behavioral Biology
 - 1.11. Conclusion
2. Basic genetics- Mendelian & molecular genetics, mitosis & meiosis
 - 2.1. Basic Genetics
 - 2.2. Genetic Transmission
 - 2.3. Mendelian Genetics
 - 2.4. Molecular Genetics
 - 2.5. Genes Code for Proteins
 - 2.6. Medical Genetics and Human Biology
3. Population genetics- Hardy Weinberg Principle, forces of evolution
 - 3.1. Population Genetics
 - 3.2. The Hardy-Weinberg Equilibrium Principle
 - 3.3. Forces of Evolution
 - 3.4. Geographic Variation
 - 3.5. Pedigree Analysis
 - 3.6. Population Genetics in Human Biology
4. Quantitative genetics and complex traits- IQ, stature, diseases of complex origin
 - 4.1. Quantitative Genetics
 - 4.2. Polygenic Traits and Quantitative Trait Loci
 - 4.3. Continuous Variation and Polygenic Inheritance
 - 4.4. Multifactorial Traits
 - 4.5. The Intelligence Quotient Measure
 - 4.6. Polygenic Diseases
 - 4.7. Quantitative Genetics in Human Biology
5. Human Adaptation to Climate
 - 5.1. Early Naturalists
 - 5.2. Cold Adaptations
 - 5.3. Heat Adaptations
 - 5.4. Solar Radiation
 - 5.5. High-Altitude Adaptations
 - 5.6. New Directions
6. Epidemiology of Human Disease
 - 6.1. Pathogens

PHYSICAL (BIOLOGICAL) ANTHROPOLOGY

- 6.2. Classic Epidemiological Examples
- 6.3. Modes of Transmission of Infectious Diseases
- 6.4. Chronic Diseases
- 7. Human Nutritional Evolution
 - 7.1. Dietary Guidelines
 - 7.2. Physical Activity Levels
 - 7.3. Protein Requirements
 - 7.4. Dietary Modifications
 - 7.5. Lactose Intolerance
 - 7.6. Hypertension and Sodium Sensitivity
 - 7.7. Type 2 Diabetes and Thrifty Genes
 - 7.8. Consequences of Dietary Change
- 8. Human Growth and Development
 - 8.1. Growth and Development
 - 8.2. Stages of the Life Cycle
 - 8.3. Tracking Growth
 - 8.4. Prenatal Period
 - 8.5. Childhood
 - 8.6. Adolescence
 - 8.7. Growth Trends
 - 8.8. Post-Reproductive Longevity
 - 8.9. Secular Trends and the Human Life Cycle
 - 8.10. Human Life Expectancy
 - 8.11. Mortality
- 9. Demography
 - 9.1. Population Growth
 - 9.2. Population Distribution and Size
 - 9.3. Human Reproduction
 - 9.4. Reproductive technologies
- 10. Conclusions
