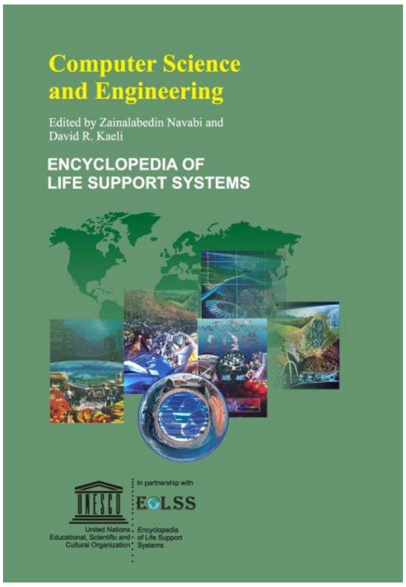
CONTENTS

COMPUTER SCIENCE AND ENGINEERING



Computer Science and Engineering - Volume 1
No. of Pages: 388
ISBN: 978-1-84826-227-0 (eBook)
ISBN: 978-1-84826-677-3 (Print Volume**)**

For more information of e-book and Print Volume(s) order, please **click here**

CONTENTS

History of Computation **1**
Sotirios G. Ziavras, *Department of Electrical and Computer Engineering, New Jersey Institute of Technology, Newark, New Jersey 07102, U.S.A.*

1. Early (Non-Electronic) Computing Machines
2. Electronic Computers
   2.1. First Generation (1945-1955)
   2.2. Second Generation (1955-1965)
   2.3. Third Generation (1965-1974)
   2.4. Fourth Generation (1974-1989)
   2.5. Fifth Generation (1990-present)

New Trends in Computer Technology **17**
Alireza S. Kaviani, *Xilinx Inc., San Jose, California, USA*

1. Introduction
2. Application Trends
   2.1. Internet Appliances
   2.2. Electronic CAD Tools
   2.3. Smart Vehicles
3. VLSI Technology Trends
   3.1. Area
   3.2. Speed
   3.3. Power
4. Architecture Trends
   4.1. VLIW Processors
   4.2. Multiprocessors
   4.3. Configurable Computing
5. Towards the End of 21st Century
   5.1. Optical Computing
   5.2. Molecular Nanotechnology
   5.3. Quantum Computing

Basic Functions and Operational Units **41**
Kevin Skadron, *Department of Computer Science, University of Virginia, USA*

1. Introduction
2. Peripherals
   2.1. Keyboards
   2.2. Monitors
   2.3. Mice and Other Pointing Devices
   2.4. Printers
   2.5. Modems
   2.6. Mass Storage
   2.7. Terminals
   2.8. Other Peripherals
   2.9. Character Codes and Endian-ness
3. Board-Level Components
   3.1. BIOS
   3.2. Main Memory
   3.3. Other Components
4. Processing Units
5. Functional Units

5.1. Fetch
5.2. Decode
5.3. Execute
5.4. Writeback
6. Concluding Remarks

Microprocessor Systems **59**
Mitchell Aaron. Thornton, *Department of Electrical and Computer Engineering, Mississippi State University, PO Box 9571, Mississippi State, MS, 39762-9571, United States.*

1. Introduction
2. System Components
2.1. Hardware Subsystem
2.1.1. Microprocessor
2.1.2. Memory
2.1.3. Input/Output Peripherals
2.2. Software Subsystem
2.2.1. Operating Systems
2.2.2. Device Drivers
2.2.3. Compilers
2.2.4. Applications
3. Microprocessor System Operation
3.1. Instruction Fetching
3.2. Instruction Execution
3.3. System Interrupts
4. Performance Evaluation
4.1. Bandwidth
4.2. Synchronous Clock Frequencies
4.3. Communication Latency
4.4. Overall System Performance
5. Common Applications of Microprocessor Systems
5.1. General Purpose Computers
5.2. Microcontrollers
5.3. Multimedia Processors

Microcontrollers **73**
Mohammad Jafar Navabi, *Medtronic Microelectronics Center, Tempe, Arizona, USA*

1. Introduction
2. Applications of Microcontrollers
3. Architecture
4. Sample Microcontrollers
5. Software
6. Hardware
6.1. Interrupt Handlers
6.2. I/O ports
6.3. Digital to Analog Converters (DAC)
6.4. Analog to Digital Converters (ADC)
6.4.1. Flash Converters
6.4.2. Successive Approximation Register (SAR)
6.4.3. Dual Slope ADC
6.4.4. Over-sampling ADC
6.5. Serial Communication Interface
6.5.1. Universal Asynchronous Receive Transmit (UART)
6.5.2. Serial Peripheral Interface (SPI)
6.5.3. I2C

6.5.4. Other serial interface standards
6.6. Timers and Clocks
6.6.1. General Purpose Timer
6.6.2. Watch Dog Timer (WDT)
6.6.3. Real Time Clock (RTC)
6.7. Memory
6.8. External Device Drivers
7. Current/Future Trends
8. Conclusion

Processors **88**
Barry Wilkinson, *Department of Computer Science, University of North Carolina at Charlotte, Charlotte, North Carolina, USA*

1. Introduction
2. Elementary Processor
3. Pipelined Processor Design
3.1. Technique
3.2. Instruction Pipeline Hazards
3.2.1. Resource Conflicts
3.2.2. Procedural Dependencies
3.2.3. Data Dependencies
3.3. Interrupt Handling
4. Superscalar Processors
4.1. General
4.2. Instruction Issue
4.3. Register Renaming

Bus Architectures **110**
Lizy Kurian John, *Electrical and Computer Engineering Department, The University of Texas at Austin,USA*

1. Introduction
2. Bus Protocols
2.1. Synchronous and Asynchronous Buses
2.2. Serial and Parallel Buses
2.3. Bus Arbitration
3. Bus Standards
3.1. Parallel Bus Architectures
3.1.1. ISA Bus
3.1.2. PCI Bus
3.1.3. VESA (Video Electronics Standard Association) Bus
3.1.4. EISA Bus (X Bus) (Extended ISA Bus)
3.1.5. MCA bus
3.1.6. PCMCIA
3.1.7. AGP Bus
3.1.8. IDE/ATA bus
3.1.9. SCSI bus
3.2. Serial Buses
3.2.1. USB
3.2.2. IEEE 1394 bus
3.3. Bridge Buses
3.3.1. North Bridge
3.3.2. South Bridge
4. Concluding Remarks

Computer Systems **132**
Sotirios G. Ziavras, *Department of Electrical and Computer Engineering, New Jersey Institute of Technology, Newark, New Jersey 07102, U.S.A.*

1. Introduction
2. Sequential/Conventional Computers
    2.1. Basic Resources
        2.1.1. Central Processing Unit
        2.1.2. Main Memory
        2.1.3. Associative Memory: Instruction and Data Caches
        2.1.4. Peripheral Devices
        2.1.5. Resource Connectivity
    2.2. Computer Performance
    2.3. Program Control
    2.4. System Software
3. Parallel Computers
    3.1. Multiprocessors
    3.2. Multicomputers
    3.3. Vector Supercomputers

Hardware Description **152**
Mehran M. Massoumi, *HDL Research & Development, Averant Inc., USA*

1. Introduction
2. A Historical Note
3. Levels of Abstraction
4. Fundamental Characteristics of a Description Language
5. Hardware Description and Concurrency
    5.1. Model of time and Simulation Cycle
    5.2. Drivers and Resolution Function
    5.3. Data Types
6. Hierarchy
    6.1. Language Primitives
7. Procedural Bodies
    7.1. Memory Modeling
    7.2. Modeling Finite State Machines
8. Parameterization
9. Delay Modeling
10. Concluding Remarks

Operating System **168**
Miroslaw Malek, *Institut fuer Informatik, Humboldt-Universitaet zu Berlin, Berlin, Germany*

1. Introduction
2. Brief History
3. Types of Operating Systems
4. Operating Systems Basics
    4.1. Program Execution
    4.2. Input/output Processing
    4.3. A Layered View
5. File Systems
    5.1. File Manipulation
    5.2. File Protection
    5.3. File Allocation
6. Scheduling
7. Memory Management

7.1. Memory Hierarchy
7.2. Virtual Storage
7.3. Protection
8. Other Problems: Concurrency, Consistency, Asynchrony, Deadlocks, Error Handling
9. Distributed Operating System and Web Computing
10. Outlook for the Future

Network Software: From Ncp To Ubiquitous Computing **191**
Vijaya R. Lakamraju, Raksit Ashok, Osman S. Unsal, and C. Andras Moritz, *Department of Electrical and Computer Engineering University of Massachusetts Amherst, MA, USA*
Vlad Vlassov, *Department of Information Technology, Royal Institute for Technology Kista, S-164 40*

1. Introduction
2. Chronological Taxonomy
3. Loosely Coupled Systems
3.1. TCP and IP
3.2. Sockets
3.3. Remote Procedure Calls
3.4. Wireless Application Protocol
4. Tightly Coupled Systems
4.1. Message Passing Interface
4.2. Active Messages and Fast Messages
4.3. OpenMP
5. Service Layers in Distributed Devices with JINI
6. Ubiquitous Computing
7. Conclusion

Machine Language **207**
David R. Kaeli, *Department of Electrical and Computer Engineering, Northeastern University, USA*

1. Introduction
2. Assembly Language
2.1. Assembler Directives
3. Binary Code
3.1. ELF
3.2. COFF
3.3. Java Class File
4. Executing Machine Language
4.1. Microcode
4.2. Control storage
4.3. Microinstruction decoding
4.4. Macroinstructions
4.5. Optimizations
5. Conclusion

Imperative Programming **218**
Gordon Pace, *Chalmers Technical University, Department of Computing Science, Sweden*
Walid Taha, *Chalmers Technical University, Department of Computing Science, Sweden*

1. Effect: The Essence of Imperative Programming
1.1. The Simplest Effects: Input/Output
2. Variables and Assignment
2.1. Declaration
2.2. Assignment
3. Control Structures
3.1. Conditionals

3.2. Iteration
4. Procedures and Functions
4.1. Procedures
4.2. Functions
4.3. Recursion
4.4. Modularity
4.5. Program Structure Through the use of Sub-Programs
5. Types, Type Systems, and Type Safety
5.1. Primitive Types, User-Defined Types, and Data Structures
5.1.1. Static Data Structures
5.1.1.1. Enumerated types
5.1.1.2. Records
5.1.1.3. Variant records
5.1.1.4. Arrays
5.1.1.5. Strings
5.1.2. Dynamic Data Structures
5.1.2.1. Pointer/access types
5.1.2.2. Memory allocation
5.1.2.3. Pointer dereferencing
5.1.2.4. Memory deallocation
6. Basic Sofware Engineering Concerns and Methods
7. Formal Reasoning About Imperative Programs
7.1. Properties of programs
7.1.1. Hoare-Floyd triples.
7.1.2. Pre- and Post-conditions.
7.1.3. Assignment
7.1.4. Sequential composition and conditionals
7.1.5. Loop invariants.
7.2. Non-Termination
8. Advanced Features of Type Systems
8.1. Sophisticated type systems
8.2. Component-based software engineering

Functional and Logic Programming **243**

Wolfgang Schreiner, *Research Institute for Symbolic Computation (RISC-Linz), Johannes Kepler University, A-4040 Linz, Austria, Wolfgang.Schreiner@risc.uni-linz.ac.at.*

1. Introduction
2. Functional Programming
2.1. Mathematical Foundations
2.2. Programming Model
2.3. Evaluation Strategies
2.4. Higher Order Functions
2.5. Parallel Execution
2.6. Type Systems
2.7. Implementation Issues
3. Logic Programming
3.1. Logical Foundations
3.2. Programming Model
3.3. Inference Strategy
3.4. Extra-Logical Features
3.5. Parallel Execution
3.5.1. Implementation Issues
4. Refinement and Convergence
4.1. Constraint Logic Programming
4.2. Functional Logic Programming
5. Impacts on Computer Science

Hardware and Software Data Security **271**
Sabrina De Capitani di Vimercati, *Dipartimento di Elettronica per l'Automazione, Universit di Brescia, 25123 Brescia–Italy*
Pierangela Samarati, *Dipartimento di Tecnologie dell'Informazione, Universit di Milano, 20163 Crema–Italy*
Sushil Jajodia, *Center for Secure Information Systems, George Mason University, Fairfax, VA 22030-4444, USA*

1. Introduction
2. Authentication
   2.1. Attacks
3. Access control
   3.1. Discretionary Access Control
      3.1.1. DAC Mechanisms
      3.1.2. Weaknesses of discretionary access control
   3.2. Mandatory Access Control
   3.3. Role-based access control
   3.4. Inference controls
4. Audit
5. Cryptography
   5.1. Basic cryptographic technologies
   5.2. Uses of cryptography
   5.3. Applications of cryptography

Computer Viruses **307**
Matt Bishop, *Department of Computer Science, University of California, Davis, CA, USA*

1. Introduction
2. What is a Computer Virus?
   2.1. Trojan Horses
   2.2. Computer Viruses
      2.2.1. Type of Targeted File
      2.2.2. Longevity
      2.2.3. Self-Concealment
      2.2.4. Type of Virus
   2.3. Related Programs
   2.4. Comparison
3. Theory of Computer Viruses
4. Protection Against Computer Viruses
   4.1. Prevention Methods
      4.1.1. Data and Instruction as Types
      4.1.2. Limiting Sharing
      4.1.3. Reducing Protection Domains
   4.2. Detection Methods
      4.2.1. Signature Analysis
      4.2.2. Integrity Checking
      4.2.3. Enforcing Specifications
      4.2.4. Anomaly Detection
5. Conclusions
