

CONTENTS

EXERGY, ENERGY SYSTEM ANALYSIS, AND OPTIMIZATION

Exergy, Energy System Analysis, and Optimization - Volume 1

No. of Pages: 292

ISBN: 978-1-84826-164-8 (eBook)

ISBN: 978-1-84826-614-8 (Print Volume)

Exergy, Energy System Analysis, and Optimization - Volume 2

No. of Pages: 454

ISBN: 978-1-84826-165-5 (eBook)

ISBN: 978-1-84826-615-5 (Print Volume)

Exergy, Energy System Analysis, and Optimization - Volume 3

No. of Pages: 438

ISBN: 978-1-84826-166-2 (eBook)

ISBN: 978-1-84826-616-2 (Print Volume)

EXERGY, ENERGY SYSTEM ANALYSIS AND OPTIMIZATION

This volume is part of the set:

Exergy, Energy System Analysis and Optimization Volume I

ISBN- 978-1-84826-164-8 (e-Book Adobe Reader)
ISBN- 978-1-84826-614-8 (Print (Full Color Edition))

- 1 Exergy and Thermodynamic Analysis**
- 1.1 Basic Exergy Concepts
- 1.2 Exergy Balance and Exergetic Efficiency
- 1.3 Exergetic Analysis of Simple Processes
- 1.4 Strengths and Limitations of Exergy Analysis
- 1.5 Energetic and Exergetic Analysis of Complex Systems
- 1.6 Graphical Exergy Analysis
- 1.7 Pinch Analysis
- 1.8 Process Integration and Improvement

Exergy, Energy System Analysis and Optimization Volume II

ISBN- 978-1-84826-165-5 (e-Book Adobe Reader)
ISBN- 978-1-84826-615-5 (Print (Full Color Edition))

- 2. Thermoeconomic Analysis**
- 2.1 The Thermodynamic Process of Cost Formation
- 2.2 Symbolic Thermoeconomic Analysis of Energy Systems
- 2.3 Structural Theory of Thermoeconomics
- 2.4 Functional Analysis
- 2.5 Cost Modeling of Energy Conversion Devices for Optimal Efficiencies
- 2.6 Application of Thermoeconomics to Operation Diagnosis of Energy Plants
- 2.7 Application of Thermoeconomics to the Design and Synthesis of Energy Plants: Approach I
- 2.8 Application of Thermoeconomics to the Design and Synthesis of Energy Plants: Approach II
- 3. Modeling, Simulation and Optimization in Energy Systems**
- 3.1 Modeling and Simulation Methods
- 3.2 Design and Off-Design Simulation of Complex Energy Systems
- 3.3 Optimization Methods for Energy Systems
- 3.4 Operation Optimization of Energy Systems
- 3.5 Design and Synthesis Optimization of Energy Systems
- 3.6 Design Optimization of Power and Cogeneration Systems
- 3.7 Electric Network Optimization
- 3.8 District Heating Network Optimization
- 3.9 Petroleum Pipeline Network Optimization

Exergy, Energy System Analysis and Optimization Volume III

ISBN- 978-1-84826-166-2 (e-Book Adobe Reader)
ISBN- 978-1-84826-616-2 (Print (Full Color Edition))

- 4. Artificial Intelligence and Expert Systems in Energy Systems Analysis**
- 4.1 AI and Energy Systems: Scope and Definitions
- 4.2 Expert Systems and Knowledge Acquisition
- 4.3 Present Applications of Artificial Intelligence to Energy Systems
- 4.4 AI in Component Design
- 4.5 AI in Process Design

- 5. Sustainability Considerations in the Modeling of Energy Systems**
- 5.1 Life-Cycle, Environmental and Social Considerations – Sustainability
- 5.2 Static and Dynamic Pollution and Resource related Indices
- 5.3 Analysis and Optimization of Energy Systems with Sustainability Considerations
- 5.4 Global Implications of the Second Law of Thermodynamics
- 5.5 National Exergy Accounting of Natural Resources
- 5.6 Global Exergy Accounting of Natural Resources

The above set is part of the Component Encyclopedia of **ENERGY SCIENCES, ENGINEERING AND TECHNOLOGY RESOURCES**, in the global *Encyclopedia of Life Support Systems (EOLSS)*, which is an integrated compendium of the following Component Encyclopedias:

1. *EARTH AND ATMOSPHERIC SCIENCES*
2. *MATHEMATICAL SCIENCES*
3. *BIOLOGICAL, PHYSIOLOGICAL AND HEALTH SCIENCES*
4. *SOCIAL SCIENCES AND HUMANITIES*
5. *PHYSICAL SCIENCES, ENGINEERING AND TECHNOLOGY RESOURCES*
6. *CHEMICAL SCIENCES ENGINEERING AND TECHNOLOGY RESOURCES*
7. *WATER SCIENCES, ENGINEERING AND TECHNOLOGY RESOURCES*
8. ***ENERGY SCIENCES, ENGINEERING AND TECHNOLOGY RESOURCES***
9. *ENVIRONMENTAL AND ECOLOGICAL SCIENCES, ENGINEERING AND TECHNOLOGY RESOURCES*
10. *FOOD AND AGRICULTURAL SCIENCES, ENGINEERING AND TECHNOLOGY RESOURCES*
11. *HUMAN RESOURCES POLICY, DEVELOPMENT AND MANAGEMENT*
12. *NATURAL RESOURCES POLICY AND MANAGEMENT*
13. *DEVELOPMENT AND ECONOMIC SCIENCES*
14. *INSTITUTIONAL AND INFRASTRUCTURAL RESOURCES*
15. *TECHNOLOGY, INFORMATION AND SYSTEM MANAGEMENT RESOURCES*
16. *AREA STUDIES (REGIONAL SUSTAINABLE DEVELOPMENT REVIEWS)*
17. *BIOTECHNOLOGY*
18. *CONTROL SYSTEMS, ROBOTICS AND AUTOMATION*
19. *LAND USE, LAND COVER AND SOIL SCIENCES*
20. *TROPICAL BIOLOGY AND CONSERVATION MANAGEMENT*

CONTENTS

Preface

xix

VOLUME I

Exergy, Energy System Analysis, and Optimization **1**

Christos A. Frangopoulos, *National Technical University of Athens, Greece*

1. Introduction
2. Historical Evolution of Exergy Analysis
 - 2.1. The Early Years (1824 - 1900)
 - 2.2. The Period of Development (1930 - 1980)
 - 2.3. The Concepts of Exergy and Irreversibility
3. Thermoeconomics in the Design and Operation of Energy Systems
4. Optimization in Energy Systems
 - 4.1. Definition of Optimization
 - 4.2. The Need for Optimization
 - 4.3. A Brief Historical Overview
 - 4.3.1. Development of Optimization Techniques
 - 4.3.2. Introduction of Optimization to Energy Systems
 - 4.4. Formulation of the Optimization Problem
 - 4.4.1. Mathematical Statement of the Optimization Problem
 - 4.4.2. Objective Functions
 - 4.4.3. Independent Variables
 - 4.4.4. Equality and Inequality Constraints
 - 4.5. Levels of Optimization of Energy Systems
 - 4.6. Methods for Solution of the Optimization Problem
5. Application of Artificial Intelligence and Expert Systems in Energy Systems Design
 - 5.1. Design, Knowledge, and Artificial Intelligence
 - 5.2. Definition of Artificial Intelligence
 - 5.3. Expert Systems
6. Energy Systems and Sustainability
 - 6.1. The General Social Framework
 - 6.2. Sustainability Considerations in Energy Systems Analysis
 - 6.3. Global Implications of the Second Law of Thermodynamics
7. Future Work

Exergy and Thermodynamic Analysis **34**

George Tsatsaronis, *Technical University of Berlin, Germany*

Frank Czesla, *Technical University of Berlin, Germany*

1. Introduction
2. Exergy
3. Performance Evaluation with the Aid of Exergetic Variables
 - 3.1. Exergy Destruction
 - 3.2. Exergy Loss
 - 3.3. Exergetic Efficiency
 - 3.4. Exergy Destruction Ratio and Exergy Loss Ratio
4. Comprehensive Thermodynamic Analysis
5. Conclusion

Basic Exergy Concepts **46**

George Tsatsaronis, *Technical University of Berlin, Germany*

Frank Cziesla, *Technical University of Berlin, Germany*

1. Energy and Exergy
2. Reference Environment and Exergy Components
3. Reference States and Chemical Exergy
4. Calculation of Chemical Exergy Values

Exergy Balance and Exergetic Efficiency

60

George Tsatsaronis, *Technical University of Berlin, Germany*

Frank Cziesla, *Technical University of Berlin, Germany*

1. Exergy Balance and Exergy Destruction
 - 1.1. Closed System Exergy Balance
 - 1.2. Control Volume Exergy Balance
 - 1.3. Thermodynamic Inefficiencies
 - 1.3.1. Exergy Destruction Associated With Heat Transfer
 - 1.3.2. Exergy Destruction Associated With Friction
 - 1.3.3. Avoidable and Unavoidable Exergy Destruction
 - 1.3.4. Endogenous and Exogenous Exergy Destruction
 - 1.4. Guidelines for improving the Use of Energy Resources
2. Exergetic Variables
 - 2.1. Exergetic Efficiency
 - 2.2. Exergy Destruction and Exergy Loss
 - 2.3. Exergy Destruction Ratio

Exergy Analysis of Simple Processes

79

George Tsatsaronis, *Technical University of Berlin, Germany*

Frank Cziesla, *Technical University of Berlin, Germany*

1. Thermodynamic Analysis of Single System Components
 - 1.1. Chemical Reactors
 - 1.1.1. Combustion Chamber
 - 1.1.2. Gasifier
 - 1.1.3. Steam Reformer
 - 1.2. Heat Exchangers
 - 1.3. Turbomachines
 - 1.3.1. Compressor, Pump, or Fan
 - 1.3.2. Turbine (Expander)
 - 1.4. Dissipative Components
 - 1.5. Evaluation
2. Thermodynamic Analysis of Simple Processes
 - 2.1. Steam Generator
 - 2.2. Simple Cogeneration System

Strengths and Limitations of Exergy Analysis

108

George Tsatsaronis, *Technical University of Berlin, Germany*

Frank Cziesla, *Technical University of Berlin, Germany*

1. Introduction
2. Evaluation
 - 2.1. Exergetic variables
 - 2.2. Interpretation of the results of an exergy analysis
3. Optimization
4. Process development
5. Conclusions

Energetic and Exergetic Analysis of Complex Systems**121**George Tsatsaronis, *Technical University of Berlin, Germany*Frank Cziesla, *Technical University of Berlin, Germany*

1. Introduction
2. Steam Power Plant
 - 2.1. Process Description
 - 2.2. Energy Analysis
 - 2.3. Exergy Analysis
 - 2.4. Discussion and Conclusions
3. Combined-Cycle Power Plant
 - 3.1. Process Description
 - 3.2. Energy Analysis
 - 3.3. Exergy Analysis
 - 3.4. Discussion and Conclusions
4. Externally-Fired Combined-Cycle Power Plant
 - 4.1. Process description
 - 4.2. Exergy Analysis
 - 4.3. Results and Discussion
5. Conclusions

Graphic Exergy Analysis**147**Masaru Ishida, *Tokyo Institute of Technology, Japan*

1. Introduction
2. A New Approach to Thermodynamics
 - 2.1. The Hierarchical Nature of Thermodynamics
 - 2.2. Three Kinds of Thermodynamics
 - 2.3. Thermodynamics of a Substance
 - 2.4. Thermodynamics of a Process
 - 2.5. Thermodynamics of a System
 - 2.6. Characteristic Features of Intermediary Energy
3. Graphic Applications of Thermodynamic Compass
 - 3.1. Introduction to Thermodynamic Compass
 - 3.2. Classification of Processes on the Compass
 - 3.3. Representation of Exergy Loss on Thermodynamic Compass
 - 3.4. Application to Thermodynamics of Processes
4. Application of an Energy-Utilization Diagram (EUD)
 - 4.1. Model System
 - 4.2. The Second Law and Exergy Loss Analysis
 - 4.3. The Second Law and Energy-Loss Analysis from the Viewpoint of the Energy-Utilization Diagram
 - 4.4. Presentation of the Whole System
5. Conclusions

Pinch Analysis**166**Francois Marechal, *Ecole Polytechnique Federale de Lausanne, Switzerland*

1. Introduction
2. Energy-Capital Trade-off for Heat Recovery by a Heat Exchanger
3. Defining the Minimum Energy Requirement of a Process
 - 3.1. The Composite Curves
 - 3.2. The Pinch Point
 - 3.3. The Heat Cascade
 - 3.4. The Problem Table Method
 - 3.5. The Grand Composite Curve

4. Consequences of the Pinch Point Location
 - 4.1. Heat Sink and Heat Source
 - 4.2. The More In, The More Out
 - 4.3. Penalizing Heat Exchangers
 - 4.3.1. Exchangers using Hot Utility below the Pinch Point
 - 4.3.2. Exchangers using Cold Utility above the Pinch Point
 - 4.3.3. Exchangers that do exchange heat across the pinch point
5. Utility Integration
6. Targeting the Investment
 - 6.1. The Minimum Number of Connections Target
 - 6.2. Total Area Target
 - 6.3. Capital Cost Estimation
 - 6.4. Optimal ΔT_{\min} Value
 - 6.5. Physical Meaning of the ΔT_{\min}
7. Summary of the Targeting Method
8. Heat Exchanger Network (HEN) Design
 - 8.1. Representing a Heat Exchanger Network
 - 8.2. The HEN Design Target
9. The Pinch Design Method
 - 9.1. Feasibility Rules
 - 9.1.1. Number of Streams Rule
 - 9.1.2. The c_p Rule
 - 9.2. Heuristic Rules
 - 9.2.1. Tick-off Rule
 - 9.2.2. Remaining Problem Analysis
 - 9.2.3. Driving Force Plot and Splitting Factors
 - 9.2.4. Other Heuristics
 - 9.2.5. A Synthesis Method
10. Mathematical Programming Approach
 - 10.1. Heat Load Distribution
11. Optimizing the Heat Exchanger Network Design
 - 11.1. Loops and Path for Reducing the Number of Heat Exchangers
 - 11.2. Using Mixed Integer Non Linear Programming Methods
12. Final Remarks Concerning the Heat Exchanger Network Design

Process Integration and Improvement

199

Francois Marechal, *Ecole Polytechnique Federale de Lausanne, Switzerland*

1. Introduction
2. Pinch Analysis and Process Improvement
3. Integration of Heat Pumps
 - 3.1. Mechanical Compression Cycle Heat Pumps
 - 3.2. Other Types of Heat Pumps
4. Utility Integration
 - 4.1. Using the Grand Composite Curve
 - 4.2. Combining Pinch Analysis and Exergy Concepts
5. Methodology for Designing Integrated Utility Systems
6. Using the Exergy Depletion as the Objective Function
7. Representing the Integration of the Utility System
8. Final Remarks Concerning the Process Optimization and the Utility System Integration

Index

231

About EOLSS

235

VOLUME II

Thermoeconomic Analysis 1

Antonio Valero, *University of Zaragoza, Spain*
Cesar Torres Cuadra, *Universidad de Zaragoza, Spain*

1. Introduction
2. A Historical Overview
3. What is the Exergy Cost?
4. Cost Accounting
 - 4.1. The Process of Cost Formation
 - 4.2. The Principle of Non-equivalence of the Irreversibilities
5. Thermoeconomic Diagnosis
6. Thermoeconomic Optimization
7. Final reflections and conclusions

The Thermodynamic Process of Cost Formation 36

Antonio Valero, *University of Zaragoza, Spain*

1. Introduction
 - 1.1. Irreversibility and exergy cost
2. Definitions and concepts
3. Cost accounting and the exergy cost theory
 - 3.1. Calculation of average exergy costs
 - 3.2. Calculation of exergoeconomic costs
 - 3.3. External assessment and additional concepts
 - 3.3.1. Exergy Amortization
 - 3.3.2. Residues (Wastes)
 - 3.3.3. Assessment of the plant fuels
 - 3.3.4. Cumulative exergy cost or ecological cost
4. On the nature of costs
 - 4.1. Linearity of costs
 - 4.2. The process of cost formation
5. Conclusion

Symbolic Thermoeconomic Analysis of Energy Systems 61

Cesar Torres Cuadra, *Universidad de Zaragoza, Spain*

1. Introduction
2. The Fuel-Product Model
 - 2.1. Cost Model Equations
3. The FP Representation
 - 3.1. Distribution Ratios
 - 3.2. Cost and Efficiency Formulae
 - 3.3. Irreversibility and Cost
 - 3.4. Exergoeconomic Cost
4. The PF Representation
 - 4.1. Junction Ratios
 - 4.2. Unit Exergy Consumption
 - 4.3. Cost Equations
 - 4.4. The FP and PF Relationships
 - 4.5. Impact on Resources Consumption
5. Closure

Structural Theory of Thermoconomics**82**Luis Serra, *University of Zaragoza, Spain*Cesar Torres Cuadra, *Universidad de Zaragoza, Spain*

1. Introduction
2. Marginal Costs
 - 2.1. Characteristic Equations
 - 2.2. General Equation of Marginal Cost
 - 2.3. Generalized Fuel Impact
 - 2.4. Lagrange Multipliers and Marginal Costs
3. Structural Theory of Thermoconomics
 - 3.1. Linear Model of Characteristic Equations
 - 3.2. Average and Marginal Costs
4. Structural Theory as Standard for Thermoconomics
 - 4.1. Structural Theory and Exergy Cost Theory
 - 4.1.1. Structural Theory and the FuelProduct Model
 - 4.2. Structural Theory and Thermo-economic Functional Analysis
5. Applications
 - 5.1. Local Optimization
6. Closure

Functional Analysis**105**Christos A. Frangopoulos, *National Technical University of Athens, Greece*

1. Introduction
2. Concepts and Definitions
3. The Functional Diagram of a System
4. Functional Analysis of a System
 - 4.1. Identification of the Functions
 - 4.2. Drawing the Functional Diagram of the System
5. Economic Functional Analysis
6. Functional Optimization
7. Closure

Cost Functions of Components for Optimal System Design**122**Yehia M. El-Sayed, *Advanced Energy Systems Analysis, USA*

1. Introduction to Multidisciplinary Problems
2. A Scenario of Interdisciplinary Communication
 - 2.1. The Objective Function
 - 2.2. Interdisciplinary Communication
3. The Concept of Costing Equations
4. The Information Exchange Matrix of a Component
5. An Application Example to a Heat Exchange Device
6. Alternative Communication Scenarios and Applications
 - 6.1. The Costing of the Same Heat Exchange Device by Selection
 - 6.2. The Off-Design Performance Of The Super-heater
7. Concluding Remarks

Application of Thermoconomics to Operation Diagnosis of Energy Plants**144**Antonio Valero, *University of Zaragoza, Spain*Cesar Torres Cuadra, *Universidad de Zaragoza, Spain*

1. Introduction
2. Thermo-economic Operation Diagnosis

- 2.1. Malfunction and Dysfunction Analysis
- 2.2. Malfunction Causes Analysis
3. Concluding Remarks

Application of Thermoconomics to the Design and Synthesis of Energy Plants	160
<i>George Tsatsaronis, Technical University of Berlin, Germany</i>	

1. Introduction
2. Principles of Exergoeconomics Applied to Design Optimization
 - 2.1. Exergy Costing
 - 2.2. Exergy Destruction Reduces Investment Cost
3. Cost Balances and Auxiliary Equations
4. Optimization with Exergoeconomics
 - 4.1. Exergoeconomic Variables and Iterative Improvement
 - 4.2. Approaches of Mathematical Optimization
5. Conclusion

Modeling, Simulation and Optimization in Energy Systems	173
<i>Christos A. Frangopoulos, National Technical University of Athens, Greece</i>	
<i>Enrico Sciubba, Università di Roma I “La Sapienza”, Italy</i>	

1. Introduction
2. Modeling and Simulation of Energy Systems
 - 2.1. Definition of Modeling and Simulation
 - 2.2. A Brief History of Energy Systems Design Procedures
 - 2.3. Modeling
 - 2.4. Simulation
 - 2.4.1. Simulation of Individual Processes and Components
 - 2.4.2. Simulation of Complex Processes and Plants
3. Optimization in Energy Systems
 - 3.1. Definition of Optimization
 - 3.2. The Need for Optimization
 - 3.3. A Brief Historical Overview
 - 3.3.1. Development of Optimization Techniques
 - 3.3.2. Introduction of Optimization to Energy Systems
 - 3.4. Formulation of the Optimization Problem
 - 3.4.1. Mathematical statement of the optimization problem
 - 3.4.2. Objective Functions
 - 3.4.3. Independent Variables
 - 3.4.4. Equality and Inequality Constraints
 - 3.5. Levels of Optimization of Energy Systems
 - 3.6. Methods for Solution of the Optimization Problem
4. Current State of Development and Future Work in the Field of Modeling, Simulation and Optimization of Energy Systems

Modeling and Simulation Methods	192
<i>Enrico Sciubba, Università di Roma I “La Sapienza”, Italy</i>	

1. Introduction: "Modeling" versus "Simulation"
2. A Brief History of Energy Systems Design Procedures
3. Modeling
 - 3.1. Thermo-Physical Material Properties
 - 3.2. Passive Components
 - 3.3. Active Components
 - 3.4. Control and Monitoring Systems

- 3.5. Process Modeling
4. Direct versus Inverse Design: "Design" versus "Simulation"
5. Simulation Procedures
 - 5.1. Individual Processes and Components
 - 5.1.1. The Mathematical Representation of the Transfer Function II
 - 5.1.2. The Acquisition of Boundary and Initial Conditions
 - 5.1.3. The Solution of the Global System of Equations
 - 5.2. Complex Processes and Plants
 - 5.2.1. Translation of the Process Structure into Machine-Readable Input
 - 5.3. Solution of the Global System of Balance Equations
 - 5.3.1. Equation-Oriented Solution Procedures
 - 5.3.2. Component-Oriented Solution Procedures
 - 5.3.3. The Selectively Segregated Approach
6. Special Topics
 - 6.1. Parallel Processing
 - 6.2. Simulation with Structure Adaptation
 - 6.2.1. Simulated Annealing
 - 6.2.2. Genetic Algorithms
 - 6.2.3. "Global Cost" Methods: Super-targeting
 - 6.3. Optimization
7. Conclusions

Design and Off-Design Simulation of Complex Energy Systems

220

Enrico Sciubba, *Università di Roma 1 "La Sapienza", Italy*

1. Introduction
2. Definitions
3. Position of the "Nameplate Simulation Problem"
 - 3.1. Problem Formulation
 - 3.2. The necessary Data Base
 - 3.3. The Governing Equations
 - 3.4. Independent Variables
 - 3.5. Constraints
4. Position of the "Steady-State Off-Design Simulation Problem"
 - 4.1. Problem Formulation
 - 4.2. The necessary Data Base
 - 4.3. The Governing Equations
 - 4.4. Independent Variables
 - 4.5. Constraints
5. Position of the "Unsteady Simulation Problem"
 - 5.1. Problem Formulation
 - 5.2. The necessary Data Base
 - 5.3. The Governing Equations
 - 5.4. Independent Variables
 - 5.5. Constraints
 - 5.6. Note on Inverse Design problems
6. Solution Techniques
 - 6.1. Steady Design Problems
 - 6.2. Steady Off-Design Problems
 - 6.3. Unsteady Problems
7. Conclusions

Optimization Methods for Energy Systems

233

Christos A. Frangopoulos, *National Technical University of Athens, Greece*

1. Introduction

2. Definition of Optimization
3. Formulation of the Optimization Problem
 - 3.1. Mathematical Statement of the Optimization Problem
 - 3.2. Objective Functions
 - 3.3. Independent Variables
 - 3.4. Equality and Inequality Constraints
4. Levels of Optimization of Energy Systems
5. Mathematical Methods for Solution of the Optimization Problem
 - 5.1. Classes of Mathematical Optimization Methods
 - 5.1.1. Constrained and Unconstrained Programming
 - 5.1.2. Search and Calculus Methods
 - 5.1.3. Linear, Nonlinear, Geometric, and Quadratic Programming
 - 5.1.4. Integer- and Real-valued Programming
 - 5.1.5. Deterministic and Stochastic Programming
 - 5.1.6. Separable Programming
 - 5.1.7. Single and Multiobjective Programming
 - 5.1.8. Dynamic Programming and Calculus of Variations
 - 5.1.9. Genetic Algorithms
 - 5.1.10. Simulated Annealing
 - 5.1.11. Other Methods
 - 5.2. Basic Principles of Calculus Methods
 - 5.2.1. Single-variable Optimization
 - 5.2.2. Multi-variable Optimization
 - 5.3. Procedure for Solution of the Problem by a Mathematical Optimization Method
 - 5.4. Decomposition
 - 5.5. Multilevel Optimization
 - 5.6. Modular Simulation and Optimization
 - 5.7. Parallel Processing
6. Special Methods for Optimization of Energy Systems
 - 6.1. Methods for Optimization of Heat Exchanger Networks
 - 6.1.1. Heuristic Methods
 - 6.1.2. Search Methods
 - 6.1.3. Pinch Method
 - 6.1.4. Mathematical Programming Methods
 - 6.1.5. Artificial Intelligence Methods
 - 6.2. The First Thermoeconomic Optimization Method
 - 6.3. The Functional Approach
 - 6.3.1. Complete Functional Decomposition
 - 6.3.2. Partial Functional Decomposition
 - 6.4. Artificial Intelligence Techniques
7. The Work Ahead

Operation Optimization of Energy Systems

259

Christos A. Frangopoulos, *National Technical University of Athens, Greece*

1. Introduction
2. Statement of the Optimization Problem
3. Solution Methods
4. Application Example
 - 4.1. Description of the Energy System
 - 4.2. Primary Energy Sources
 - 4.3. Energy Conversion
 - 4.4. Operation Optimization of the System
 - 4.4.1. The Need for Operation Optimization
 - 4.4.2. The Optimization Objective
 - 4.4.3. Considerations on Capital and Operation Expenses
 - 4.4.4. Description of the Computer Program

- 4.5. Numerical Results
 - 4.5.1. Results for Typical Load Conditions
 - 4.5.2. Examples of Sensitivity Analysis
- 4.6. Conclusions from the Example
- 5. Conclusion

Design and Synthesis Optimization of Energy Systems

274

Christos A. Frangopoulos, *National Technical University of Athens, Greece*

Michael R. von Spakovsky, *Virginia Polytechnic Institute and State University, USA*

Enrico Sciubba, *Università di Roma I “La Sapienza”, Italy*

- 1. Introduction
- 2. Discussion on the Uniqueness of the Solution of the Synthesis and Design Optimization Problem and on the Possibility of finding this Solution.
- 3. Approaches to the Optimal Synthesis of Energy Systems
- 4. Mathematical Statement of the Complete Optimization Problem
- 5. Representative Methods for the Solution of the Synthesis Optimization Problem
 - 5.1. The Connectivity Matrix Method
 - 5.2. Simulated Annealing
 - 5.3. Algorithmic Approaches
 - 5.4. Targeting Methods
 - 5.5. The Intelligent Functional Approach
 - 5.6. Decomposition
 - 5.7. Artificial Intelligence and Expert Systems Techniques
- 6. Application Examples
 - 6.1. Optimization of a Waste Incineration Cogeneration Plant
 - 6.1.1. Description of the Superstructure
 - 6.1.2. Identification of Time Intervals
 - 6.1.3. Statement of the Optimization Problem
 - 6.1.4. Thermodynamic and Economic Models
 - 6.1.5. Solution Procedure
 - 6.1.6. Results and Comments
 - 6.2. Optimization of an Aircraft Energy System
 - 6.2.1. Description of the System
 - 6.2.2. Statement of the Optimization Problem
 - 6.2.3. Simulation Models
 - 6.2.4. Solution Procedure
 - 6.2.5. Results and Comments
 - 6.2.6. The Performance of Decomposition
- 7. Conclusion

Design Optimization of Power and Cogeneration Systems

303

Yehia M. El-Sayed, *Advanced Energy Systems Analysis, USA*

- 1. Introduction
- 2. The Optimal System Design for Time-independent Production
 - 2.1. The Interacting Resources of an Energy-conversion Device
 - 2.1.1. Quantification of the Making and Operating Resources
 - 2.2. Making and Operating Resources of a System of Devices
 - 2.3. A Decomposition Strategy
 - 2.3.1. Decomposition at the Discipline Level
 - 2.3.2. Decomposition at the Device Level
 - 2.3.3. The Updating Equation
 - 2.3.4. The Price of Exergy Destruction
 - 2.3.5. Global Decision Variables
- 3. An Application Example of Time-Independent Production

4. The Optimal System Design for Time-dependent Production
 - 4.1. Problem Complexity
 - 4.2. The Computation of System Off-design Performance
 - 4.2.1. The Performance Equations of Devices
 - 4.2.2. The Performance Equation of a System of Devices
 - 4.3. An Illustration of Off-design Computations
 - 4.3.1. Convergence
 - 4.3.2. Design and Off-design Results
 - 4.3.3. Overall System Performance Equation
 - 4.4. A Simplified Screening Method for Time-dependent Production
5. Application Examples of Time-dependent Production
 - 5.1. Power and Heat Cogeneration for Variable Demands
 - 5.1.1. The Investigation Made
 - 5.2. The Optimal Operating Mix of Power Plants
 - 5.2.1. The Condition of Optimality
 - 5.2.2. Illustrative Example
6. Concluding Remarks

Electrical Network Optimization**333**John Kabouris, , *Greece*George C. Contaxis, *National Technical University of Athens (NTUA), Greece*

1. Introduction
2. Transmission System Optimal Expansion Planning
3. Transmission System Operational Requirements
4. Statement of the Optimization Problem
 - 4.1. Problem Statement
 - 4.2. Formulation
 - 4.3. Modelling of Planning Criteria
 - 4.4. Technical Planning Constraints
5. Optimization Methodologies
6. Conclusion

District Heating Networks Calculation and Optimization**347**Michele Cali, *Politecnico di Torino, Italy*Romano Borchiellini, *Politecnico di Torino, Italy*

1. Introduction
2. Pipe Networks
3. The Engineering Problem
4. The Model
 - 4.1. The Topological Model
 - 4.2. The Fluid Dynamic Model
 - 4.3. The Energy Model
 - 4.4. Other Thermodynamic Models
 - 4.5. The Thermoeconomic Models
5. The Solution Strategies
6. An Example
7. The Optimization versus the Simulation Problem

Petroleum Pipeline Network Optimization**370**Michael J. Economides, *University of Houston, USA*Leonidas Kappos, *University of Houston, USA*

1. Introduction

2. Optimization
3. Pipelines
 - 3.1. Oil Pipelines
 - 3.2. Gas Pipelines
 - 3.3. Transmission/Product Pipelines
 - 3.4. Other Pipelines
 - 3.4.1. Two-Phase Pipelines
 - 3.4.2. LNG Pipelines
 - 3.4.3. CO₂ Pipelines
4. Pipeline Design
 - 4.1. Liquids Pipelines
 - 4.2. Gas Pipelines
 - 4.3. Two-phase Pipeline Design
5. Energy Savings
 - 5.1. Station Design and Operation
 - 5.2. Safety Precautions
6. Pump Application and Design
 - 6.1. Centrifugal Pumps
 - 6.2. Positive Displacement Pumps
 - 6.3. Horsepower Requirements
 - 6.4. Compressors
7. Pipeline Construction
 - 7.1. Land Pipeline Construction
 - 7.2. Offshore Pipeline Construction
 - 7.3. Arctic Pipeline Construction
8. Optimization Example

VOLUME III

Artificial Intelligence and Expert Systems in Energy Systems Analysis	1
Enrico Sciubba, <i>Università di Roma I “La Sapienza”, Italy</i>	

1. Introduction
2. Is there a "universal" design paradigm?
 - 2.1. The "Universal Design Procedure": a possible Flowchart
 - 2.1.1. Definition of Needs and Objectives
 - 2.1.2. Preliminary Estimate of the Design Costs
 - 2.1.3. Feasibility Study
 - 2.1.4. Final Design
 - 2.1.5. Construction
 - 2.1.6. Testing and Customer's Acceptance
 - 2.1.7. Modifications and Improvements
3. Application of the Universal Design Procedure to Process Synthesis
 - 3.1. Formulation and Position of a Process Engineering Design task
 - 3.2. Towards a General Process Synthesis Paradigm
4. Design and "Optimization"
5. Process Optimization
 - 5.1. The Classical Viewpoint
 - 5.2. Some Additional Remarks on the Optimization of Thermal Systems
 - 5.3. Optimization Criteria
6. Computer-aided Synthesis-and-Design tools

- 6.1. Deterministic Methods for Process Synthesis
 - 6.1.1. The Connectivity Matrix Method
- 6.2. Process Synthesis based on AI Methods
 - 6.2.1. Expert Systems for Design
 - 6.2.2. General Knowledge Representation for Design Applications
 - 6.2.3. Example of Automatic Process Design
- 7. Application of the Universal Design Procedure to Component Design
- 8. Expert Assistants for Process Diagnostics and Prognostics
- 9. Conclusions

Artificial Intelligence and Energy Systems: Scope and Definitions

30

Enrico Sciubba, *Università di Roma I “La Sapienza”, Italy*

- 1. Introduction: Engineering Design, Knowledge, and Artificial Intelligence
 - 1.1. What is Artificial Intelligence?
 - 1.2. AI is No Intelligence!
- 2. Definitions of Concepts and Terms
 - 2.1. Artificial Intelligence (AI)
 - 2.2. Knowledge
 - 2.3. Expert System (ES)
 - 2.4. Knowledge Base (KB)
 - 2.5. Inference Engine (IE)
 - 2.6. Rules
 - 2.7. Facts
 - 2.8. Objects
 - 2.9. Classes
 - 2.10. Induction
 - 2.11. Deduction
 - 2.12. Hierarchical Refinement
 - 2.13. Blackboard Systems
 - 2.14. Decision Tree
 - 2.15. Knowledge Engineer
 - 2.16. Domain Expert
- 3. Relational Versus Deterministic Programming
- 4. Possible Versus Existing Applications of AI to Thermal Systems
- 5. Logical Systems
- 6. Semantic Networks
- 7. Fuzzy Sets
- 8. Neural Networks
- 9. Casual Versus Mechanical Learning: "Memory"
- 10. Search Methods
- 11. Handling of Constraints
- 12. Qualitative and Approximate Reasoning: Belief

Expert Systems and Knowledge Acquisition

79

Roberto Melli, *Università di Roma I “La Sapienza”, Italy*

- 1. Introduction
- 2. General Knowledge representation for design purposes
- 3. The Knowledge Acquisition Problem
 - 3.1. Acquisition of Knowledge is a formidable Problem in itself
 - 3.2. Implementing the Knowledge Base
 - 3.3. Qualitative Knowledge
 - 3.4. Are there an “Optimal” Size and an “Optimal” Level for the KB?
 - 3.5. Tacit vs. Explicit Knowledge
- 4. Knowledge Decomposition: Semantic Networks

5. Present Knowledge Acquisition methods
6. A look into the future: Potential Developments
7. Conclusions

Present Applications of Artificial Intelligence to Energy Systems

93

Roberto Melli, *Università di Roma 1 “ La Sapienza, Italy*

1. Introduction
2. Possible Applications
3. Existing Applications
 - 3.1. Process Monitoring & Control
 - 3.2. Scheduling and Planning
 - 3.3. Fault Diagnostics and Maintenance
 - 3.4. Design
4. A look into the future: Potential Applications
5. Conclusions

Artificial Intelligence in Component Design

105

Roberto Melli, *Università di Roma 1 “ La Sapienza, Italy*

1. Introduction
2. Characterization of the Design Process
 - 2.1. Abstraction
 - 2.2. Classification
 - 2.3. Analogy
 - 2.4. Error Handling
 - 2.5. Hierarchical Knowledge Elicitation
3. Expert Systems, Expert Assistants and Expert Advisors
4. The task of "Designing a Component"
 - 4.1. General Strategies
 - 4.2. Problem Breakdown into Structural Elements
5. Selection and Design of a Feedwater Pump
 - 5.1. The Physical Problem
 - 5.2. Some Theoretical Considerations
 - 5.3. Solution
6. Choice and Design of a Shell-and-Tube Heat Exchanger
 - 6.1. The Physical Problem
 - 6.2. Some Theoretical Considerations
 - 6.3. Solution

Artificial Intelligence in Process Design

125

Enrico Sciubba, *Università di Roma 1 “ La Sapienza”, Italy*

1. Introduction
2. Is There a "Universal" Design Paradigm?
3. Application of the Universal Design Procedure to Process Engineering Problems
 - 3.1. Formulation and Position of a Process Engineering Design Task
 - 3.2. Towards a General Process Design Paradigm
4. Design and "Optimization." Direct and Inverse Problems
5. Process Synthesizers
 - 5.1. Artificial Intelligence and Expert Systems
 - 5.2. General Knowledge Representation for Design Applications
 - 5.2.1. Problem Specification
 - 5.2.2. Functional Analysis: Relations Between the Given Design Specifications and the Possibly Relevant Parameters
 - 5.2.3. Design Plan Generation
 - 5.2.4. An Example of Automatic Process Design

6. Process Optimization: The Classical Viewpoint
 - 6.1. Some Additional Remarks on the Optimization of Thermal Systems
 - 6.1.1. Thermoeconomic Optimization
 - 6.1.2. Extended Exergy Accounting
7. Examples
 - 7.1. Choice and Technical Specification of a Gas Turbine Plant
 - 7.1.1. The Physical Problem
 - 7.1.2. Some Theoretical Considerations
 - 7.1.3. Solution
 - 7.2. Optimal Synthesis of a Steam and Power Cogeneration Plant
 - 7.2.1. The Physical Problem
 - 7.2.2. Some Theoretical Considerations
 - 7.2.3. Solution
 - 7.3. Optimal Synthesis of a Heat Exchanger Network
 - 7.3.1. The General Problem
 - 7.3.2. Some Theoretical Considerations
 - 7.3.3. The Physical Problem Formulation

Sustainability Considerations in the Modeling of Energy Systems

171

Michael R. von Spakovsky, *Virginia Polytechnic Institute and State University, USA*

1. Introduction
2. Expansion of the Meaning of "Optimal System" – Sustainability
3. Pollution and Resource-related Indices
4. Sustainable Energy System Synthesis, Design and Operation – Environomics
5. Role of the Second Law of Thermodynamics
6. National and Global Exergy Accounting of Natural Resources
7. Conclusions

Life-Cycle, Environmental and Social Considerations - Sustainability

190

Enrico Sciubba, *Università di Roma I “La Sapienza”, Italy*

Paolo Frankl, *Università di Roma I “La Sapienza”, Italy*

1. Introduction
2. Extension of the concept of "Optimal System"
 - 2.1. Including the Effects of a Finite Plant Life
 - 2.2. Including the Effects of the Life-cycle of the Product
 - 2.3. The Environmental Externality
 - 2.4. The Social Externality
 - 2.5. Material cycles
 - 2.5.1. Non-Renewable Resources
 - 2.5.2. Renewable resources
3. The tools required for an extended analysis
 - 3.1. Embodied Energy Analysis, “EA”
 - 3.2. Life Cycle Assessment, “LCA”
 - 3.2.1. Methodology
 - 3.2.2. Key Features and Limits of LCA
 - 3.2.3. Examples of the application to energy systems
 - 3.3. Exergetic Life Cycle Assessment, ELCA
 - 3.4. The “Cumulative Exergy Content” Method, CEC
 - 3.5. A Critique of Neo-Classical Economics
 - 3.6. Energy Analysis, EmA
 - 3.7. Extended Exergy Accounting, EEA
4. Application of the tools - Implementation issues and possible solutions
 - 4.1. Availability and Quality of Data
 - 4.2. Impact Assessment Indicators and their Evaluation

- 4.3. The Single Value Indicator Problem
- 4.4. Multi-criteria Methods for the Interpretation of the Results
- 4.5. Asking the Right Question
5. Towards what kind of sustainable society?
 - 5.1. The "Spaceship Earth" Paradigm
 - 5.2. Strong and Weak Sustainability
 - 5.3. Resource Scarcity: Myth or Reality?
 - 5.4. Sustainable Use of Resources
 - 5.5. Sustainable Agriculture
 - 5.6. Sustainable Industrial Sector
 - 5.7. Sustainable Transportation?
 - 5.8. Sustainable Tertiary Sector
 - 5.9. Social Issues
6. Closure

Static and Dynamic Pollution and Resource Related Indices

231

Christos A. Frangopoulos, *National Technical University of Athens, Greece*

1. Introduction
2. The Nature of Indicators or Indices
3. Indicators derived by the Life Cycle Assessment (LCA) Method
 - 3.1. The LCA Method
 - 3.2. The DALY Concept and Index
 - 3.3. Environmental Burden due to Resource Use Indicator
 - 3.4. Environmental Burden due to Emission of Pollutants Indicator
 - 3.5. Climate Change Indicator
 - 3.6. Ozone Depletion Indicator
4. Exergy-based Indices
 - 4.1. Thermo-ecological cost
 - 4.2. Sustainability Index based on Exergy
5. Resource Indicators
 - 5.1. Possible Consumption Indicator (PCI)
 - 5.2. Current Consumption Indicator (CCI)
 - 5.3. Resource Depletion Indicator (RDI)
6. Sustainability Indicators for Energy System Assessment
 - 6.1. Resource Indicators (RI)
 - 6.2. Environmental Indicators
 - 6.3. Social Indicators
 - 6.4. Economic Indicators
 - 6.5. Numerical Example
7. Indices derived by the Externe Project
 - 7.1. Background and Objectives of the Externe Project
 - 7.2. Methodology for Impact Assessment
 - 7.3. Methodology for Economic Valuation
 - 7.4. Results from Application to the Main Fossil Fuel Cycles
 - 7.5. Assessment of Global Warming Damages
8. Conclusion

Analysis and Optimization of Energy Systems with Sustainability Considerations

252

Michael R. von Spakovsky, *Virginia Polytechnic Institute and State University, USA*
 Christos A. Frangopoulos, *National Technical University of Athens, Greece*

1. Introduction
2. The Environomic Optimization Problem
 - 2.1. Statement of the Problem and its Objective or Figure of Merit
 - 2.2. Pollution Measures, Penalties, and Costs

- 2.3. Resource Scarcity Measures, Penalties, and Costs
3. Methods for Estimating External Environmental Costs
4. Market-Based Approaches for Internalizing Environmental Externalities
5. Additional Considerations
6. Application Examples on Analysis and/or Evaluation
 - 6.1. Economic Analysis of a Gas-Turbine Cogeneration System
 - 6.1.1. Description of the System
 - 6.1.2. Net Present Cost of the System
 - 6.1.3. Unit Cost of SO₂ Abatement
 - 6.1.4. Critical Values of the SO₂ Penalty
 - 6.1.5. Numerical Application
 - 6.2. Evaluation of Alternative Systems
7. Application Examples on Optimization
 - 7.1. Optimization of a Gas-Turbine System with SO₂ Abatement
 - 7.1.1. Statement of the Optimization Problems
 - 7.1.2. Numerical Results and Comments
 - 7.2. Optimization of a Recuperative Gas-Turbine Cogeneration System
 - 7.2.1. Statement of the Optimization Problems
 - 7.2.2. Numerical Results and Comments
 - 7.3. Optimization of a District Heating Network with Centralized and Decentralized Heat Pumps, Cogeneration, and/or a Gas Furnace
 - 7.3.1. The DHN Super-Configuration for the Environomic Model
 - 7.3.2. Statement of the Optimization Problem
 - 7.3.3. Numerical Results and Comments
8. Closure

Global Implications of the Second Law of Thermodynamics

289

Jan Szargut, *Technical University of Silesia, Poland*

1. Significance of the Second Law of Thermodynamics
2. Dissipation of Energy
3. Influence of the Laws of Non-equilibrium Thermodynamics
4. Influence of Solar Radiation on the State of the Terrestrial Environment
5. Influence of the Emission of Deleterious Waste Products and Deforestation
6. Depletion of Non-renewable Natural Resources
7. Conservation of the Natural Environment
 - 7.1. Improvement of the Thermodynamic Imperfection of Processes
 - 7.2. Reduction of the CO₂ Emission
 - 7.3. Utilization of Renewable Energy Sources
 - 7.4. Utilization of Waste Products
 - 7.5. Mitigation of the Consumption of Final Products
8. Conclusions

National Exergy Accounting of Natural Resources

306

Goran Wall, *Exergy Consultant, Sweden*

1. The Energy Supply System
 - 1.1. Energy System of Sweden in Terms of Energy
 - 1.2. Energy System of Sweden in Terms of Exergy
2. Exergy use in Swedish society
 - 2.1. Solar Heating
 - 2.2. Forestry and Industry Based on Forests
 - 2.3. Agriculture and Food Production
 - 2.4. Electricity from Hydropower and Thermal Power
 - 2.5. Iron Ore
 - 2.6. Nuclear Fuel

- 2.7. Chemical Fuels
- 2.8. Exergy Losses from Energy Conversions into Heat
- 2.9. Chains of Resource Conversions
- 3. Exergy use in Japanese society
 - 3.1. Solar Heating
 - 3.2. Forestry and Industry Based on Forests
 - 3.3. Agriculture and Food Production
 - 3.4. Electricity from Hydropower and Thermal Power
 - 3.5. Metals
 - 3.6. Nuclear Fuel
 - 3.7. Chemical Fuels
 - 3.8. Exergy Losses from Energy Conversions into Heat and Cold
- 4. Exergy use in the Italian Society
 - 4.1. Solar Heating
 - 4.2. Forestry and Industry Based on Forests
 - 4.3. Agriculture and Food Production
 - 4.4. Electricity from Hydroelectric-power and Thermal Power
 - 4.5. Metals
 - 4.6. Chemical Fuels
 - 4.7. Exergy Losses from Energy Conversions into Heat and Cold
 - 4.8. The Total System
- 5. Historical and Global perspective
 - 5.1. Exergy Use in Swedish Society during the 1920s
 - 5.1.1. Technical Uses of Natural Resources
 - 5.1.2. Agriculture
 - 5.1.3. Forestry
 - 5.1.4. Solid Fuels
 - 5.1.5. Liquid Fuels
 - 5.1.6. Electric Power
 - 5.2. Resource Conversion within Ghana Society in 1975
- 6. Conclusions

Global Exergy Accounting of Natural Resources	347
<i>Antonio Valero, University of Zaragoza, Spain</i>	
<i>Edgar Botero, Universidad Pontificia Bolivariana, Colombia</i>	
<i>Alicia Valero, University of Zaragoza, Spain</i>	

- 1. Introduction
- 2. The exergy replacement cost
 - 2.1. The Exergy Replacement Cost of the Natural Mineral Capital
 - 2.2. The Exergy Replacement Cost of the World's Renewable Water Resources
 - 2.3. An Assessment of the Earth's Clean Fossil Exergy Capital based on Exergy Abatement Costs
- 3. Results
 - 3.1. The Value of the Earth's Mineral Capital
 - 3.2. The Value of the World's Renewable Water Resources
 - 3.3. The Value of the Earth's Clean Fossil Exergy Capital
- 4. Conclusions and Discussions
