## ENVIRONMENTAL SYSTEMS

### **Environmental Systems Volume 1**

e-ISBN: 978-1-84826-210-2

ISBN : 978-1-84826-660-5

No. of Pages: 347

### **Environmental Systems Volume 2**

e-ISBN: 978-1-84826-211-9

ISBN : 978-1-84826-661-2

No. of Pages: 356

### **Environmental Systems Volume 3**

e-ISBN: 978-1-84826-327-7

ISBN : 978-1-84826-777-0

No. of Pages: 412

# CONTENTS

## VOLUME I

<b>Environmental Systems</b>	<b>1</b>
<i>Achim Sydow, National Research Center for Information Technology (GMD.FIRST), Berlin, Germany</i>	

1. Introduction: Systems Approach to Environmental Objects
  - 1.1. Environmental System Conception
  - 1.2. Complexity of Environmental Systems
  - 1.3. Systems Analysis
2. Measurements: Data Capture, Validation, Interpretation
3. Modeling: Model Types, System Identification and Parameter Estimation
  - 3.1. Types of System Models
4. Decision Support: Optimization, Multicriteria Approach, Hierarchical Optimization
  - 4.1. Classical Approach
  - 4.2. Multicriteria Conceptions
  - 4.3. Hierarchical Optimization
5. Applied Systems Analysis: Urban and Regional Studies and Information Systems
  - 5.1. DYMOS-Dynamic Models for Smog Analysis

<b>Measurement Tools for Pollution Sources and Ambient Concentrations</b>	<b>32</b>
---	-----------

*Christopher Koroneos, Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*  
*N. Moussiopoulos, Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*  
*George Roubas, Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*

1. Introduction
2. The Air Pollution System
3. Spectroscopic Monitoring Techniques
  - 3.1. Emission Spectrometry
    - 3.1.1. Chemiluminescence
    - 3.1.2. Fluorescence
    - 3.1.3. Flame Photometry
  - 3.2. Infrared Absorption Spectroscopy
    - 3.2.1. Multiple Pass Cells
    - 3.2.2. Fourier Transform Infrared Spectroscopy (FTIR)
    - 3.2.3. Tunable Diode Laser Spectroscopy (TDLS)
  - 3.3. Ultraviolet-Visible Absorption Spectrometry (UV-Vis)
    - 3.3.1. Differential Optical Absorption Spectrometry (DOAS)
4. Monitoring of Criteria Gaseous Pollutants in the Ambient Air
  - 4.1. Carbon Monoxide (CO)
    - 4.1.1. Non-Dispersive Infrared Spectrometry (NDIR)
    - 4.1.2. Gas Chromatography with Flame Ionization Detection (GC-FID)
    - 4.1.3. Mercury Replacement
    - 4.1.4. Electrochemical Sensors
  - 4.2. Non-Methane Hydrocarbons (NMHC)
5. Monitoring of Non-Criteria Gaseous Pollutants in the Ambient Air
  - 5.1. Ammonia (NH<sub>3</sub>)
  - 5.2. Nitric Acid (HNO<sub>3</sub>)
  - 5.3. Formaldehyde (HCHO)
  - 5.4. Hydroxide Radical (OH)
  - 5.5. Hydrogen Peroxide HO<sub>2</sub> and RO<sub>2</sub>
6. Particulate Matter

- 6.1. Sampling and Collection Methods
  - 6.1.1. Filter Methods
  - 6.1.2. Gravitational and Centrifugal Sedimentation
  - 6.1.3. Impactors
  - 6.1.4. Electrostatic and Thermal Precipitation
- 6.2. Mass Measurement
  - 6.2.1. Gravimetric Method
  - 6.2.2. Beta Ray Attenuation
  - 6.2.3. Piezoelectric Microbalance
- 6.3. Size-Measurement Devices
  - 6.3.1. Inertial Methods
  - 6.3.2. Optical Methods
  - 6.3.3. Electrical Mobility Analyzers
  - 6.3.4. Condensation Nuclei Counter and Diffusion Separators
- 6.4. Chemical Composition Analysis of Particulate Matter

### Measurement Tools: Soil Systems

76

J. Luster, *Swiss Federal Research Institute WSL, CH-8903 Birmensdorf, Switzerland*

1. Introduction
2. The Soil Solid Phase (Soil Matrix)
  - 2.1. Sample Preparation and Storage
  - 2.2. Basic Physical Description and Physical Parameters of Soil Functionality
    - 2.2.1. Bulk and Particle Densities, Porosity
    - 2.2.2. Soil Structure and Texture
    - 2.2.3. Water Regime
    - 2.2.4. Specific Surface
  - 2.3. Total Elemental Analysis
    - 2.3.1. Suitable Methods of Analysis for a Large Part of the Periodic Table
    - 2.3.2. Methods for Carbon, Nitrogen and Sulfur
    - 2.3.3. Correction for Lithogenic Background
  - 2.4. Soil Extracts for Element Availability and Mobility
    - 2.4.1. Soil pH
    - 2.4.2. Easily Soluble Fractions
    - 2.4.3. Exchangeable Ions
    - 2.4.4. Available Elements
    - 2.4.5. Speciation of Elements by Selective Extractions
  - 2.5. Soil Extracts for Organic Xenobiotica
  - 2.6. Soil Microorganisms as Biomonitors
    - 2.6.1. Soil Microbial Biomass and Soil Respiration
    - 2.6.2. Nitrogen Transformations and Enzyme Activities
    - 2.6.3. Bioassays
    - 2.6.4. Effects on Soil Microbial Populations and Communities
  - 2.7. Chemical Structure of Soil Solid Phases and Their Interaction with Pollutants
    - 2.7.1. Composition of the Mineral Soil
    - 2.7.2. Soil Organic Matter (SOM)
    - 2.7.3. Microscopic Characterization of Surfaces
    - 2.7.4. Spectroscopy
    - 2.7.5. Experimental Quantification of Interactions
3. Soil Solution
  - 3.1. Laboratory Methods to Collect Soil Solution
  - 3.2. Sample Preparation and Storage
  - 3.3. Soil Solution Composition

### Measurement Tools for Atmospheric Systems

101

W. K. Graber, *Paul Scherrer Institute, CH-5232 Villigen-PSI, Switzerland*

M. Furger, *Paul Scherrer Institute, CH-5232 Villigen-PSI, Switzerland*

1. Introduction
2. Techniques
  - 2.1. Interaction of Electromagnetic Radiation with the Atmosphere
  - 2.2. Absorption and Emission Spectroscopy
  - 2.3. Interaction of Sound Waves with the Atmosphere
  - 2.4. Chemical Analysis
3. Measurement Tools for Meteorological Parameters
  - 3.1. Radiation and Refraction
  - 3.2. Temperature
  - 3.3. Humidity
  - 3.4. Cloud Properties
  - 3.5. Precipitation
  - 3.6. Wind
  - 3.7. Pressure
4. Measurement Tools for Chemical Parameters
  - 4.1. Gas Concentrations
    - 4.1.1. Oxidants
    - 4.1.2. Volatile Organic Compounds
    - 4.1.3. Nitrogen Compounds
    - 4.1.4. Sulfur Compounds
  - 4.2. Aerosols
    - 4.2.1. Analysis by Physical Methods
    - 4.2.2. Analysis by Chemical Methods
  - 4.3. Photochemical Reaction Rates

**Measurement Tools: Water Systems (Inland Waters)**

**123**

Wolf von Tümpling, *UFZ Centre for Environmental Research Leipzig - Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

Walter Geller, *UFZ Centre for Environmental Research Leipzig - Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

1. Introduction
2. Field Techniques
3. Measurement Tools
  - 3.1. Examination and Tests on-site
    - 3.1.1. pH
    - 3.1.2. Dissolved Oxygen
    - 3.1.3. Turbidity
    - 3.1.4. Transparency
    - 3.1.5. Water Temperature
    - 3.1.6. Electrical Conductivity
    - 3.1.7. Redox Potential
    - 3.1.8. Odors
    - 3.1.9. Coloring
    - 3.1.10. Taste
  - 3.2. Tests in Basic Laboratories
    - 3.2.1. Coliform Bacteria
    - 3.2.2. Total Coliforms
    - 3.2.3. Fecal Coliforms
  - 3.3. Additional Tests in Intermediate Laboratories
    - 3.3.1. Chemical Oxygen Demand (COD)
    - 3.3.2. Biological Oxygen Demand after five days of Incubation (BOD5)
    - 3.3.3. Sodium, Potassium, Calcium, Magnesium, Iron
    - 3.3.4. Ammonia
    - 3.3.5. Sulfide
    - 3.3.6. Nitrite, Nitrate, Phosphate, Chloride, Fluoride, Sulfate
  - 3.4. Central Laboratories

- 3.5. Judgement and Assessment
- 3.6. Mathematical-statistical Judgement and Assessment

**Measurement Tools: Water Systems (Oceans) 150**

Rainer Feistel, *Institut fr Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemnde, Germany*  
 Eberhard Hagen, *Institut fr Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemnde, Germany*

- 1. Introduction
- 2. Current Measurements for Oceans
- 3. Thermodynamic State Properties
- 4. Optical Measurements

**Field Techniques: Soil Systems 164**

P. Blaser, *Swiss Federal Institute for Forest, Snow and Landscape Research CH - 8903 Birmensdorf, Switzerland*

- 1. Introduction
- 2. Field techniques to study soil formation and soil classification
- 3. Evaluating the impact of human activities on soil quantity, soil quality and soil functions
- 4. Field techniques related to study soil loss, soil functionality and soil pollution

**Field Techniques for Atmospheric Systems 182**

W. K. Graber, *Paul Scherrer Institute, Villigen-PSI, Switzerland*  
 M. Furger, *Paul Scherrer Institute, Villigen-PSI, Switzerland*

- 1. Introduction
- 2. Conceptual Aspects of Field Campaigns and Techniques
- 3. Platforms
  - 3.1. Aircraft
  - 3.2. Satellites
  - 3.3. Balloons
  - 3.4. Ships and Buoys
- 4. Chemical Sampling Techniques
- 5. Flux Measurements
- 6. Intensive Field Studies and Long-term Monitoring Programs
- 7. Epilogue

**Field Techniques: Inland Waters 201**

Walter Geller, *UFZ Centre for Environmental Research Leipzig–Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*  
 Wolf von Tuempling, *UFZ Centre for Environmental Research Leipzig–Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

- 1. Introduction
- 2. Objectives: Lakes, Rivers, and Groundwaters
- 3. Human Use, Anthropogenic Changes, and Threats to Inland Waters
- 4. Sampling, Data Assessment and Field Techniques
- 5. Monitoring the State and Change of Water Quality
  - 5.1. Groundwater Monitoring Systems
  - 5.2. Surface Water Monitoring Systems
- 6. Monitoring Surface Waters by Remote Sensing

**Field Techniques: Water Systems (Oceans) 219**

Eberhard Hagen, *Institut für Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemünde, Germany*  
 Rainer Feistel, *Institut für Ostseeforschung, Seestrasse 15, 18119 Rostock/Warnemünde, Germany*

1. Introduction
2. Measuring Platforms
3. Vertical Profiling
4. Towed Systems and Drifters
5. Remote *in situ* Methods
6. Satellite Remote Sensing

**Bioindicators 239**

M. Forstreuter, *Institute of Ecology and Biology, Technical University Berlin, Germany*

1. Introduction
2. Levels of Bioindication
3. Application of Bioindicators
  - 3.1. Bioindicators for Monitoring Air Contamination
  - 3.2. Bioindicators for Monitoring Physical, Chemical Soil Contamination
  - 3.3. Bioindicators for Monitoring Aquatic and Semi-terrestrial Ecosystems
  - 3.4. Bioindicators in Landscape Ecology
4. Conclusion

**Bioindication of Ecosystems Regeneration Ability Thresholds 252**

Angela Schlutow, *OEKO-DATA Strausberg Hegermuehlenstrasse 58, D-15344 Strausberg, Germany*  
 Philipp Kraft, *OEKO-DATA Strausberg Hegermuehlenstrasse 58, D-15344 Strausberg, Germany*

1. Background
2. Model Concept
  - 2.1. Aims of the BERN Model
  - 2.2. Mathematical Concept
  - 2.3. Databases
3. Applications
  - 3.1. Derivation of Critical Loads and Critical Limits
  - 3.2. Implementation into Dynamic Models for Soil Changes
  - 3.3. Determination of the Current Habitat Soil Variables and Comparison with the Basic State Variables
  - 3.4. Determination of the Recovery Target and the Current Regeneration Potential
4. Results, Current State of the Work and Future Outlook

**Index 279****About EOLSS 285****VOLUME II****Environmental Data and Statistics 1**

S. Heiler, *Department of Mathematics and Statistics, University of Konstanz, Germany*

1. Introduction
2. Environmental Data
  - 2.1. Data structures
  - 2.2. Statistical graphics

3. Multivariate Data
  - 3.1. Correlation analysis
    - 3.1.1. The Bravais-Pearson correlation coefficient
    - 3.1.2. Rank correlation
    - 3.1.3. Correlation matrix
    - 3.1.4. Multiple and partial correlation coefficient
    - 3.1.5. Application to heavy metals in water
  - 3.2. Regression
    - 3.2.1. Simple Linear Regression
    - 3.2.2. Non-parametric Regression
    - 3.2.3. Multiple Linear Regression
    - 3.2.4. Non-parametric Multiple Regression
  - 3.3. Principal Components and Factor Analysis
    - 3.3.1. Principal components analysis
    - 3.3.2. Factor Analysis
  - 3.4. Cluster analysis
  - 3.5. Analysis of variance
4. Time Series Analysis
  - 4.1. Introduction
  - 4.2. Trend Estimation
  - 4.3. Smoothing and Seasonal Estimation
  - 4.4. Exponential smoothing
  - 4.5. Stationary Stochastic Processes
  - 4.6. Univariate Linear Time Series Models
  - 4.7. Multivariate Linear Time Series Models
5. Geostatistics
  - 5.1. Introduction
  - 5.2. Homogeneous and Isotropic Random Fields
  - 5.3. Inhomogeneities and Anisotropes
  - 5.4. Space-time Models

### **Spatial Environmental Data**

48

Herlin I., *Inria - BP 105, 78153 Le Chesnay Cedex, France*

1. Introduction
2. Use of Spatial Environmental Information
3. Spatial Data Geometry
4. Classification of Spatial Environmental Databases
5. Metadata for Spatial Environmental Information
  - 5.1. Basic Facts about Metadata
  - 5.2. Spatial Metadata
  - 5.3. Examples of Metadata Systems
6. Spatial Information Systems
7. Aerial and Satellite Images
8. An Example Study: The European THETIS Project
  - 8.1. Image Scenario

### **Non-Spatial Environmental Data**

67

K. Voigt, *GSF - National Research Center for Environment and Health, Institute of Biomathematics and Biometry, Neuherberg, Germany*

1. Proliferation of Environmental Information
2. Classification of Environmental Databases
  - 2.1. Definition of Environmental Data, Information, Database and Information System
  - 2.2. Media for Environmental Databases
    - 2.2.1. Online Databases and CD-ROMs

- 2.2.2. Internet Resources
- 2.3. Subject Classes for Environmental Databases
  - 2.3.1. Classification Types for Environmental Databases
  - 2.3.2. Fact-based Databases (FBDB)
    - 2.3.2.1. Numeric Databases (NU)
    - 2.3.2.2. Metadatabases (MD) / Directories of Internet Resources
    - 2.3.2.3. Research Databases (RD)
    - 2.3.2.4. Catalogues of Chemical Substances (CA)
  - 2.3.3. Text-Based Databases (TBDB)
    - 2.3.3.1. Bibliographic Databases (BI)
    - 2.3.3.2. Full-Text Databases (FT)
  - 2.3.4. Integrated Databases (INDB)
- 3. Metadatabases for Environmental Information
  - 3.1. Development of Environmental Meta-databases
  - 3.2. DAIN - Metadatabase of Internet Resources for Environmental Chemicals
  - 3.3. Example of a DAIN Document
- 4. Environmental Information Systems and Meta-information Systems on Free Internet
  - 4.1. Prerequisite for Information Systems
  - 4.2. International Environmental (Meta) Information Systems
  - 4.3. German Approaches for Environmental (Meta) Information Systems
- 5. Need for Analysis and Evaluation of Environmental Databases

### Statistical Analyses' Design

89

Vijay P. Singh, *Louisiana State University, U.S.A*

- 1. Introduction
- 2. Classification of Environmental Problems
- 3. A Sample of Environmental Problems
- 4. Environmental Data
- 5. Characteristics of Environmental Processes
- 6. Domains of Analyses
- 7. Statistical Approaches
- 8. Design of Statistical Analysis
- 9. Statistical Modelling
  - 9.1. General Model
  - 9.2. Data Model
  - 9.3. Trend Analysis
  - 9.4. Periodicity Analysis
  - 9.5. Time Series Analysis
  - 9.6. Extreme Value Analysis
  - 9.7. Parameter Estimation
  - 9.8. Goodness of Fit Tests
  - 9.9. Sensitivity Analysis
  - 9.10. Reliability Analysis
- 10. Model Selection

### Biostatistics

111

G. Welzl, *Institute of Biomathematics and Biometry, Neuherberg, Germany*

T. Faus-Kessler, *Institute of Biomathematics and Biometry, Neuherberg, Germany*

H. Scherb, *Institute of Biomathematics and Biometry, Neuherberg, Germany*

K. Voigt, *Institute of Biomathematics and Biometry, Neuherberg, Germany*

- 1. Introduction-Overview
  - 1.1. Quantitative Methods—Statistics—Biostatistics
  - 1.2. Methodological Overview
- 2. Analyzing Environmental–ecological Structures

- 2.1. Clustering—Diagrams by Rearrangement
  - 2.1.1. General Remarks
  - 2.1.2. Cluster Analysis and Bertin Strategies
  - 2.1.3. Example
- 2.2. Ordination—Diagrams in Reduced Space
  - 2.2.1. General Remarks
  - 2.2.2. Principal Component Analysis
  - 2.2.3. Example
- 3. Analyzing Spatio-temporal Structures
  - 3.1. Methods for Time Series
    - 3.1.1. General Remarks
    - 3.1.2. Change Points
    - 3.1.3. Example
  - 3.2. Methods for Spatial Patterns
    - 3.2.1. General Remarks
    - 3.2.2. K Function for Cluster Processes—Parameter Estimation
    - 3.2.3. Example

**Data Accuracy and Validation****131**

N. B. Harmancioglu, *Department of Civil Engineering, Faculty of Engineering, Dokuz Eylul University, zmir, Turkey*

V. P. Singh, *Department of Civil Engineering, Louisiana State University, Baton Rouge, LA, USA*

- 1. Introduction
- 2. Data Requirements for Environmental Management
  - 2.1. Types of Data Needed
  - 2.2. Statistical Characteristics of Environmental Data
  - 2.3. The Use of Statistics in Environmental Assessment
    - 2.3.1. Identification of Driving Forces
    - 2.3.2. Watershed System
    - 2.3.3. Observed Data
    - 2.3.4. Selection of Methods
    - 2.3.5. Modeling Techniques
- 3. Environmental Data Management
  - 3.1. Need for Data Management
  - 3.2. Basic Elements of Data Management Systems
  - 3.3. Shortcomings of Available Data
- 4. Errors (Noise) in Data
  - 4.1. Definition of Noise
  - 4.2. Sources of Noise
    - 4.2.1. Conceptual Understanding of Basic Processes
    - 4.2.2. Data Limitations
    - 4.2.3. Sampling and Analytical Errors
    - 4.2.4. Sources of Analytical Errors
  - 4.3. Minimization of Noise
- 5. User's Interpretation of Data Accuracy
  - 5.1. Framework
  - 5.2. Quality of Data
  - 5.3. Means of Interpreting Data Accuracy
    - 5.3.1. Conceptual Tests
    - 5.3.2. Treatment of Historical Data
  - 5.4. Measuring the Information Content of a Data Series
    - 5.4.1. Fisher's Information Measure
    - 5.4.2. Entropy Measures
- 6. Conclusions

**Environmental Models and Simulations****160**S.E. Jørgensen, *DFH, University Park 2, 2100 Copenhagen Ø, Denmark*

1. Introduction
2. Modeling Elements
3. Models as a Management Tool
4. Briefly about the History of Modeling
5. Classification of Models
6. How Good Are Our Models?
7. Generality of Environmental Model
8. State-of-the-Art of Modeling on the Edge of the Third Millennium
9. Modeling in the Future

**Types of Environmental Models****193**R. A. Letcher, *Centre for Resource and Environmental Studies, The Australian National University, Australia*A. J. Jakeman, *Centre for Resource and Environmental Studies, The Australian National University, Australia*

1. Introduction
2. Common Features of Environmental Systems
  - 2.1. Complex Nonlinear Interactions
  - 2.2. Heterogeneity of System Features
  - 2.3. Incompatible Scales
  - 2.4. Inaccessible or Unobservable System Processes
3. Types of Environmental Systems
  - 3.1. Hydrological Systems
    - 3.1.1. Surface Water Systems
    - 3.1.2. Subsurface Water Systems
    - 3.1.3. Coastal Systems
  - 3.2. Ecological Systems
    - 3.2.1. Agricultural Systems
    - 3.2.2. Wildlife Systems
  - 3.3. Climatic Systems
    - 3.3.1. Oceans
    - 3.3.2. Atmosphere
    - 3.3.3. Land Surface
4. Uses and Objectives of Environmental Models
5. Types of Models
  - 5.1. Empirical (or Statistical) Models
  - 5.2. Conceptual (or Lumped Parameter) Models
  - 5.3. Process- (or Physics-) Based Models
6. Modeling Environmental Systems
  - 6.1. Hydrological Systems
    - 6.1.1. Surface Water Systems
    - 6.1.2. Subsurface Hydrological Systems
    - 6.1.3. Coastal Systems
  - 6.2. Ecological Systems
    - 6.2.1. Agricultural and Pastoral Systems
    - 6.2.2. Wildlife Systems
  - 6.3. Climatic Systems
    - 6.3.1. Global Scale Systems
    - 6.3.2. Regional Scale Systems
7. Future Directions in Environmental Modeling

**Case Studies of Local, Regional and Global Applications of Environmental Models 216**Ian Moffatt, *Department of Environmental Science, University of Stirling, UK*

1. Introduction
2. Modeling the Environment
  - 2.1. Environment
  - 2.2. Models
  - 2.3. Scale
3. Local, Regional and Global: The IMAGE Model
  - 3.1. The Image Base Run
4. Policy Use of the IMAGE Model
5. Conclusion: Policy and Management Usage

**Data Integration into Environmental Models and Sensitivity to Input Data 230**San José R., *Environmental Software and Modeling Group, Computer Science School, Technical University of Madrid, Madrid, Spain*Salas I., *Environmental Software and Modeling Group, Computer Science School, Technical University of Madrid, Madrid, Spain*López J., *Environmental Software and Modeling Group, Computer Science School, Technical University of Madrid, Madrid, Spain*González R.M., *Department of Geophysics and Meteorology, Complutense University of Madrid, Madrid, Spain*

1. Introduction: Mathematical Modeling
2. Examples of Data's Importance in Environmental Modeling
  - 2.1. General Description of Air Quality Models
  - 2.2. The Impact of Deposition Modeling on Air Quality Modeling
  - 2.3. The Future Mesoscale Air Quality Systems

**Identifications and Applications of Coupled Climate Models 241**Jin-Yi Yu, *Department of Earth System Science, University of California Irvine, USA.*

1. Introduction
2. Elements of Coupled Climate Models
3. Component Models
  - 3.1. Statistical Type
  - 3.2. Simplified Physics-based Type
  - 3.3. Comprehensive General Circulation Type
4. Coupling Interfaces
  - 4.1. Atmosphere-Ocean
  - 4.2. Atmosphere-Land Surface
  - 4.3. Chemistry-atmosphere/ocean
5. Computational Aspects of Coupled Climate Models
  - 5.1. High-Performance Computational Tools
  - 5.2. Model Data Information System
6. Important Issues of Climate Model Coupling
  - 6.1. Mismatch of Model Grids
  - 6.2. Frequency of Coupling
  - 6.3. Climate Drift
  - 6.4. Spin-up Process
  - 6.5. Flux Correction Technique
  - 6.6. Centralized Coupler or Distributed Broker
  - 6.7. Model Modulations
7. Hierarchy of Coupled Climate Models
  - 7.1. Coupled Ocean-Atmosphere Climate Model
  - 7.2. Coupled Atmosphere-Land Surface Models
  - 7.3. Coupled Chemistry-atmosphere/Ocean Models

8. Applications of Coupled Climate Models
  - 8.1. El Nio-Southern Oscillation
  - 8.2. Amazon Deforestation and Sahel Desertification
  - 8.3. Ozone Hole Depletion
  - 8.4. Global Warming

### **Model Application for Decision Makers and Policy Evaluators**

255

Ian Moffatt, *Department of Environmental Science, University of Stirling, UK*

1. Introduction
2. The Spatial Dimension
  - 2.1. Geometry
    - 2.1.1. Absolute Space
    - 2.1.2. Relativistic Space
  - 2.2. Scales of Measurement
  - 2.3. Units of Measurement and Their Errors
  - 2.4. Spatial Size
3. The Temporal Dimension
4. The Hydrological Cycle - Stocks and Flows
  - 4.1. Environmental Cycles
  - 4.2. Modeling Part of the Hydrological Cycle
  - 4.3. Scaling Up and Down
5. Implications for Life Support on Earth
  - 5.1. Stability in a Sustainable World
  - 5.2. Scale, Complexity and Order in Life Support Systems
6. Conclusion

### **Assessing the Role of Climate in Environmental Systems Analysis and Modeling**

275

Robert J. Oglesby, *Department of Earth and Atmospheric Sciences, Purdue University, USA*

1. Brief Description of the Climate System and How it is Modeled
  - 1.1. Climate System Basics
  - 1.2. Climate Modeling Basics
    - 1.2.1. The Energy Balance Model (EBM)
    - 1.2.2. The Statistical Dynamical Model (SDM)
    - 1.2.3. The General Circulation Model (GCM)
    - 1.2.4. NCAR CSM
    - 1.2.5. Regional Climate Models
    - 1.2.6. Towards an Earth System Model
2. The Role of Climate in Environmental Modeling
3. Case Study I: Smoke From Biomass Burning
  - 3.1. Modeling Approach
  - 3.2. Direct Effect: Adding Smoke Clouds
  - 3.3. Indirect Effect: Decreasing Droplet Radius
4. Case Study II: Rainfall/Runoff in Climate Models
  - 4.1. Description of the Rainfall-ET-Runoff Model
  - 4.2. Fast Track Approach
  - 4.3. Long-Term Small Catchment Approach
  - 4.4. Coupling Climate Models to IHACRES: Preliminary Results
  - 4.5. A Comparison over the U.S. FIFE Region of Simulations from RSM, REGCM2, and MM5/CLIM

**Index**

## VOLUME III

### **Decision Support for Environmental Management** 1

Florin-Gheorghe Filip, *National Institute for R&D in Informatics, Bucharest, Romania*  
Ioana Moasil, *"Lucian Blaga" University, Sibiu, Romania*

1. Introduction
2. DSS- Basic Concepts
  - 2.1. Decision-Making Process
    - 2.1.1. H. Simon's Process Framework
    - 2.1.2. Other Models
  - 2.2. History, Definitions and Classifications
  - 2.3. DSS Technology
  - 2.4. DSS Development
3. AI (Artificial Intelligence) Based Decision- Making
  - 3.1. Expert Systems
    - 3.1.1. Basic Structure
    - 3.1.2. Applications in Environmental Management
    - 3.1.3. Comparison
  - 3.2. Fuzzy Logic Systems Approach
  - 3.3. Case-Based Reasoning
  - 3.4. Neural Networks
4. Advanced DSS for Environmental Management
  - 4.1. More About Model Roles
  - 4.2. Numerical Models and AI Based Methods
5. Conclusions

### **Multi-Objective Decision Support Including Sensitivity Analysis** 17

Makowski, Marek, *International Institute for Applied Systems Analysis, Laxenburg, A-2361 Austria*

1. Introduction
2. Basic Concepts
  - 2.1. Modern DM
  - 2.2. Core Model
    - 2.2.1. Illustrative Examples
    - 2.2.2. Decision Variables
    - 2.2.3. External Decisions
    - 2.2.4. Outcome Variables
    - 2.2.5. Objectives
    - 2.2.6. Mathematical Model
  - 2.3. Sensitivity Analysis
3. Multi-objective Model Analysis
  - 3.1. Classical Methods of Model Analysis
  - 3.2. Aspiration-based Analysis of Efficient Solutions
  - 3.3. Interactive Multi-objective Model Analysis
  - 3.4. Analysis of Discrete Alternatives
4. Structure and Use of Model-Based DSSs
5. Advantages and Limitations of Model-Based DSS

### **Decision Support Systems for Environmental Problems at Different Scales** 41

Marek Makowski, *International Institute for Applied Systems Analysis, Laxenburg, A-2361 Austria*

1. Introduction
2. Regional water quality management
  - 2.1. The Problem

- 2.2. Model Formulation
- 2.3. Structure of the DSS
- 2.4. Experiences from using RWQM
3. Land use planning
  - 3.1. The Problem
  - 3.2. The AEZ Land Use Allocation Model
    - 3.2.1. A Summary of the AEZ Methodology
    - 3.2.2. The core model constraint set
    - 3.2.3. Decision variables
    - 3.2.4. Outcome variables
  - 3.3. DSS for Land Use Planning
  - 3.4. Experiences on using AEZWIN
4. Air quality management
  - 4.1. The problem
  - 4.2. Specification of the RAINS core model
    - 4.2.1. Notation
    - 4.2.2. Decision variables
    - 4.2.3. Outcome variables
    - 4.2.4. Constraints
  - 4.3. Model generation and data handling
  - 4.4. Analysis of the RAINS model
  - 4.5. Experiences from using RAINS
5. Lessons from the presented DSSs

### **Validation and Uncertainty in Analysis Decision Support**

78

Ioana Moisil, "Lucian Blaga" University of Sibiu, Romania

1. Introduction
2. Validation of Decision Support Systems
  - 2.1. Validation Process
  - 2.2. Validation Techniques
3. Uncertainty in Decision Support Systems
  - 3.1. Sources of Uncertainty in a DSS
    - 3.1.1. Natural Uncertainty and Variability
    - 3.1.2. Parametric/Data Uncertainty
    - 3.1.3. Model Uncertainty
    - 3.1.4. Observational Uncertainty
  - 3.2. Variety of Uncertain Information
  - 3.3. Formal Approaches to Uncertainty
    - 3.3.1. Probability Theory
    - 3.3.2. Fuzzy Set Theory
    - 3.3.3. Possibility Theory
4. Validity and Uncertainty Analysis

### **System to Support Decisions on Sustainable Development: Integrated Assessment**

95

Reinhard Coenen, *Forschungszentrum Karlsruhe GmbH, ITAS- Inst. Für Technology Assessment and Systems Analysis, Germany*

Torsten Asselmeyer-Maluga, *Fraunhofer Institute for Computer Architecture and Software Technology, Germany*

1. Introduction
2. Definition of Sustainable Development
3. Operationalization of the Concept of Sustainable Development
4. Sustainability Indicators as a Further Step in Operationalizing Sustainable Development
5. Sustainable Global Development - The Integrative Concept
6. Decision Support System - General Aspects

## 7. Information Technology and Environmental Systems

**Knowledge Based Systems and Neural Nets****112**R. Moreno-Díaz, *Institute of Cybernetics, University of Las Palmas de Gran Canaria, Spain*R. Moreno-Díaz Jr., *Institute of Cybernetics, University of Las Palmas de Gran Canaria, Spain*

1. Introduction
2. Knowledge-based Systems
  - 2.1. Definitions and Scope
  - 2.2. KBS Levels
  - 2.3. Knowledge Representation and Knowledge Acquisition
  - 2.4. Description of some KBSs
3. Neural Nets
  - 3.1. Formal Neural Nets
  - 3.2. Natural Neural Nets: Modeling
  - 3.3. Artificial Neural Nets

**System to Support Decisions on Clean-Up of Polluted Lands****124**P.-W. Graeber, *Department of Hydrosience, Dresden University of Technology, Germany*

1. Introduction
2. Questions on Cleanup Strategy
3. Hydrogeological Foundation
  - 3.1. Pumping Wells
  - 3.2. Plane Filtration
  - 3.3. One-dimensional Transport of Substances
  - 3.4. Multiphase Flow
4. The Rule-based Map-orientated Analysis
5. Problems of Measurement Values
  - 5.1. Introduction
  - 5.2. Possibilities of Groundwater and Soil Monitoring
  - 5.3. Hierarchical Closed-loop Controlling System

**Systems to Support Decisions on Electric Power Generation****141**Christopher Koroneos, *Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*Agis M. Papadopoulos, *Laboratory of Heat Transfer and Environmental Engineering, Department of Mechanical Engineering, Aristotle University of Thessaloniki, Greece*

1. Introduction
2. Electricity Production Systems
  - 2.1. Fossil Fuel Power Plants
    - 2.1.1. Pulverized Fuel Combustion
    - 2.1.2. Atmospheric Fluidized Bed Combustion
    - 2.1.3. Combined Cycled Power Generation
      - 2.1.3.1. Natural Gas Fired Combined Cycles (NGCCs)
      - 2.1.3.2. Natural Gas Integrated Combined Cycles (NGICC)
      - 2.1.3.3. Natural Gas-fired Gas Turbine and Coal-fired Boilers
      - 2.1.3.4. Integrated Gasification Combined Cycles (IGCCs)
    - 2.1.4. Pressurized Fluidized Bed Combustion (PFBC)
    - 2.1.5. Pressurized Pulverized Combustion (PPC)
    - 2.1.6. Fuel Cells
  - 2.2. Renewable Energy Power Plants
    - 2.2.1. Geothermal Energy
      - 2.2.1.1. Hydro-thermal

- 2.2.1.2. Hot Dry Rock
- 2.2.2. Photo-voltaic Technology
  - 2.2.2.1. Residential Photovoltaics
  - 2.2.2.2. Utility-Scale Flat-Plate Thin Film Photovoltaics
  - 2.2.2.3. Utility-scale Photovoltaic Concentrators
- 2.2.3. Solar-thermal Power
- 2.2.4. Wind Energy
- 2.2.5. Hydropower
- 3. Contribution of Energy Resources to World Electricity Production
- 4. Energy Storage, Efficiency of Production, and Waste Heat
  - 4.1. Technological Inadequacy of Energy Storage
  - 4.2. Inefficiency of Electricity Production
  - 4.3. Waste Heat Management
- 5. Appraisal of Investments in Electricity Production Systems
- 6. Expansion of Production vs. Demand Side Management
- 7. External Cost Factors
- 8. Optimization of Energy Mixture in Power Generation Systems

### **Decision Support Systems For Energy, Traffic And Environmental Management 185**

Kurt Fedra, *Environmental Software & Service Group, GmbH, Advanced Computer Applications, Austria*  
 Alain B. Haurie, *Management Studies (SES-HEC), Faculty of Economics and Social Sciences, University of Geneva, Switzerland*

- 1. Introduction
- 2. Spatial analysis and optimization models
- 3. A dynamic multi-time scale system representation of the air quality management problem
  - 3.1. Pollution Dispersion Dynamics
  - 3.2. Emissions Generation by Economic Activities
  - 3.3. Emission Controls
  - 3.4. Objectives and Constraints
  - 3.5. The Regulator
  - 3.6. Time scales
- 4. A heuristic for solving the regulators problem
  - 4.1. A Decomposition Approach
  - 4.2. Computing the Marginal Costs
- 5. A Multi-criteria Air Quality Management Model
  - 5.1. Emission/Immission Optimization
  - 5.2. The Discrete Multi-criteria Approach
- 6. Implementation
- 7. Discussions

### **Decision Support Systems for Urban and Regional Planning 208**

Alexandra Carvalho, *Florida Institute of Technology, Florida, USA*

- 1. Introduction
- 2. Population Growth
  - 2.1. Population Growth Rate
  - 2.2. Population Migration Patterns
    - 2.2.1. Migration Patterns due to Geographic Location
    - 2.2.2. Migration Patterns due to the Degree of Development of the Country
- 3. Urbanization
  - 3.1. Policies that Control Human Relocation and Development in Urban Areas
  - 3.2. Sustainable Development in Coastal Areas
- 4. Decision Support Systems (DSS) for Regional and Urban Planning
  - 4.1. Components of a Decision Support System
  - 4.2. Geographic Information Systems (GIS)

- 4.2.1. Assessment of Environmental and Social Impacts
- 4.2.2. Multi Criteria Evaluation and Decision Making
- 4.2.3. Land Suitability Analysis
- 4.3. Engelen and White's Simulation Model Using Constrained Cellular Automata
- 4.4. Comparing Scenarios and Ranking Alternatives within a Decision Support System
- 5. Conclusions

### **Systems to Support Decisions for Urban Areas**

222

Hiroyuki Tamura, *Department of Systems and Human Science, Graduate School of Engineering Science, Osaka University, Japan*

- 1. Introduction
- 2. Environmental Impact Assessment and Multi-attribute Impact Theory
  - 2.1. Expected Utility Hypothesis
  - 2.2. Single Attribute Disutility Function
  - 2.3. Multi-attribute Disutility Function
  - 2.4. A Case Study: EIA of Road Traffic and Evaluation of Countermeasures
- 3. Consensus Formation and Multi-Agent Decision-making
  - 3.1. A Group Disutility Function for Multi-Agent Decision-making
  - 3.2. A Case Study: Consensus Formation Modeling for EIA of Road Traffic
- 4. Risk Management and Value Function under Risk
  - 4.1. Problem Statement of a Decision-making Problem
  - 4.2. Mathematical Modeling
  - 4.3. Numerical Results
- 5. Concluding Remarks

### **Diverse Perspectives Of Sustainability**

240

Ganti Prasada Rao, *Member, UNESCO-EOLSS Joint Committee, Abu Dhabi, UAE*

- 1. Introduction
- 2. Thermodynamics of Sustainable Development: A Natural Sciences Perspective
- 3. A Systems and Control Perspective of Sustainable Development
  - 3.1. Human Engineered System and the Natural Environment
  - 3.2. Weak Sustainability and Strong Sustainability
  - 3.3. Paradigm of Industrial Ecology for Sustainable Development
  - 3.4. Need for Reorganization of the Ways of Life in the Anthroposphere
  - 3.5. Observing the Process of Development
  - 3.6. Disturbances and Development
  - 3.7. *Development as Freedom*: Amartya Sen's Thesis
  - 3.8. Kant's Ethical Perspective of Freedom
- 4. Need for Transdisciplinary Pathways between Disciplines for a Holistic Perspective
- 5. Conclusion

### **Environmental Information Services And Computational Intelligence**

264

Kostas Karatzas, *Mechanical Engineering Department, Aristotle University of Thessaloniki, 54124 Thessaloniki, Greece*

- 1. Introduction
- 2. The Problem Domain: Urban Atmospheric Quality
- 3. Paving the Scene: Choose the Parameters of Interest
- 4. Be Informed In Advance: Operational Air Quality Forecasting
- 5. Computational Intelligence Methods for AQ Forecasting
- 6. Construction of Operational Prediction Models
  - 6.1. Data Preprocessing
  - 6.2. CI Method Selection

- 6.3. CI Application Example
  - 6.3.1. Computational experimental strategy
- 7. Information Services for the Atmospheric Environment
  - 7.1. Air Quality Information Systems
- 8. An AQ Information Service Example.
- 9. Quality Of Life Information Services for the Atmospheric Environment: The Future.
- 10. Conclusions

### **Numerical Flood Simulation By Depth Averaged Free Surface Flow Models 284**

A. I. Delis, *Department of Sciences, Technical University of Crete, Chania, Crete, Hellas. Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Heraklion, Crete, Hellas.*

N. A. Kampanis, *Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Heraklion, Crete, Hellas.*

- 1. Introduction
- 2. Mathematical Modeling of Flood Propagation
  - 2.1. Navier-Stokes (NS) and Related Models
  - 2.2. Depth Averaged Models (2D Shallow Water Equations)
    - 2.2.1. Saint-Venant (SV) Equations for Channel Flows
    - 2.2.2. Conservative or Non-Conservative Form?
- 3. Numerical Modeling for Flood Propagation in Natural Topographies
  - 3.1. Spatial Discretization Strategies for the 2D SW Equations
  - 3.2. Numerical Flux Functions
    - 3.2.1. Roe's Riemann Solver Numerical flux
    - 3.2.2. HLL-Type Riemann Solver Numerical Flux
    - 3.2.3. Higher Order Schemes with MUSCL Extrapolation
  - 3.3. Time Integration
  - 3.4. Bed Topography and Friction Terms Discretization
  - 3.5. Wetting and Drying
  - 3.6. Boundary Conditions
  - 3.7. Topography Modeling
- 4. Benchmarking and Validation
  - 4.1. Flood Event in the Toce River
  - 4.2. The Malpasset Dam-Break
- 5. Concluding Remarks

### **An Assessment of the Vulnerability to Erosion of the Coastal Zone Due to a Potential Rise of Sea Level: The Case of the Hellenic Aegean Coast 324**

G. Alexandrakis, A. Karditsa, S. Poulos, G. Ghionis, *Faculty of Geology & Geoenvironment, Department of Geography & Climatology, University of Athens, Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Hellas.*

N.A. Kampanis, *Institute of Applied and Computational Mathematics, Foundation for Research and Technology, Hellas*

- 1. Introduction
- 2. Coastal Vulnerability Index (CVI)
- 3. The Aegean Sea: Physicogeographic setting.
- 4. Coastal Vulnerability of the Hellenic Aegean Coast.
  - 4.1. Controlling Variables
    - 4.1.1. Geomorphology
    - 4.1.2. Shoreline Displacement (Erosion or Accretion)
    - 4.1.3. Coastal Slope
    - 4.1.4. Relative Sea Level Change
    - 4.1.5. Offshore Wave Climate
    - 4.1.6. Tidal Data and Sea-level Rise

- 4.2. Calculation of the CVI
- 5. Discussion and Conclusions
