CONTENTS

Statistical Analysis of Ecological Diversity **1**
Lorenzo Fattorini, *Dipartimento di Metodi Quantitativi, Universit di Siena, Italy*

1. Introduction
2. Defining and Measuring Ecological diversity
   2.1. Shannon index
   2.2. Alternative Diversity Indexes
   2.3. Average Rarity Diversity Indexes
   2.4. Species-Abundance curves
   2.5. Related issues
3. Abundance Estimation
   3.1. Simple Random Sampling
   3.2. Replicated Encounter Sampling
   3.3. Alternative Sampling Strategies.
4. Statistical Inference on Diversity
   4.1. Design-Based Inference
   4.2. Estimation of Species Richness
   4.3. Model-based inference
5. Ecological Diversity Ordering
   5.1. Intrinsic Diversity Ordering
   5.2. Profile estimation
   5.3. Assessing diversity ordering
6. Field Studies

Descriptive Measures of Ecological Diversity **29**
B. V. Frosini, *Institute of Statistics, Catholic University of Milan, Italy*

1. Diversity, richness, evenness
   1.1. Introduction to Essential Properties
   1.2. A Comprehensive List of Diversity Indices
   1.3. Richness
   1.4. Evenness and Normalization of Diversity Indices
2. General properties of diversity indices
   2.1. Statistical Proposals of General Properties
   2.2. Diversity and Inequality
   2.3. Majorization and Lorenz Curve
3. Special indices and families of indices
   3.1. Gini-Simpson Indices and Generalizations
      3.1.1. Derivation of the Gini-Simpson Index
      3.1.2. A family of Indices Depending on the Euclidean Distance
      3.1.3. Rao's Family based on Dissimilarity Coefficients
   3.2. Diversity Indices based on Distances between Distributions
   3.3. Shannon and Entropy Measures
   3.4. Diversity Indices Derived from Averages

Sampling Designs for Monitoring Ecological Diversity **58**
L. Barabesi, *Department of Quantitative Methods, University of Siena, Italy*

1. Introduction
2. Unit sampling
   2.1. Sampling by plots
   2.2. Sampling by points
   2.3. Sampling by lines

3. Area sampling
   3.1. Simple random sampling of areas
   3.2. πps sampling of areas
4. Further developments: two-stage sampling

Inference on Ecological Diversity **78**
T. Di Battista, *Dipartimento di Metodi Quantitativi e Teoria Economica, Università "G. d'Annunzio", Italy*

1. Introduction
2. Diversity index estimation
   2.1. General Results
   2.2. Inference for some specific Diversity Indexes under SRS
   2.3. Jackknife for Diversity Index Estimation
   2.4. Bayesian Approach to Diversity Index Estimation
3. Species-abundance curve models
   3.1. Negative Binomial Distribution
   3.2. Logarithmic Series Distribution
   3.3. Geometric Distribution and Broken-Stick Distribution
   3.4. Lognormal series distribution

The Inventory and Estimation of Plant Species Richness **94**
A. Chiarucci, *Dipartimento di Scienze Ambientali, Università di Siena, Italy*
M.W. Palmer, *Botany Department, Oklahoma State University, USA*

1. Introduction
2. Species Inventorying
   2.1. Traditional Collection of Species Data
   2.2. Methods for Perfecting Species Lists
3. Estimating and Comparing Species Richness through Samples
   3.1. Fitting Species Abundance Distributions
   3.2. Estimation Derived from Species Accumulation Curves and Species Area Curves
   3.3. Non-parametric Estimators
   3.4. Taxon-surrogacy and Higher-taxon Approaches
4. Conclusion

Spatial Statistics **117**
Dale L. Zimmerman, *Department of Statistics and Actuarial Science, University of Iowa, USA*

1. Introduction
2. Models
   2.1. Geostatistical Models
   2.2. Lattice Models
   2.3. Spatial Point Processes
3. Exploring Spatial Structure
   3.1. Geostatistical Data
   3.2. Lattice Data
   3.3. Spatial Point Patterns
4. Estimation
5. Prediction
6. Future Directions

Geostatistics: Past, Present and Future **141**
Mark D. Ecker, *Department of Mathematics, University of Northern Iowa, Cedar Falls, IA, USA*

1. Introduction
2. Distribution-Free Methodology
3. Likelihood-Based Modeling
4. Model Based Prediction
5. Discussion and Future Directions

Spatial Design **163**
Werner G. Müller, *Department of Statistics, Vienna University of Economics, Austria*

1. Introduction
2. A statistical framework
3. Single purpose spatial designs
   3.1. Optimum Designs for Trend Estimation (Uncorrelated Processes)
   3.2. Exploratory Designs
   3.3. Optimum Designs for Trend Estimation (Correlated Processes)
   3.4. Optimum Designs for Spatial Prediction
   3.5. Optimum Designs for Covariogram Estimation
4. Multipurpose spatial designs
   4.1. Constrained and Compound Designs
   4.2. Entropy Sampling
5. Relationships among design criteria
6. Conclusions and Outlook

Statistical Analysis of Spatial Count Data **177**
Mark S. Kaiser, *Department of Statistics, Iowa State University, USA*

1. Introduction
2. Random Spatial Indices
3. Non-Random Spatial Indices
   3.1. Models with Continuous Spatial Index
   3.2. Models with Discrete Spatial Index
      3.2.1. Markov Random Field Models
      3.2.2. Models with Exponential Family Conditionals
      3.2.3. Estimation and Prediction
      3.2.4. Application to Spatial Counts
4. Spatial Epidemiology and Disease Mapping
   4.1. Spatial Epidemiology
   4.2. Disease Mapping

Spatial Disease Mapping **197**
Lance A. Waller, *Department of Biostatistics, Rollins School of Public Health, Emory University, USA*

1. Introduction
2. Reasons for spatial patterns in disease data
3. Types of spatial disease data
   3.1. Point Data
   3.2. Regional Data
   3.3. Geostatistical Data
4. Analytic methods by data type
   4.1. Analytic Methods for Point Data
   4.2. Analytic Methods for Regional Data
   4.3. Analytic Methods for Geostatistical Data
5. Future Trends

Multivariate Data Analysis **208**
S. B. Provost, *Statistical and Actuarial Sciences, The University of Western Ontario, London, Ontario, Canada*
E. M. Rudiuk, *Physical and Applied Sciences, University College of Cape Breton, Sydney, Nova Scotia, Canada*

1. Introduction
2. Multivariate Distributions
   2.1. The Multivariate Normal Distribution
   2.2. Elliptically Contoured Distributions
   2.3. The Wishart Distribution
3. Parameter Estimation for a Multivariate Normal Population
4. Tests of Hypotheses for Mean Vectors and Covariance Matrices
5. The General Linear Hypothesis Model
   5.1. Multiple Regression and Correlation
   5.2. Multivariate Analysis of Variance
6. Discriminant Analysis
7. Principal Components
8. Factor Analysis

The Analysis of Putative Sources of Health Hazard **231**
Andrew B. Lawson, *Department of Epidemiology and Biostatistics, University of South Carolina, Columbia, South Carolina, USA*

1. Introduction
2. Study Design
   2.1. Retrospective and Prospective Studies
   2.2. Study Region Design
      2.2.1. Region Size
      2.2.2. Region Shape
   2.3. Replication and Control
3. Problems of Inference
   3.1. Exploratory Techniques
4. Modeling the Hazard Exposure Risk
   4.1. The Specification of $f\left(\mathbf{x};\theta\right)$ in the Case Intensity
5. Models for Case Event Data
   5.1. Estimation
   5.2. Hypothesis Tests
6. Models for Count Data
   6.1. Estimation
   6.2. Hypothesis Tests

Spatio-Temporal Methods in Climatology **250**
Christopher K. Wikle, *Department of Statistics, University of Missouri-Columbia, USA*

1. Introduction
2. Descriptive Statistical Methods
   2.1. Empirical Orthogonal Function (EOF) Analysis
      2.1.1. Continuous K-L Formulation
      2.1.2. Discrete EOF Analysis
      2.1.3. Estimation of EOFs
      2.1.4. Complex EOF Analysis
      2.1.5. Multivariate EOF Analysis
      2.1.6. Extended EOF Analysis
   2.2. Principal Oscillation Pattern (POP) Analysis

2.2.1. Formulation of POPs
2.2.2. Physical Implication of POPs
2.2.3. Estimation of POPs
2.2.4. Diagnostic Applications of POPs
2.2.5. Prognostic Application of POPs
2.2.6. POPs in Continuous Time
2.2.7. Complex POPs
2.2.8. Cyclostationary POPs
2.3. Space-Time Canonical Correlation Analysis (CCA)
2.3.1. Two-Field SpatialTemporal CCA
2.3.2. Estimation of CCA
2.3.3. Time Lagged CCA
2.4. Space-Time Spectral Analysis
3. Future Directions

Rank Tests For Independence And Randomness **273**
Martin Schindler, *Department of Statistics, Charles University, Prague, Czech Republic*

1. Introduction
2. Rank Tests for Independence
2.1. Optimal Tests
2.2. Treatment of Ties
3. Tests for Randomness against trend
4. Contingency Tables:

Area Precipitation Measurement **290**
Teresa Alpuim, *CMAF and DEIO, University of Lisbon, Portugal*

1. The Area Precipitation Measurement Problem
2. The Kalman Filter Approach
2.1. A State Space Representation of the Problem
2.2. The Kalman Filter Algorithm
2.3. Estimating the Model Parameters
2.4. Final Adjustments and Assessment of the Models
3. The Cokriging Approach
3.1. The Kriging Estimator
3.2. The Cokriging Estimator
4. Conclusions

Water-Quality Monitoring of Rivers **312**
Richard P. Hooper, *U.S. Geological Survey, 10 Bearfoot Road, Northborough, MA 01532 USA*
Leslie DeSimone, *U.S. Geological Survey, 10 Bearfoot Road, Northborough, MA 01532 USA*

1. Introduction
2. Design Considerations for Water-Quality Monitoring Networks
2.1. Monitoring Objectives
2.2. Monitoring Approaches
2.2.1. Time Period for Measurement
2.2.2. Methods of Site Selection
2.2.3. Chemical vs. Biological Monitoring
2.3. Interpretive Context
3. Case Studies from the United States
3.1. Revised NASQAN
3.2. Maryland and Delaware Statewide Biomonitoring Assessments
3.3. Massachusetts Comprehensive Monitoring Design

4. The Future of Water-Quality Monitoring Networks

Stochastic Modeling in Life Support Systems 330
George Christakos, *School of Public Health, University of North Carolina at Chapel Hill, NC; and Department of Geography, San Diego State University, CA, USA*

1. The Concept of Stochastic Modelling
2. SM Metaphors and Reality Levels
3. Spatiotemporal Random Field Models
4. Towards an SM Program
5. Mathematical Forms of Natural Laws Considered in SM Applications
6. SM in Genetic Research, Carcinogenesis and Toxicokinetics applications
7. The Importance of Physical Geometry and Space/Time Scales
8. Knowledge Integration and the Epistemic Approach to Space/time
9. Decision Making, Geographical Information Systems, and Sampling Design
10. Physical Indicator Functions
11. Population Indicator Functions
12. Risk Assessment and Environmental Exposure-Health Effect Associations
13. Conclusions

Economic Aspects of Monitoring Environmental Factors: A Cost-Benefit Approach 364
SM Osman Rahman, *Department of Agricultural Economics, University of Idaho, Moscow, ID 83844-2334, USA*
Stephen Devadoss, *Department of Agricultural Economics, University of Idaho, Moscow, ID 83844-2334, USA*

1. Introduction
    1.1. Importance of Cost-Benefit Analysis (CBA) in the Decision Making Process
    1.2. A Brief Review of the Use of Economic Instruments for Environmental Policy
2. Setting Environmental Standards
    2.1. Quantifying Indicators
        2.1.1. Emissions
        2.1.2. Conservation
        2.1.3. Bio-diversity
3. Economic Implications of Adopting Environmental Standards
    3.1. Difficulties with Neo-classical Economic Approach Toward Environmental Valuation
        3.1.1. Missing and Incomplete Markets
        3.1.2. Failure of Price Mechanism
4. Environmental Valuation
    4.1. Direct Valuation Techniques
        4.1.1. Contingent Valuation Method (CVM)
        4.1.2. Travel Costs Method (TCM)
        4.1.3. Hedonic Price Analysis (HPA)
        4.1.4. Value of Life
    4.2. Indirect Valuation Methods
        4.2.1. Impact of Pollution on Health, Material Corrosion and Vegetation Damage
    4.3. Problems with Environmental Benefits Estimates
        4.3.1. The Rate of Discount
        4.3.2. Irreversibility
5. Environmental Policy Regulations
    5.1. Command and Control Policies
    5.2. Economic Instruments (EI)
6. Conclusion

Trend Analysis for Environmental Factors: Time Effects on Nitrous Oxide (N_2O) Levels at Mace Head, Ireland **387**
V. K. Jandhyala, *Washington State University, USA*
S. B. Fotopoulos, *Washington State University, Pullman, USA*
N. E. Evangelopoulos, *University of North Texas, Denton, USA*

1. Introduction
2. The Global Atmospheric Gases Experiment
3. Nitrous Oxide Levels at Mace Head
4. Identifying Trends
5. Trend Analysis for Variance Change
   5.1. Problem Formulation
   5.2. Detection of the Unknown Change-Point
   5.3. Estimating the Unknown Change-Point
6. Change-Point Analysis of Nitrous Oxide Levels
7. Conclusions
