

CONTENTS

BIOMETRICS

Biometrics - Volume 1

No. of Pages: 340

ISBN: 978-1-905839-36-0 (eBook)

ISBN: 978-1-84826-936-1 (Print Volume)

Biometrics - Volume 2

No. of Pages: 464

ISBN: 978-1-905839-37-7 (eBook)

ISBN: 978-1-84826-937-8 (Print Volume)

CONTENTS

VOLUME I

Modern Biometry

1

Susan R. Wilson, *School of Mathematical Sciences, Australian National University, Australia*

1. Introduction
2. History
3. Biometric Data Collection and Analysis
 - 3.1. Experimental Design
 - 3.2. Sample Surveys
 - 3.3. Graphical Displays
 - 3.4. Multivariate and Multidimensional Analysis
 - 3.5. Linear Models and Generalized Linear Models
 - 3.6. Categorical Data Analysis
 - 3.7. Survival Analysis and Risk
 - 3.8. Meta-Analysis
 - 3.9. Bayes and Empirical Bayes
 - 3.10. Computer-Intensive Biometrical Methods
 - 3.11. Nonparametric Methods
 - 3.12. Time Series
 - 3.13. Longitudinal Studies
 - 3.14. Spatial Analysis
 - 3.15. Image Analysis
4. Biometry in Action
 - 4.1. Agriculture
 - 4.2. Forestry
 - 4.3. Statistical Ecology and Biodiversity
 - 4.4. Morphometrics and Stereology
 - 4.5. Bioassay and Toxicology
 - 4.6. Infectious Disease Epidemiology
 - 4.7. Genetics
 - 4.8. Bioinformatics and Genomics
 - 4.9. Public Health and Biomedicine
 - 4.9.1. The Case-Control Study
 - 4.9.2. The Cohort Study
 - 4.9.3. Clinical Trials
5. Mathematics in Biometry
6. Future

Data Collection and Analysis in Biometrics

34

Lynne Billard, *Department of Statistics, University of Georgia, Athens, GA USA*

1. Introduction
2. Experimental Design
3. Sample Surveys
4. Clinical Trials and Case Control Studies
 - 4.1. Clinical Trials
 - 4.2. Case Control Studies
5. Longitudinal Studies and Time Series
 - 5.1. Longitudinal Studies
 - 5.2. Time Series
6. Species Abundance
7. Data Collection
8. Conclusion

The Design of Experiments 51Lynne Billard, *Department of Statistics, University of Georgia, Athens, GA USA*

1. Introduction
2. Standard Factorial Designs
3. Split-Plot Designs
4. Repeated Measures Designs
5. Importance of Correct Design and Analysis
6. Conclusion

Sample Surveys 70Sharon L. Lohr, *Department of Mathematics and Statistics, Arizona State University, USA*

1. What is a Survey?
2. Probability Sampling
3. Common Probability Sampling Designs
 - 3.1. Simple Random Sampling
 - 3.2. Stratified Sampling
 - 3.3. Cluster Sampling
 - 3.4. Unequal Probability Sampling
 - 3.5. Systematic Sampling
 - 3.6. Stratified Multistage Sampling
4. Survey Estimates and Standard Errors
5. Nonsampling Errors
6. Sampling Rare Populations
7. Issues in Survey Design

Response Adaptive Randomization in Clinical Trials 84Anand N. Vidyashankar, *Department of Statistics, University of Georgia, Athens, GA, USA*

1. Introduction
2. The Design
3. Likelihood Based Inference
4. Nonparametric Inference
5. Regression Models
6. Conclusions

Time Series Models 92Lynne Billard, *Department of Statistics, University of Georgia, Athens, GA USA*

1. Introduction
2. Standard Linear ARMA Models
3. Bilinear Models
4. Standard Space Time ARMA Models
5. Space Time Bilinear Models
6. Exponential Models

Estimating Species Abundance 107Gavin J. Melville, *New South Wales Department of Primary Industries, Australia*Alan Hepburn Welsh, *Mathematical Sciences Institute, Australian National University, Australia*

1. Introduction
2. Quadrat Sampling
 - 2.1. Design-Based Quadrat Sampling

- 2.2. Model-based Quadrat Sampling
- 2.3. Quadrat Size
- 3. Adaptive Cluster Sampling
- 4. Line and Point Transect Sampling
 - 4.1. The Classical Approach
 - 4.2. Methodological Issues
 - 4.3. The Calibration Approach
- 5. Nearest-Neighbor Distance Methods
 - 5.1. Homogeneous Poisson Processes
 - 5.2. Alternatives to Homogeneous Poisson Processes
 - 5.3. Nonparametric Methods
 - 5.4. Edge Correction
- 6. Capture-Recapture Methods
 - 6.1. A Single Recapture
 - 6.2. Multiple Recaptures
 - 6.3. Related Methods

Statistical Methodology in Biometry

129

Geert Molenberghs, *Limburgs Universitair Centrum, Hasselt University, Belgium*

- 1. Introduction
- 2. Linear Regression, Generalized Linear Models, Exponential Family and Logistic Regression
 - 2.1. Gaussian Outcomes
 - 2.2. Non-Gaussian Outcomes
 - 2.3. Regression Models for Ordinal Data
- 3. Hierarchical Data
 - 3.1. Multivariate Analysis
 - 3.2. Longitudinal and Other Hierarchical Data
 - 3.3. The Linear Mixed Model
 - 3.4. From Gaussian to Non-Gaussian Longitudinal Data
- 4. Survival Analysis

Linear Regression Models

149

Fabian Tibaldi, *Limburgs Universitair Centrum, Hasselt University, Belgium*

- 1. Introduction
- 2. Simple Linear Regression model
 - 2.1. The Model
 - 2.2. Estimation
 - 2.3. Inference
 - 2.3.1. Inferences about the Regression Coefficients
- 3. Diagnostics and Remedial Measures
- 4. Multiple Linear Regression Model
 - 4.1. Estimation of Regression Coefficients
 - 4.2. Inferences About Regression Coefficients
- 5. Model Adequacy and Diagnostics
- 6. Comments on Interpreting Regression Analysis

Generalized Linear Modeling

160

Helena Geys, *Limburgs Universitair Centrum, Hasselt University, Belgium*

- 1. Introduction
- 2. A Corner Stone: the Exponential Family of Distributions
- 3. Generalized Linear Modeling
- 4. Estimation for Generalized Linear Models

5. Quasi-likelihood and Generalized Estimating Equations (GEE)
 - 5.1. GEE1
 - 5.2. GEE2

Categorical Data Analysis**172**Stuart R. Lipsitz, *Medical University of the South Carolina, USA*Garret M. Fitzmaurice, *Harvard School of Public Health, Boston, MA, U.S.A*

1. Introduction
2. Inference for a Single Proportion
3. Analysis of 2×2 Contingency Tables
4. Analysis of $R \times C$ Contingency Tables
5. Analysis of Sets of 2×2 Contingency Tables
6. Log-linear Models
7. Logistic Regression
8. Multinomial Regression Models
9. Poisson Regression
10. Clustered Categorical Data

Survival Analysis**191**David G. Kleinbaum, *Department of Epidemiology, Rollins School of Public Health, Emory University, Atlanta, Georgia, U.S.A*Deborah L. Christensen, *Department of Epidemiology, Rollins School of Public Health, Emory University, Atlanta, Georgia, U.S.A*Samantha Yang Rowe, *US Centers for Disease Control and Prevention, Atlanta, GA, USA*

1. Introduction
2. Basic Concepts of Survival Analysis
 - 2.1. Censoring
 - 2.2. Terminology and Notation
 - 2.3. Goals of Survival Analysis
 - 2.4. Basic Analysis Layout for Survival Analysis
 - 2.5. Descriptive Measures of Survival Experience
3. The Kaplan-Meier Method and the Log-rank Test
 - 3.1. Kaplan-Meier Curves
 - 3.1.1. Analysis layout for Kaplan-Meier Curves
 - 3.1.2. Calculation of Estimated Survival Probabilities
 - 3.2. The Log-rank Test
 - 3.2.1. The Log-rank Test for Two Groups
 - 3.2.2. The Log-rank Test for Several Groups
 - 3.3. The Wilcoxon Test
4. The Cox Proportional Hazards Model
 - 4.1. Properties of the Cox PH Model
 - 4.2. Testing the Significance of Interaction
 - 4.3. Computing and Interpreting the Hazard Ratio from the Cox PH Model
 - 4.4. Calculating a Confidence Interval for the Hazard Ratio
 - 4.5. Adjusted Survival Curves using the Cox PH Model
5. Evaluating the Proportional Hazards Assumption
 - 5.1. The Proportional Hazards Assumption
 - 5.2. A Graphical Method for Evaluating the PH Assumption: Log-log Survival Curves
 - 5.3. Using Time-dependent Variables
 - 5.4. Goodness-of-fit (GOF) Tests
6. The Stratified Cox Model
 - 6.1. Properties of the Stratified Cox Model
 - 6.2. Testing the No-interaction Assumption in the SC Model
7. Extension of the Cox Proportional Hazards Model for Time-dependent Variables

- 7.1. Time-dependent Variables
- 7.2. Using Time-dependent Variables to test the Proportional Hazards Assumption
- 7.3. The Extended Cox Model for Time-dependent Variables
 - 7.3.1. The Hazard Ratio Formula for the Extended Cox Model
- 7.4. Use of the Extended Cox Model versus the Stratified Cox Model

Multivariate and Multidimensional Analysis

222

Kristel Van Steen, *Harvard School of Public Health, Boston, MA, U.S.A*

Geert Molenberghs, *Limburgs Universitair Centrum, Hasselt University, Belgium*

1. Introduction
2. Continuous Outcomes
 - 2.1. Multivariate Linear Regression
 - 2.2. Multivariate Analysis of Variance and Covariance
 - 2.3. Canonical Correlation and Redundancy Analysis
 - 2.4. Structural Equation Modeling and Path Analysis
 - 2.5. Discriminant and Cluster Analysis
 - 2.6. Linear Projection Methods
 - 2.6.1. Principal Components and Factor Analysis
 - 2.6.2. Projection Pursuit
 - 2.7. Non-linear Projection Methods
 - 2.7.1. Multidimensional Scaling
3. Non-continuous Outcomes
4. Graphical Analysis
 - 4.1. Pre- and Post-Modeling
 - 4.2. Graphical Modeling
5. A Magician at Work?
6. Concluding Remarks

Repeated Measures and Multilevel Modeling

237

Geert Verbeke, *Katholieke Universiteit Leuven, Leuven, Belgium*

Geert Molenberghs, *Limburgs Universitair Centrum Hasselt University, Belgium*

1. Introduction
2. General Model
3. Some Models for Continuous Data
 - 3.1. Multivariate Linear Regression Models
 - 3.2. Linear Mixed Models
 - 3.3. Non-linear Mixed Models
4. Models for Discrete Data
 - 4.1. Conditional Model
 - 4.2. Marginal Models
 - 4.2.1. The Bahadur Model
 - 4.2.2. The Dale and Probit Models
 - 4.3. Random-effects Models
 - 4.3.1. The Beta-binomial Model
 - 4.3.2. The Generalized Linear Mixed Model
5. Generalized Estimating Equations
6. Discussion

Meta-Analysis

256

Marc Eric Buyse, *Executive Director, International Drug Development Institute, Brussels, Belgium*

1. Introduction
2. Types of Meta-analyses

3. Statistical Principles of Meta-analysis
 - 3.1. Estimation
 - 3.2. Stratification
 - 3.3. Heterogeneity
 - 3.4. Interaction
4. Statistical models for Meta-analysis
 - 4.1. Fixed Effects Models
 - 4.1.1. Test for Treatment Effect
 - 4.1.2. Estimate of Overall Treatment Effect
 - 4.1.3. Test for Heterogeneity
 - 4.1.4. Test for Interaction
 - 4.1.5. Test for Trend
 - 4.2. Random Effects Models
 - 4.3. Bayesian Models
5. An Example of Meta-analysis
 - 5.1. Tests for Treatment Effect and Heterogeneity
 - 5.2. Graphical Display
 - 5.3. Tests for Trend and Interaction
6. Further Topics in Meta-analysis
 - 6.1. Weighted, Cumulative, and Prospective Meta-analysis
 - 6.2. Further Uses of Meta-analysis
 - 6.3. Meta-regression

Index 273

About EOLSS 279

VOLUME II

Computation and Biometry	1
<i>John Hilary Maindonald, Centre for Bioinformatics Science, Australian National University, Australia</i>	

1. Introduction
 - 1.1. Scope of This Chapter
 - 1.2. Statistics in the Pre-Computer Era
 - 1.3. Prospects for the Short-Term Future
2. Computer Language and Systems– Past, Present and Future
 - 2.1. The Beginnings of Scientific Computing
 - 2.2. High Level versus Low Level Languages
 - 2.3. Unfulfilled Promises
 - 2.4. Constraints on Future Development
3. Changing Views of Statistical Computing
 - 3.1. Numerical Statistical Computation
 - 3.2. Changes in Methodology
 - 3.3. Connections into Other Software
 - 3.4. Document Preparation and Display Systems
 - 3.5. Project Management Systems
 - 3.6. Human Interface Systems
 - 3.7. Networking and Internet Connection Systems
 - 3.8. Computational Biology
 - 3.9. Bioconductor
4. Statistical Computing in the Larger Context of Scientific Computing
 - 4.1. Computing Requirements for Scientific Projects
 - 4.2. Interdependence between Statistical Computing and Other Scientific Computing Tasks
5. Limitations of Coverage

- 5.1. Chapters Included Under This Theme
- 5.2. Numerical Statistical Computation
- 5.3. The Design of Data Collection
- 6. Directions for Future Development
 - 6.1. Progress to Date
 - 6.2. Incremental Development
 - 6.3. Areas Where Improvements Can Be Expected
- 7. Chapters Included Under This Theme

Statistical Graphics**16**

Michael Andrew Martin, *School of Finance and Applied Statistics, Australian National University, Australia*

Alan Hepburn Welsh, *Mathematical Sciences Institute, Australian National University, Australia*

- 1. Introduction
- 2. Graphs for Models Involving Two or More Variables
 - 2.1. Two-dimensional Graphics
 - 2.2. Plots based on Residuals
- 3. Graphs for Models Involving Several Covariates
 - 3.1. Dynamic Displays
 - 3.2. Outliers and Influential Points
 - 3.3. Graphics for Model Building
- 4. Graphs for Modeling Data Developing in Time or Space
 - 4.1. Dependence
- 5. Graphs for Modeling Survival Data
- 6. Graphs for Multivariate Data
 - 6.1. Principal Components Analysis
 - 6.2. Ordination Methods
 - 6.3. Cluster Analysis

Computer-Intensive Statistical Methods**55**

Brian D. Ripley, *Department of Statistics, University of Oxford, UK*

- 1. Introduction
- 2. Resampling and Monte Carlo methods
 - 2.1. The Bootstrap
 - 2.2. Monte Carlo Methods
- 3. Numerical Optimization and Integration
- 4. Density Estimation and Smoothing
 - 4.1. Scatterplot Smoothers
- 5. Relaxing Least-squares and Linearity
 - 5.1. Non-linearity
 - 5.2. Neural Networks
 - 5.3. Support Vector Machines
 - 5.4. Classification and regression trees
 - 5.5. Selecting and combining models

Statistical Computing**70**

John Hilary Maindonald, *Centre for Bioinformatics Science, Australian National University, Australia*

- 1. Introduction
 - 1.1. Content and Style
 - 1.2. Computing as a Stimulus to Innovation in Statistical Methodology
 - 1.3. Improvements to the Statistical Computing Environment
 - 1.4. Graphical User Interfaces

- 1.5. Efficiency Considerations
- 1.6. Parallel Processing
- 1.7. Unrealized Promises
2. Advances in Routines Used for Statistical Computation
 - 2.1. Numerical versus Non-numerical Routines
 - 2.2. The Structuring of Numerical Routines
 - 2.3. Non-numerical Routines
 - 2.4. Numerical Statistical Computing
 - 2.5. Calculations that Challenge Current Programs
3. Languages and Systems for Statistical Computing
 - 3.1. Communication between Human and Machine
 - 3.2. Different Modes of Communication for Different Users
 - 3.3. Systems for professional use
 - 3.4. Systems that are aimed at novices
4. Key Ideas for Statistical Systems
 - 4.1. Automation
 - 4.2. Connectivity – Interfaces between Systems
 - 4.3. Unifying and Enabling Ideas
 - 4.3.1. Different Types of Unifying and Enabling Ideas
 - 4.3.2. Do as the Object Requires
 - 4.3.3. Unifying Theoretical and Computational Ideas
 - 4.3.4. Desirable Unifications
 - 4.3.5. Computing on Language Objects
 - 4.3.6. Computable Documents
5. Desiderata for Statistical Systems
 - 5.1. General Requirements
 - 5.2. Results that Can be Trusted
 - 5.3. Analysis and Interpretation faults
 - 5.4. Faults in Software
 - 5.5. Faulty Tolerance Settings
 - 5.6. Wrestling with New Questions – the Analysis of Microarray Data
6. Large Data Bases - Data Mining
 - 6.1. What is Data Mining?
 - 6.2. Data Must Support the Intended Use
7. Connectivity
 - 7.1. Connections between Different Computing Tasks
 - 7.2. Text Formatting and Document Preparation Systems
 - 7.3. Internet Connectivity
8. The Future of Statistical Computing

Spatial Statistical Modeling in Biology

97

Christopher K. Wikle, *Department of Statistics, University of Missouri-Columbia, USA*

J. Andrew Royle, *U.S. Fish and Wildlife Service, Laurel, MD, USA*

1. Introduction
2. Gaussian Random Process Models
 - 2.1. Linear Mixed Model Framework
 - 2.2. Covariance models
 - 2.3. Estimation and Prediction
 - 2.3.1. Bayesian Estimation
 - 2.4. Markov Random Field Spatial Models
 - 2.4.1. Gaussian Markov Random Field Model
3. Non-Gaussian Random Process Models
 - 3.1. Generalized Mixed Model Framework
 - 3.2. Spatial GLMM Estimation and Prediction
 - 3.2.1. Spatial GLMM Example: Mapping Bird Counts
4. Multivariate Spatial Models

- 4.1. Cokriging
- 4.2. Hierarchical Models
- 5. Spatiotemporal Models
- 6. Computation
 - 6.1. High-Level or Low-Level Language
 - 6.2. Bayesian Computation
 - 6.3. Geographic Information Systems
 - 6.4. Technology
- 7. Future Directions
 - 7.1. Nonstationary Spatial Processes
 - 7.2. Multivariate Non-Gaussian Formulations

Biostatistical Methods and Research Designs

120

Xihong Lin, *Department of Biostatistics, University of Michigan, Ann Arbor, MI, USA*

- 1. Introduction
- 2. Biostatistical Research Strategies
 - 2.1. Understanding Scientific Disciplines
 - 2.2. Study Design and Data Collection
 - 2.3. Statistical Data Analysis
 - 2.4. Dissemination of Results
- 3. Study Designs
 - 3.1. Observational Studies
 - 3.1.1. Cross-Sectional Studies
 - 3.1.2. Cohort/Follow-up Studies
 - 3.1.3. Case-control Studies
 - 3.2. Randomized Studies
- 4. Statistical Models and Methods
 - 4.1. Linear Models and Generalized Linear Models
 - 4.2. Statistical Models for Survival Data
 - 4.3. Statistical Models for Longitudinal Data
 - 4.4. Other Statistical Models
- 5. Statistical Inference
 - 5.1. Estimation
 - 5.2. Hypothesis Testing

Epidemiology Methods

135

Trivellore E. Raghunathan, *Department of Biostatistics and Research Professor, Institute for Social Research, University of Michigan, Ann Arbor, USA*

- 1. Introduction
- 2. Types of Investigations
- 3. Measures of Association
- 4. Common Designs
 - 4.1. Cohort Design
 - 4.2. Case-Control Design
 - 4.3. Other Designs
- 5. Discussion

Communicable Diseases and Data Analysis

148

M. Elizabeth Halloran, *Department of Biostatistics, Rollins School of Public Health, Emory University, USA*

- 1. Introduction
- 2. Transmission probability

- 2.1. The binomial model of transmission
- 2.2. Contacts with persons of unknown infection status
- 2.3. The secondary attack rate
- 2.4. Transmission probability ratio
- 2.5. Augmented study designs
- 2.6. Validation sets
3. Basic Reproductive Number
 - 3.1. Characteristics of R_0
 - 3.2. Estimation of R_0
4. The dependent happening relation
5. Population-level effects of intervention
6. Challenges for the future

Nutritional Epidemiology

162

Ross L. Prentice, *Division of Public Health Sciences, Fred Hutchinson Cancer Research Center, Seattle, WA, USA*

1. Introduction
2. Research Designs and Methods
 - 2.1. Hypothesis Development
 - 2.2. Hypothesis Testing
 - 2.2.1. Analytic Epidemiology Studies
 - 2.2.2. Dietary Intervention and Nutritional Supplementation Trials
3. Example of Dietary Fat and Post-Menopausal Breast Cancer
 - 3.1. Hypothesis Generation
 - 3.2. Association Studies
 - 3.3. Ongoing Intervention Trials
4. Future Directions, Research Needs and Opportunities
 - 4.1. Hypothesis Development
 - 4.2. Hypothesis Testing
5. Concluding Remarks

Statistical Methods in Laboratory and Basic Science Research

177

Michael A. Newton, *University of Wisconsin, Madison, WI, USA*

1. Introduction
2. Theory: Universal Distributions
3. The Role of Statistics
 - 3.1. Exceptional Cases
 - 3.2. Endemic Methods
4. Statistical Strategies
 - 4.1. Descriptive Statistics
 - 4.2. Randomization
 - 4.3. Modeling
5. Case Studies
 - 5.1. Microbial Biodiversity and Conditional Inference
 - 5.2. Comparative Genomic Hybridization and Mixture Modeling
 - 5.3. Mouse Mutagenesis, Randomization Testing and Modeling
 - 5.4. Gene Expression Data Analysis: Hierarchical Modeling
6. Closing Remarks

Statistical Methods for Toxicology

194

Paige L. Williams, *Associate Professor of Biostatistics, Harvard School of Public Health, USA*

1. Introduction

2. Applications of Biostatistics to Toxicology
 - 2.1. Carcinogenicity Studies
 - 2.2. Developmental Toxicity Studies
 - 2.3. Reproductive Toxicity Studies
3. General Dose-Response Modeling
 - 3.1. Models for Quantal Responses
 - 3.2. Models for Continuous and Ordinal Responses
 - 3.3. Adjustment for Litter Effects
 - 3.4. Biologically Based Models for Carcinogenesis
4. Quantitative Risk Assessment
 - 4.1. Cancer Risk Assessment
 - 4.2. Non-Cancer Risk Assessment
5. Concluding Remarks

Selected Topics in Biometry

224

Jeffrey Thomas Wood, *The Australian National University, Canberra, Australia*

1. Introduction
2. Inference
 - 2.1. Hypothesis testing
 - 2.2. Confidence Intervals
 - 2.3. Model Selection
3. Design and Analysis of Experiments
4. Spatial Analysis
 - 4.1. Point Patterns - Complete Enumeration
 - 4.2. Point Patterns - Sparse Sampling
 - 4.3. Random Fields
5. Multivariate Methods
 - 5.1. Inference from Multivariate Data
 - 5.2. Classification
 - 5.3. Ordination
6. Variation over Time
7. Simulation
8. Statistical Genetics
 - 8.1. Qualitative Variation
 - 8.2. Quantitative Variation
9. Bioinformatics

Statistical Methodology in Agriculture and Horticulture

245

Andrew Mead, *Warwick HRI, University of Warwick, U.K*

1. Introduction
2. Current Methodology
 - 2.1. Experimental Design
 - 2.2. Analysis of Variance
 - 2.3. Regression Analysis
 - 2.3.1. Linear Regression
 - 2.3.2. Non-linear Regression
 - 2.4. Generalized Linear Models (GLMs)
 - 2.5. Residual or Restricted Maximum Likelihood (REML)
3. Future Developments
 - 3.1. Analysis of Spatial Data
 - 3.2. Precision Agriculture
 - 3.3. On-farm Experimentation

Statistical Methodology in Forestry

265

Timothy G. Gregoire, *Yale University, New Haven, CT, USA*

1. Introduction
2. Forest Inventory
3. Modeling Individual Tree Characteristics
 - 3.1. Tree Height Models
 - 3.2. Bole Taper Models
 - 3.3. Bole Volume and Biomass Models
 - 3.4. Models for Aboveground Biomass
 - 3.5. Modeling Crowns and Roots
4. Quantitative Characteristics of Forest Stands
 - 4.1. Stand Density
 - 4.2. Site Quality
 - 4.3. Growth and Yield Models
5. Statistically Designed Experiments in Forestry
 - 5.1. Greenhouse Experiments
 - 5.2. *In Situ* Experiments
 - 5.3. Spacing Trials

Statistical Ecology and Environmental Statistics

282

Ganapati P. Patil, *Department of Statistics, Center for Statistical Ecology and Environmental Statistics, The Pennsylvania State University, USA*

1. Introduction
2. Simple Stories but Challenging Concerns
 - 2.1. Introduction
 - 2.2. Life and Death with Averages and Variability
 - 2.3. Innovative Statistical Mind Sets
 - 2.4. Comprehensive vs. Comprehensible
 - 2.5. Space Age/Stone Age
 - 2.6. Cycle of No Information, New Information, and Non Information
 - 2.7. Mechanization/Computerization
 - 2.8. Normality, Lognormality and Beyond Lognormality
 - 2.9. Triad
 - 2.10. Follow-up
3. Ecological Sampling and Statistical Inference
 - 3.1. Encounter Sampling
 - 3.2. Adaptive Sampling
 - 3.3. Distance Sampling
 - 3.4. Capture-Recapture Sampling
4. Biodiversity Measurement and Comparison
 - 4.1. Biodiversity with Presence/Absence Data
 - 4.2. Biodiversity with Relative Abundance Data
 - 4.2.1. Am I a Specialist or a Generalist?
 - 4.2.2. Resource Apportionment
 - 4.2.3. Diversity as Average Species Rarity
 - 4.3. Diversity Profiles
5. Environmental Data and Cost-Effective Acquisition
 - 5.1. Observational Economy
 - 5.2. Design and Analysis with Composite Samples
 - 5.3. Ranked Set Samples
 - 5.4. Sampling Heterogeneous Media
 - 5.5. Combining Environmental Information
6. Landscape Ecology and Multi-Scale Assessment
 - 6.1. Hierarchical Markov Transition Matrix Models
 - 6.1.1. Spatial Dependence, Auto-Association, and Adjacency Matrix

- 6.1.2. Hierarchical Classified Map Simulation Model
- 6.1.3. Fragmentation Profiles
- 7. Echelon Analysis for Multispectral Environmental Change Detection
 - 7.1. Introduction and Background
 - 7.2. Echelons of Spatial Variation
 - 7.3. Echelon Characteristics
 - 7.4. Echelon Trees
 - 7.5. Echelon Profiles
 - 7.6. Echelon Research
 - 7.7. Environmental Applications
- 8. Statistics as an Instrument to Deal with Environmental and Ecological Crisis
 - 8.1. Increasing Use of Statistical Language in the Regulation of Environment and Natural Resources
 - 8.2. Conflict Resolution and Sustainable Development
 - 8.2.1. How Many of Them are Out There
 - 8.2.2. Long-Term Ecological Research
 - 8.2.3. Design, Analysis, and Nature of Our Observations
 - 8.2.4. Information Age and Sustainable Development
 - 8.3. Synthesis and Analysis with Integrated Satellite Data, Site Data, and Survey Data
- 9. Future Areas of Concern and Challenge
 - 9.1. Environmental Monitoring and Assessment
 - 9.2. Environmental Sampling and Observational Economy
 - 9.3. Geo-Spatial Statistics and Spatio-Temporal Statistics
 - 9.4. Ecological Assessment and Multi-Scale Analysis
 - 9.5. Environmental Data Synthesis and Statistical Meta-Analysis
 - 9.6. Statistics in Environmental Toxicology and Epidemiology
 - 9.7. Environmental Risk Assessment and Reduction
 - 9.8. Computational Ecometrics and Environmetrics
- 10. Looking Ahead

Population Genetics**317**

Hamish G. Spencer, *Associate Professor, Department of Zoology, University of Otago, Dunedin, New Zealand*

- 1. Introduction
- 2. Basic Principles
 - 2.1. Genetic Variation
 - 2.2. Hardy Weinberg Principle
 - 2.3. Non-random Mating
 - 2.4. Mutation
 - 2.5. Migration and Population Structure
 - 2.6. Genetic Drift
 - 2.7. Selection
- 3. Explanations for Genetic Variation
 - 3.1. Mutation-Selection Balance
 - 3.2. Balancing Selection
 - 3.3. Mutation-Drift Balance: The Neutral Theory
 - 3.4. Mutation, Drift and Selection: The Nearly-neutral Theory

Statistical Genetics**339**

Ken G. Dodds, *AgResearch, Invermay Agricultural Centre, Mosgiel, New Zealand*

- 1. Introduction
- 2. Basic Principles
 - 2.1. Allele and Genotype Frequencies
 - 2.2. Hypothesis Tests
 - 2.2.1. Hardy-Weinberg Disequilibrium

- 2.2.2. Linkage Equilibrium
- 2.3. Segregation
- 3. Relatedness
 - 3.1. Inbreeding
 - 3.2. Kinship
 - 3.3. Estimating Relatedness
 - 3.4. Testing Relationships
 - 3.4.1. Exclusion
 - 3.4.2. Hypothesis Testing
- 4. Plant and Animal Breeding
 - 4.1. Infinitesimal Model
 - 4.2. Genetic Parameters
 - 4.3. Estimating Genetic Parameters
 - 4.3.1. Heritability
 - 4.3.2. Repeatability
 - 4.3.3. Maternal Effects and Dominance
 - 4.4. Selection
- 5. Locus Mapping
 - 5.1. Two-Point Linkage
 - 5.2. Multi-Point Linkage
 - 5.2.1. Ordering Loci
 - 5.2.2. Genetic Maps
 - 5.3. Physical Mapping
- 6. Quantitative Trait Locus Mapping
 - 6.1. Segregation Analysis
 - 6.2. Single Marker Analysis
 - 6.3. Interval Mapping
 - 6.4. Multi-Marker Methods
 - 6.5. Allele Sharing Methods
 - 6.6. Type I and II Errors
 - 6.6.1. Significance Thresholds
 - 6.6.2. Confidence Intervals for Location
 - 6.6.3. Power
 - 6.6.4. Designs to Increase Power
 - 6.7. Fine Mapping

Bioinformatics: Past, Present and Future

370

 Susan R. Wilson, *Mathematical Sciences Institute, Australian National University, Australia*

- 1. Introduction
- 2. Biological Sequence Analysis
 - 2.1. Background
 - 2.2. Scoring Systems
 - 2.3. Sequence Alignment
 - 2.4. Assessment of Significance
 - 2.4.1. Overview of Basic Theory
 - 2.4.2. Complications and Developments
- 3. Applications of Hidden Markov Models in Bioinformatics
- 4. Evolutionary Models and Phylogenetic Reconstruction
- 5. Gene Expression Analysis
 - 5.1. Background
 - 5.2. Issues Concerning Outcome Measures
 - 5.3. Experimental Design
