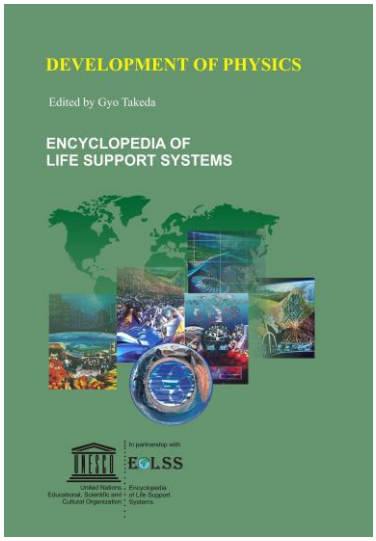
CONTENTS

DEVELOPMENT OF PHYSICS



Development of Physics Volume 1
e-ISBN: 978-1-84826-201-0
ISBN : 978-1-84826-651-3
No. of Pages: 608

CONTENTS

An Overview of the Development of Physics **1**
Gyo Takeda, *The University of Tokyo and Tohoku University, Sendai, Japan*

1. Introduction
2. Ancient Roots
3. Classical Physics
4. Modern Physics
5. Conclusion
   5.1. The Nobel Prize in Physics 1901–2001

Development of Fundamentals in Physics **27**
Gyo Takeda, *The University of Tokyo and Tohoku University, Sendai, Japan*

1. Introduction
2. Newtonian Mechanics
   2.1. Position, velocity and acceleration
   2.2. Newton's equation of motion
   2.3. Energy and work
   2.4. Hamilton formalism
   2.5. Lagrange formalism and the principle of least action
   2.6. Rotational motion
   2.7. Kepler's laws of planetary motion
   2.8. Units of physical quantities
3. Thermodynamics and Heat Transfer
   3.1. Temperature and pressure
   3.2. Heat and Heat Transfer
   3.3. The first law of thermodynamics
   3.4. Thermal properties of gases
   3.5. Thermodyanmics
   3.6. The second law of thermodynamics
   3.7. The kinetic theory of gases
4. Principles of Optics and Acoustics
   4.1. Principles of optics
   4.2. Principles of acoustics
   4.3. Propagation of sound
   4.4. Group velocity, phase velocity, and the Doppler effect
5. Electricity and Magnetism
   5.1. Electricity
   5.2. Magnetism
   5.3. Electrostatics and magnetostatics
   5.4. Relation between electricity and magnetism
   5.5. Unification of electricity and magnetism
   5.6. Vector fields and vector calculus
   5.7. Energy of electromagnetic fields
   5.8. Unification of the electromagnetism and the optics
   5.9. Electromagnetic potentials
   5.10. Systems of units

Physical Systems and Laws **145**
Gyo Takeda, *The University of Tokyo and Tohoku University, Sendai, Japan*

Introduction
1. Symmetry Principles and Conservation Laws

1.1. Geometrical Symmetry of Shapes or Patterns
1.2. Geometrical Principles of Symmetry or Invariance and Physical Laws
1.3. Conservation Laws and Invariance Principles
1.4. Charge Conservation
1.5. Discrete Symmetries of Charged Systems
1.6. Spontaneous Broken Symmetry
2. Special and General Relativity
2.1. Special relativity
2.2. Lorentz Transformations and Relativistic Four-vectors
2.3. Relativistic Dynamics
2.4. General Relativity
3. Statistical Physics
3.1. Isolated Systems
3.2. Closed Systems
3.3. Open Systems
3.4. Equilibrium between Phases
3.5. Partition Functions
3.6. Fluctuations
3.7. Open Systems Away from Equilibrium
4. Complex Systems and Non-linear Dynamics
4.1. Attractors
4.2. Bifurcations
4.3. Entrainments
4.4. Fractals
4.5. Chaos

Particles and Fields **248**
Gyo Takeda, *The University of Tokyo and Tohoku University, Sendai, Japan*

Introduction
1. Elementary and Fundamental Particles
1.1. Elementary Particles before 1970
1.2. Detections of Particles
1.3. Elementary Particles after 1970
2. Types of Interactions
2.1. Violation of Space-time Inversion Symmetries
3. Atoms, Molecules and Nuclei
3.1. Molecules
3.2. Nuclei
3.3. Radioactive Nuclei
3.4. Nuclear Reactions
3.5. Fission and Fusion
4. Electromagnetic Waves and Fields

Quantum Systems **349**
Gyo Takeda, *The University of Tokyo and Tohoku University, Sendai, Japan*

Introduction
1. Quantum Mechanical Laws
2. Stationary States of Quantum Systems
2.1. Stationary states of a freely moving particle
2.2. Stationary states of a particle in an infinitely high square potential
2.3. Stationary states of a particle in a harmonic oscillator potential in one-dimensional space
2.4. Stationary states of a particle in a harmonic oscillator potential in three-dimensional space
2.5. Stationary states of a charged particle in a coulomb potential
2.6. Barrier problems

2.7. Nuclear alpha decays
3. Atoms, Molecules and Solids
3.1. Atoms
3.2. Molecules
3.3. Solids
3.4. Phonons
3.5. Superconductivity and superfluidity
3.6. Superfluidity
4. Interaction of Radiation with Matter
4.1. Gauge Invariance and the Minimal Coupling of the Electromagnetic Field with Charged Particles

Order and Disorder in Nature **456**
Gyo Takeda, *The University of Tokyo and Tohoku University, Sendai, Japan*

1. Introduction
2. Structure of Solids and Liquids
2.1. Crystalline Structure of Solids
2.2. Liquids
3. Phase Transitions and Spontaneous Broken Symmetry
3.1. Spontaneous Symmetry Breaking
3.2. Order Parameter
4. Non-equilibrium Processes

Physics and Development **521**
Leon Max Lederman, *Fermi National Accelerator Laboratory, USA*

1. Introduction
2. Milestones of Physics
2.1. Major Revolutions
2.2. Additional Milestones in Physics
3. Overview of Applications
3.1. Introduction
3.2. Cultural Matters
4. Direct Effects of Basic Research
4.1. Genetic Engineering
4.2. Direct Effect: Energy
4.3. The Essential Connections
5. Indirect Effects ("Spin-off")
5.1. Introduction
5.2. Particle Accelerators
5.3. Detection Instruments and Techniques
5.4. Superconductivity and Cryogenics
5.5. Theoretical Physics Applications
6. Basic Knowledge at the End of the Century: The Legacy
6.1. Theory and Experiment
6.2. The Legacy of Twentieth-century Physics
6.3. A Final Theory?
7. The Education Crisis

Index **551**

About EOLSS **559**
