ELECTROCHEMISTRY

Electrochemistry - Volume 1

No. of Pages: 450

ISBN: 978-1-84826-219-5 (eBook)

ISBN: 978-1-84826-669-8 (Print Volume)

For more information on e-book(s) and Print Volume(s) order, please [click here](#)

CONTENTS

Electrochemistry **1**

Victor Climent, *Instituto de Electroquímica, University of Alicante, Spain*

1. Introduction
 - 1.1. A Historical Perspective
 - 1.2. An Overview of Applications
2. Thermodynamic Treatment of Charged Phases
 - 2.1. Galvanic Cells: Nernst Equation
 - 2.2. Electrode Potential, Reference Electrode
3. The Electrochemical Double Layer
4. Outside Equilibrium.
 - 4.1. The Three Electrode Configuration
 - 4.2. Overvoltages
 - 4.3. Butler Volmer Equation
 - 4.4. Mass Transport
 - 4.5. Rotating Disk Electrode
 - 4.6. Cyclic Voltammetry
 - 4.7. Electrocatalysis
5. Applications
 - 5.1. Electroanalysis
 - 5.2. Batteries
 - 5.3. Electrosynthesis
6. Conclusions

Electron Transfer and Single Molecular Events **52**

W. Schmickler, *Department of Theoretical Chemistry, University of Ulm, D-89069 Ulm, Germany*

1. Introduction
2. The Theories of Marcus and Hush
3. Gerischer's Formulation
4. Energy of Reorganization
5. Quantum Theory
6. Beyond First Order Perturbation
7. From Non-adiabatic to Adiabatic Reactions
8. Electron Transfer through Single Molecules
9. Conclusions

Sensors **72**

J. M. Pingarrón, *Department of Analytical Chemistry, Faculty of Chemistry, University Complutense of Madrid, Spain*

P. Yanez-Sedeno, *Department of Analytical Chemistry, Faculty of Chemistry, University Complutense of Madrid, Spain*

1. Introduction
2. Potentiometric sensors
 - 2.1. Glass Electrodes
 - 2.2. Crystalline-based Electrodes
 - 2.3. Liquid Membrane Electrodes
 - 2.4. Solid-state Sensors
 - 2.5. Gas Sensors
 - 2.6. Miniaturized Devices
3. Amperometric and voltammetric sensors
4. Electrochemical biosensors

- 4.1. Catalytic Biosensors
- 4.2. Affinity Biosensors
 - 4.2.1. Immunosensors
 - 4.2.2. DNA Biosensors
5. Conclusions

Electrochemical Energy Conversion and Storage - Batteries, Fuel Cells and Electrochemical Capacitors

106

P. A. Christensen, *The School of Chemical Engineering and Advanced Materials, Newcastle University, Newcastle upon Tyne, UK*

1. Introduction
2. Electrochemical Capacitors
 - 2.1. Capacitance and Capacitors
 - 2.2. The Electric Double Layer
 - 2.3. The Evolution of Supercapacitors
 - 2.4. The Characteristics of Symmetric Supercapacitors
3. Batteries
 - 3.1. The Characteristics of Batteries
 - 3.2. Primary Batteries
 - 3.2.1. The Leclanché Cell
 - 3.2.2. The Alkaline Cell
 - 3.2.3. Primary Lithium Batteries
 - 3.3. Secondary Batteries
 - 3.3.1. The Lead Acid Battery
 - 3.3.2. NiCd and NiMH Batteries
 - 3.3.3. Li ion Batteries
 - 3.3.4. Sulfur Cathode Batteries
 - 3.3.5. Charging of Secondary Batteries
 - 3.3.6. Charge vs Discharge of Secondary Batteries
 - 3.4. The Discharge Characteristic of Batteries
4. Hybrid Supercapacitors
5. Fuel Cells
 - 5.1. The Fuel and Oxidant
 - 5.2. The Effect of Temperature and Pressure
 - 5.3. Connecting Fuel Cells Together: the Bipolar Plate
 - 5.4. The 3-Phase Region
 - 5.5. The Polarization Curve
 - 5.6. The Efficiency of Fuel Cells
 - 5.7. Low Temperature Fuel Cells
 - 5.7.1. The Alkaline Fuel Cell (AFC)
 - 5.7.2. The Proton Exchange Membrane Fuel Cell (PEMFC)
 - 5.7.3. Alkaline Anion Exchange Membrane Fuel Cells AAEMFC's
 - 5.8. Medium Temperature Fuel Cells
 - 5.8.1. The Phosphoric Acid Fuel Cell (PAFC)
 - 5.8.2. The Molten Carbonate Fuel Cell (MCFC)
 - 5.9. High Temperature Fuel Cells: the Solid Oxide Fuel Cell (SOFC)
 - 5.9.1. The Electrolyte
 - 5.9.2. The Anode
 - 5.9.3. The Cathode
 - 5.9.4. The Interconnects
 - 5.9.5. Internal Reforming in SOFC's
 - 5.9.6. Sealing
 - 5.10. The Direct Methanol Fuel Cell (DMFC)
 - 5.10.1. The Anode
 - 5.10.2. The Polymer Electrolyte Membrane and Cathode
 - 5.10.3. The DMFC Present and Future

6. "Hybrid" Batteries/Fuel Cells
 - 6.1. The Metal/Air Battery
 - 6.2. Redox Batteries/Regenerative Fuel Cells
7. Microbial Fuel Cells (MFC's)
8. Conclusion

Bioelectrochemistry**194**Rolando Guidelli, *Department of Chemistry, Florence University, Italy*

1. Introduction
2. Electrochemistry of Water Soluble Redox Proteins
 - 2.1. Diffusion Controlled Electrochemistry of Water Soluble Redox Proteins
 - 2.2. Electrochemistry of Water Soluble Redox Proteins Immobilized on the Electrode Surface
 - 2.3. Mediated Electron Transfer between Redox Proteins and Electrode
3. Experimental Models of Biomembranes
 - 3.1. The Electric Potential Profile in Biomembranes and Lipid Bilayers
 - 3.1.1. Measurements of Transmembrane, Surface and Dipole Potentials
 - 3.2. Electroporabilization of Lipid Bilayers
 - 3.3. Biomembrane Models Noncovalently Supported by Metals
 - 3.3.1. Biomimetic Membranes Noncovalently Supported by Mercury
 - 3.3.2. Biomimetic Membranes Noncovalently Supported by Other Metals
 - 3.4. Biomembrane Models Covalently Supported by Metals
 - 3.4.1. Solid Supported Membranes (SSMs)
 - 3.4.2. Tethered Bilayer Lipid Membranes (Tblms)
4. Conclusions

Corrosion and Surface Treatment**240**D. Landolt, *Institute of Materials, Swiss Federal Institute of Technology Lausanne, Switzerland*

1. Scope and Economic Importance of Metal Corrosion
2. Why Metals Corrode
 - 2.1. Corrosion Reactions
 - 2.2. Nernst Equation
 - 2.3. Pourbaix Diagrams
3. Rate of Corrosion Reactions
 - 3.1. Units for Expressing Corrosion Rate
 - 3.2. Corrosion Potential and Corrosion Current Density
 - 3.3. Rate Determining Steps
4. Oxide films
 - 4.1. Rusting of Steel
 - 4.2. Oxide Films on Passive Metals
 - 4.3. Anodizing
 - 4.4. Oxide Films in High Temperature Corrosion
5. Corrosion Cells Resulting in Non-Uniform Corrosion
 - 5.1. Galvanic Corrosion
 - 5.2. Crevice Corrosion
 - 5.3. Pitting Corrosion
 - 5.4. Tribocorrosion
6. Environment Induced Cracking
 - 6.1. Stress Corrosion Cracking
 - 6.2. Hydrogen Embrittlement
 - 6.3. Corrosion Fatigue
7. Corrosion Protection and Surface Treatment
 - 7.1. General Considerations
 - 7.2. Corrosion Testing
 - 7.3. Corrosion Protection by Coatings

- 7.4. Other Approaches to Corrosion Control
8. Outlook

Semiconductor Electrochemistry

272

Laurence M Peter, Department of Chemistry, University of Bath, Bath BA2 7AY, United Kingdom

1. Introduction
2. Overview of Basic Semiconductor Physics
 - 2.1. Electrons and Holes in Semiconductors
 - 2.2. Metal Contacts and p-n Junctions
3. Semiconductor Electrolyte Junctions
 - 3.1. Redox Electrolyte Junction
 - 3.2. Ideally Polarizable Junctions: The Space Charge Region
 - 3.3. Photo-Effects and Electrode Stability
 - 3.4. (Photo)electrochemical Etching of Semiconductors
 - 3.5. Photocurrent-voltage Characteristics
 - 3.6. Photocurrent Multiplication
 - 3.8. Photosensitization
4. Photoelectrochemical Cells
 - 4.1. Regenerative Photoelectrochemical Solar Cells
 - 4.2. Photosynthetic Cells
5. Nanostructured Semiconductor Interfaces
 - 5.1. Porous single crystal semiconductors
 - 5.2. Regenerative Solar Cells Based on Sensitized Nanostructured Semiconductors
 - 5.3. Water Splitting at Nanostructured Semiconductor Electrodes
6. Experimental Techniques in Semiconductor Electrochemistry
 - 6.1. Capacitance and Impedance Measurements
 - 6.2. Photocurrent Spectroscopy
 - 6.3. Transient and Periodic Illumination
7. Conclusions

Conducting Polymers

300

Marco F. Suarez-Herrera, Departamento de Química, Facultad de Ciencias, Universidad Nacional de Colombia, Bogotá, Colombia

1. Introduction
2. Nature of the charges appearing on the polymer chains upon doping
3. Mechanism of charge transport in CPs
4. Synthesis of CPs
 - 4.1. Electrosynthesis of CPs
 - 4.2. Synthesis and Electrochemical Properties of CPs in Room Temperature Ionic Liquids
 - 4.3. Nucleation and Growth of Electrochemically Synthesized CPs
 - 4.4. Morphology and Structure of Electrochemically Synthesized CPs
5. Ion transport kinetics during redox processes of CPs
6. Functionalized monomers and Chemical Modification of Polymer Chains
7. Applications of CPs
 - 7.1. Electrocatalytic Activity of CPs
 - 7.2. Organic CPs as Semiconductors
 - 7.3. Electrochromic Devices
 - 7.4. Artificial Muscles and Actuators
 - 7.5. Sensors
 - 7.6. Batteries
 - 7.7. Solar Cells
 - 7.8. Electrochemical Capacitors
 - 7.9. Corrosion Inhibitors
 - 7.10. Drug Delivery

- 7.11. Electromagnetic Interference Shielding
- 7.12. Organic Electronic Memory
- 8. Conclusion

Electrochemical Approaches To Environmental Treatment And Recycling**340**P.M. Bersier, *Cagliostrostrasse 38, 4125 Riehen, Switzerland*C. Ponce de Leon, *Electrochemical Engineering Laboratory, School of Engineering Sciences, University of Southampton, SO17 1BJ, United Kingdom*F. C. Walsh, *Electrochemical Engineering Laboratory, School of Engineering Sciences, University of Southampton, SO17 1BJ, United Kingdom*

- 1. Introduction
- 2. Electrochemical Processes for Water Treatment and a Cleaner Environment
 - 2.1. Direct and Indirect Electrolysis
 - 2.2. Disposal of Organic Pollutants from Industrial Wastewaters
 - 2.2.1. Electrochemical Disposal and Destruction of Organics
 - 2.2.2. Electrochemical Cathodic Reduction
 - 2.2.3. Direct Electrochemical Oxidation
- 3. Electrochemically Generated Oxidizing Agents, such as Cl₂, OCl⁻, H₂O₂, O₃
 - 3.1. Mediated Destruction of Organics using Electrogenerated Oxidants
 - 3.2. Heterogeneous Oxidation at Anodic Oxides
 - 3.3. Electrochemical Decolorization
- 4. Disposal, Elimination, Recovery and Recycling of Inorganic Pollutants
 - 4.1. Elimination of Metals
 - 4.1.1. Ion-exchange
 - 4.1.2. Electrochemical Processes based on Cathodic Deposition
 - 4.1.3. Electrochemical Ion-exchange (EIX)
- 5. Membrane-based Electrochemical Processes
 - 5.1. Electrodialysis
 - 5.2. Salt Splitting
- 6. Soil Remediation by Electrochemical Methods
- 7. Gas Purification
 - 7.1. Removal of CO₂
 - 7.2. Removal of NO_x
 - 7.3. Removal of SO₂
- 8. Cleaner Electrical Energy and Storage from Electrochemical Power Sources
 - 8.1. Fuel Cells
 - 8.2. Batteries
 - 8.3. Supercapacitors
 - 8.4. Redox Flow Cells
- 9. Conclusions

Physical and Molecular Electrochemistry**382**Emmanuel Maisonhaute, *LISE – UPR 15 du CNRS, Université Pierre et Marie Curie - Paris 6, 4 place Jussieu, 75252 Paris Cedex 05, France*Jay Wadhawan, *Department of Chemistry, The University of Hull, Cottingham Road, Kingston upon Hull, HU6 7RX, United Kingdom.*

- 1. Introduction
- 2. Principle of Electrochemical Investigations
 - 2.1. Electron Transfer at the Interface
 - 2.2. Propagation into the Solution
- 3. Mechanisms
 - 3.1. Fast and Slow Electron Transfer
 - 3.2. Influence of Chemical Reactions
 - 3.2.1. Introduction

3.2.2. The E-C Mechanism	
3.2.3 Dimerization	
3.2.4 Concerted Mechanisms.	
3.2.5 Enzymatic Systems	
4. Advantages of Using Small Electrodes	
4.1 Physicochemical Advantages	
4.2. Localized Electrochemistry	
4.3. Towards Nanoelectrodes	
5. Conclusions
