

CONTENTS

MATERIAL SCIENCE AND ENGINEERING

Material Science and Engineering - Volume 1

No. of Pages: 346

ISBN: 978-1-84826-032-0 (eBook)

ISBN: 978-1-84826-482-3 (Print Volume)

Material Science and Engineering - Volume 2

No. of Pages: 494

ISBN: 978-1-84826-033-7 (eBook)

ISBN: 978-1-84826-483-0 (Print Volume)

Material Science and Engineering - Volume 3

No. of Pages: 354

ISBN: 978-1-84826-034-4 (eBook)

ISBN: 978-1-84826-484-7 (Print Volume)

CONTENTS

VOLUME I

Materials Science and Engineering **1**
 Rees D. Rawlings, *Imperial College of Science, Technology and Medicine, London, UK*

1. Introduction
2. Structure of Materials
3. Defects in Crystals
 - 3.1. Sub-atomic Defects
 - 3.2. Point Defects
 - 3.3. Line Defects: Dislocations
 - 3.4. Planar Defects
 - 3.5. Large (macro) Defects
4. Processing of Materials
 - 4.1. Continuous Casting
 - 4.2. Silicon for Electronic Devices
 - 4.3. Laser Direct Casting
5. Efficient Production and use of Materials
 - 5.1. Good Design
 - 5.2. Recycling
 - 5.3. Reuse
 - 5.4. Non-destructive Testing
6. Materials in Combination
 - 6.1. Composites
 - 6.2. Coatings
 - 6.3. Functionally Graded Materials
7. Some Active Areas of Materials Development
 - 7.1. Biomaterial
 - 7.2. Smart Materials
8. Concluding Remarks

Optimization of Materials Properties **52**
 Harvey M. Flower, *Imperial College, London, UK*

1. Introduction
2. Optimization through Solidification Processing
3. Optimization through Mechanical Processing
 - 3.1. Exploitation of Transformation Plasticity
4. Optimization through Heat Treatment
 - 4.1. Precipitation Hardening
5. Optimization by local Microstructural Modification
6. Final Comments

Bonding in Solids, Structural and Chemical Properties **69**
 Robin W. Grimes, *Imperial College, London, UK*

1. Introduction
2. Atomic Orbitals: their Origin and their Shapes
 - 2.1. The Four Quantum Numbers
 - 2.2. The Schrödinger Equation
 - 2.2.1. Solutions to the Schrödinger Equation: The Wave Function
 - 2.2.2. Hydrogen as a Central Force Problem
 - 2.2.3. The Angular Component

- 2.2.4. Parity
- 2.2.5. The Radial Component
- 2.2.6. Energy Level Values
- 2.3. Atoms with more than One Electron
- 3. Forming Bonds between like Atoms: Bonding and Anti-bonding Molecular Orbitals, Sigma and Pi-bonds
 - 3.1. The Born-Oppenheimer Approximation
 - 3.2. The Molecular Orbital Approximation
 - 3.3. Linear Combination of Atomic Orbitals
 - 3.3.1. s Bonding Orbitals
 - 3.3.2. s Anti-bonding Orbitals
 - 3.4. The Binding Curve for H_2^+
 - 3.5. Predicting the Stability of Other Simple Molecules
 - 3.6. The Fluorine Diatomic Molecule: Another Homonuclear Molecule
 - 3.6.1. π Bonds in F_2
- 4. Forming Bonds between Unlike Atoms: Polar Covalent and Ionic Bonds, Two Extremes of the Same Process
 - 4.1. HF, a Polar Covalent Molecule
 - 4.2. NaF, an Ionic Molecule
- 5. A Simple Model for an Ionic Solid: A Balance between Coulombic Attraction and Short-range Repulsion
 - 5.1. Effective Potentials for Ionic Molecules
 - 5.1.1. The Coulomb Term
 - 5.1.2. Short-range Contributions
 - 5.2. Extending the Model to Bulk NaF
 - 5.2.1. The Madelung Constant
 - 5.2.2. The Lattice Energy and the Born-Harber Cycle
 - 5.3. Calculating the Bulk Modulus
- 6. From Hybridization to Conjugation to Band Structures: Why Diamond and Graphite have such Different Properties
 - 6.1. Carbon
 - 6.1.1. The Diamond Structure
 - 6.1.2. Graphite
 - 6.2. Hybridization and Molecular Orbitals
 - 6.2.1. The $BeCl_2$ Molecule
 - 6.2.2. Methane: CH_4 and sp^3 Hybridization
 - 6.2.3. Bonding in Diamond
 - 6.2.4. Ethene: C_2H_4 and sp^2 Hybridization
 - 6.2.5. Conjugation and Butadiene
 - 6.2.6. Extending the Model to Graphite
- 7. More about Bands: Metals, Insulators and Semiconductors
 - 7.1. Forming Bands in Metals
 - 7.2. Energy Level Distribution from a Free Electron Model
 - 7.2.1. Schrödinger Equation for a Free Electron
 - 7.2.2. Boundary Condition
 - 7.2.3. Electron Gas Pressure
 - 7.2.4. Effect of a Periodic Lattice Potential on the Free Electron Density of States
 - 7.2.5. Effect of Temperature on Electron Distribution
 - 7.3. Forming Bands in Insulators
 - 7.4. Forming Bands in Semiconductors
 - 7.4.1. Intrinsic Conductivity
 - 7.4.2. Impurity Dominated or Extrinsic Conductivity
 - 7.5. Summary
- 8. Molecular Solids, van der Waals Solids and Hydrogen Bonding
 - 8.1. Forming Solids from Molecules
 - 8.2. Molecular Interactions
 - 8.2.1. Interactions between Dipoles
 - 8.2.2. Dipole-dipole Interactions: Orientation Interaction

- 8.2.3. Dipole-induced Dipole Interactions: Induction Interaction
- 8.2.4. Induced Dipole: Dispersion Interaction
- 8.2.5. Comparison of Interaction Terms
- 8.2.6. Hydrogen Bonding
- 8.2.7. Repulsive Forces
- 9. Conclusion: How to use the Knowledge
 - 9.1. General Comments
 - 9.2. The Influence of Defects
 - 9.3. Concluding Comments

Structure and Properties of Polymers

135

Pavel Kratochvíl, *Institute of Macromolecular Chemistry, Academy of Sciences of the Czech Republic, Prague, Czech Republic*

- 1. Macromolecules and Polymers
- 2. Synthesis of Polymers
- 3. Structure of Macromolecules
- 4. Structure of Polymers
- 5. Design of Polymers with Specific Properties
- 6. Mechanical Properties of Polymers
- 7. Rheology and Viscoelasticity of Polymers
- 8. Electric and Optical Properties of Polymers
- 9. Additives
- 10. Polymer Processing
- 11. Polymers and the Environment
- 12. Methods of Polymer Characterization
- 13. Specialty Polymers
- 14. Conclusion

Mechanical Properties of Polymers

157

Anil K. Bhowmick, *Indian Institute of Technology Kharagpur, India*

- 1. Introduction to Mechanical Properties: General Considerations
- 2. Deformation Behavior of Polymers
- 3. Statistical Molecular Theories
 - 3.1. Single Polymer Chain
 - 3.2. Polymer Network
- 4. Large Deformation Theory
- 5. Finite Element Idealization
- 6. Experimental Stress-Strain Plots
 - 6.1. Stress-Strain Curves of Polymers
 - 6.2. Stress-Strain Behavior of Elastomers
 - 6.3. Stress-Strain Curves of Various Plastics
 - 6.4. Stress-Strain Behavior of Block Copolymer
 - 6.5. Stress-Elongation versus Stress-Retracton Curves
 - 6.6. Stress-Strain Plots Under Various Deformations
- 7. Dynamic Mechanical Properties
 - 7.1. General Considerations
 - 7.2. Zones of Viscoelastic Behavior
 - 7.3. Stored Energy and Dissipated Energy
 - 7.4. Equation of Motion
 - 7.5. Temperature and Frequency Effects
 - 7.6. Interpretation of Dynamic Mechanical Spectra of Polymers
 - 7.6.1. Glassy Polymers
 - 7.6.2. Crystalline Polymers
 - 7.6.3. Elastomers

8. Ultimate Stress and Ultimate Strain of Polymers

Mechanical Properties of Crystalline Materials**221**Zhongguang Wang, *Institute of Metal Research, Chinese Academy of Sciences, Shenyang, China*

1. Introduction
2. Stress-strain Curves
3. Elastic Deformation
4. Anelastic Deformation
5. Viscous Deformation
6. Geometry and Crystallography of Plastic Deformation
 - 6.1. Resolved Shear Stress and Schmid Law
 - 6.2. The Stress-strain Curve of Ductile Single Crystals
 - 6.3. Geometry of Slip
 - 6.4. Twinning
7. Plastic Deformation of Polycrystals
8. Work-hardening, Recovery and Recrystallization
9. Fracture of Metals
 - 9.1. Ductile Fracture
 - 9.2. Brittle Fracture
 - 9.3. Fracture Toughness
10. Fatigue of Metals
 - 10.1. Fatigue Life Behavior
 - 10.2. Cyclic Deformation
 - 10.3. Crack Initiation
 - 10.4. Crack Propagation
11. Creep and Creep-rupture
 - 11.1. Primary Creep
 - 11.2. Secondary Creep
 - 11.3. Tertiary Creep and Creep Rupture
12. Mechanical Properties of Ceramic Materials
 - 12.1. Mechanisms of the Deformation of Ceramic Materials
 - 12.2. The Strength of Ceramic Materials
 - 12.3. Toughening of Ceramic Materials

Phase Equilibria and Microstructure**256**Philip Nash, *Professor, Mechanical, Materials and Aerospace Engineering Department, Illinois Institute of Technology, Chicago, IL, USA*

1. Phase Equilibria
 - 1.1. Introduction
 - 1.2. Gibbs Phase Rule
 - 1.2.1. Phase
 - 1.2.2. Components
 - 1.2.3. System
 - 1.2.4. Equilibrium Relationships
 - 1.2.5. Gibbs Phase Rule
2. Phase Diagrams
 - 2.1. Binary Phase Diagrams
 - 2.2. Ternary and Higher Order Phase Diagrams
 - 2.3. Metastable Phase Equilibrium Diagrams
 - 2.4. Thermodynamic Calculation of Phase Diagrams
3. Microstructure
 - 3.1. Analysis of Microstructure
 - 3.2. Non-equilibrium Microstructures
 - 3.3. Effect of Processing on Microstructure

- 3.4. Second-phase Strengthening
- 3.5. Grain Boundaries

Index **273**

About EOLSS **281**

VOLUME II

Structural and Functional Materials **1**

Helen V. Atkinson, *University of Sheffield, UK*

1. Structural Materials
 - 1.1. Properties
 - 1.2. Elastic Modulus
 - 1.3. Yield Strength, Ultimate Tensile Strength, Ductility, Hardness
 - 1.4. Plasticity: Dislocations
 - 1.5. Work-hardening, Recovery and Recrystallization
 - 1.6. Fracture Toughness
 - 1.7. Fatigue
 - 1.8. Creep
 - 1.9. Corrosion and Oxidation
 - 1.9.1. Oxidation
 - 1.9.2. Wet Corrosion
 - 1.10. Wear
 - 1.11. Summary of Structural Materials
2. Functional Materials
 - 2.1. Optical Materials
 - 2.1.1. Absorption by Isolated Atoms
 - 2.1.2. Band Theory
 - 2.1.3. Lasers
 - 2.1.4. Raman Scattering
 - 2.1.5. Fluorescence and Phosphorescence
 - 2.2. Electrical Properties
 - 2.2.1. Wide Range of Electrical Conductivities
 - 2.2.2. Fundamentals of Conduction
 - 2.2.3. Fermi Surface and Fermi Sphere
 - 2.2.4. Scattering Mechanisms
 - 2.2.5. Semiconductors
 - 2.2.6. Superconductors
 - 2.2.6.1. Applications of Superconductors
 - 2.2.6.2. High T_c Superconductors
 - 2.3. Dielectrics
 - 2.3.1. Piezoelectrics
 - 2.3.2. Ferroelectrics
 - 2.3.3. Optical Fibers
 - 2.3.4. The Photocopying Process
 - 2.3.5. Liquid Crystals
 - 2.4. Magnetic Properties
 - 2.4.1. Ferromagnetism, Paramagnetism, Diamagnetism
 - 2.4.2. Curie Temperature and Domains
 - 2.4.3. Origin of Magnetism at an Atomic Level
 - 2.4.4. Ferrimagnetism
 - 2.4.5. Origin of Domains
 - 2.4.6. Hard and Soft Magnets
 - 2.4.7. Origin of Hysteresis

- 2.5. Thermal Properties
- 2.6. Summary of Functional Materials

Magnetic Materials

49

I.R. Harris, *School of Metallurgy and Materials, University of Birmingham, Birmingham, UK*
 A.J. Williams, *School of Metallurgy and Materials, University of Birmingham, Birmingham, UK*

- 1. Introduction
- 2. The Origin of Magnetism
- 3. Magnetic Terminology and Units
- 4. Types of Magnetic Materials
 - 4.1. Diamagnetism
 - 4.2. Paramagnetism
 - 4.3. Ferromagnetism
 - 4.4. Antiferromagnetism
 - 4.5. Ferrimagnetism
- 5. Intrinsic Properties of Magnetic Materials
 - 5.1. Saturation Magnetization
 - 5.2. Magnetic Anisotropy
- 6. Magnetic Domains
- 7. Magnetic Hysteresis
 - 7.1. Magnetic Parameters
 - 7.2. Coercivity Mechanisms
- 8. Observation of Magnetic Domains
 - 8.1. The Bitter Method
 - 8.2. Magneto-optic Methods
- 9. Hard Magnetic Materials
 - 9.1. Alnicos
 - 9.2. Hard Ferrites
 - 9.3. SmCo-based Materials
 - 9.4. NdFeB-based Materials
- 10. Applications of Hard Magnetic Materials
- 11. Soft Magnetic Materials
 - 11.1. Iron-silicon Alloys
 - 11.2. Amorphous and Nano-crystalline Alloys
 - 11.3. Nickel-iron Alloys
 - 11.4. Soft Ferrites
- 12. Applications of Soft Magnetic Materials
 - 12.1. AC Applications
 - 12.2. DC Applications
- 13. Magnetic Recording
 - 13.1. Magnetic Tapes
 - 13.2. Magnetic Disks
 - 13.3. Writing and Reading Data
- 14. Other Magnetic Materials
 - 14.1. Magnetostriction
 - 14.2. Magnetoresistance

High Temperature Structural Materials

84

John D. Venables, *Consultant on Advanced Materials, USA*

- 1. Introduction
- 2. Review of Current High Temperature Structural Materials
 - 2.1. Ceramics and Ceramic Matrix Composites (CMCs)
 - 2.2. Nickel-base Superalloys
 - 2.3. Refractory Metals

- 2.4. Intermetallics
- 3. Applications
 - 3.1. Fuel Cells
 - 3.2. Gas Turbines for Electric Power
 - 3.3. Coal Gasification
 - 3.4. Space Shuttle
- 4. The Future

Fundamental Aspects of Corrosion of Metallic Materials

99

Philippe Marcus, *Laboratoire de Physico-Chimie des Surfaces, CNRS; Université Pierre et Marie Curie, Ecole Nationale Supérieure de Chimie, Paris, France*

Vincent Maurice, *Laboratoire de Physico-Chimie des Surfaces, CNRS; Université Pierre et Marie Curie, Ecole Nationale Supérieure de Chimie, Paris, France*

- 1. Introduction
- 2. Electrochemical Characteristics of the Corrosion of Metallic Materials
 - 2.1. Anodic Polarization Curves
 - 2.2. Cathodic Reaction
 - 2.3. Thermodynamic Aspects of Corrosion and Passivity
- 3. Anodic Dissolution in the Active State
 - 3.1. Mechanisms of Anodic Dissolution
 - 3.2. Structural Aspects
- 4. Passivity of Metallic Materials
 - 4.1. Chemical Composition and Thickness of Passive Films
 - 4.2. Potential Drops at Passivated Surfaces
 - 4.3. Electronic Properties of Passive Films
 - 4.4. Structure of Passive Films
 - 4.5. Growth Mechanisms
- 5. Passivity Breakdown
 - 5.1. Phenomenology of Pitting
 - 5.2. Stochastic Approach of Pitting
 - 5.3. Mechanisms of Pit Initiation
 - 5.4. Factors Stabilizing Pit Growth
- 6. Effects of Alloying Elements
 - 6.1. Anodic Dissolution of Alloys
 - 6.2. Chromium Oxide Enrichment in Passivated Fe-base (Stainless Steels) and Ni-base Alloys
 - 6.3. The Effects of Molybdenum
 - 6.4. The Effects of Nitrogen
 - 6.5. Passivity of Aluminum Alloys
 - 6.6. Alloying Elements as Passivity Promoters and Dissolution Moderators
- 7. Sulfur-induced Corrosion
- 8. Concluding Remarks

Benefits of Fiber and Particulate Reinforcement

133

Paul A. Smith, *School of Engineering, University of Surrey, Guildford, Surrey, GU2 7XH, UK*

Julie A. Yeomans, *School of Engineering, University of Surrey, Guildford, Surrey, GU2 7XH, UK*

- 1. Introduction
- 2. Types of Reinforcement
- 3. Mechanical Behavior of Composites
 - 3.1. Introduction
 - 3.2. Mechanical Behavior of Continuous Fiber Composites
 - 3.3. Mechanical Behavior of Short Fiber and Particulate Composites
 - 3.4. Aspects of Design with Composites
- 4. Processing of Composites
- 5. Reinforced Polymers

- 5.1. Introduction
- 5.2. Particulate and Short Fiber Systems
- 5.3. Long (Continuous) Fiber Systems
- 5.4. Processing
- 5.5. Applications
- 6. Reinforced Metals
 - 6.1. Introduction
 - 6.2. Particulate and Short Fiber Systems
 - 6.3. Long (Continuous) Fiber Systems
 - 6.4. Processing
 - 6.5. Applications
- 7. Reinforced Ceramics
 - 7.1. Introduction
 - 7.2. Processing of Ceramic Matrix Composites
 - 7.3. Particulate Ceramic Matrix Composites
 - 7.4. Continuous Fiber Ceramic Matrix Composites
- 8. Concluding Remarks

Materials Processing and Manufacturing Technologies

155

H. McShane, *Imperial College, London, UK*

- 1. Introduction
- 2. Processing via the Liquid State
 - 2.1. Metals
 - 2.1.1. Disposable Mold Casting
 - 2.1.2. Permanent Mold Casting
 - 2.2. Glasses
 - 2.2.1. Drawing
 - 2.2.2. Rolling
 - 2.2.3. Float Process
- 3. Powder Methods
 - 3.1. Metals
 - 3.1.1. Production of Metal/Alloy Powders
 - 3.1.2. Future Trends
 - 3.2. Ceramics
 - 3.2.1. Powder Production
 - 3.2.2. Sizing
 - 3.2.3. Mixing
 - 3.2.4. Shaping/Forming
 - 3.2.5. Drying
 - 3.2.6. Firing (Sintering)
 - 3.2.7. Finishing
- 4. Mechanical Working
 - 4.1. Metals
 - 4.1.1. Forging
 - 4.1.2. Rolling
 - 4.1.3. Extrusion
 - 4.1.4. Rod and Wire Drawing
 - 4.1.5. Sheet Metal Forming
 - 4.2. Plastics
- 5. Polymer Matrix Composites
 - 5.1. Thermoplastic Matrix Composites
 - 5.1.1. Injection Molding
 - 5.1.2. Rotational Molding
 - 5.2. Thermosetting Matrix Composites
 - 5.2.1. Continuous Fiber Composites
 - 5.2.2. Chopped Fiber or Fiber Mat Composites

6. Processing of Fibers
 - 6.1. Glass Fibers
 - 6.2. Carbon or Graphite Fibers
 - 6.3. Other Synthetic Fibers
7. Recycling and Reuse of Materials
 - 7.1. Polymer Recycling
 - 7.1.1. Sorting
 - 7.1.2. Comminution
 - 7.1.3. Decontamination and Reprocessing
 - 7.2. Glass Recycling
 - 7.3. Metals Recycling
 - 7.3.1. Separation Techniques
 - 7.3.2. Secondary Metal Production
8. Joining of Materials
 - 8.1. Metal/Metal Joining
 - 8.1.1. Mechanical Fasteners
 - 8.1.2. Welding
 - 8.1.3. Soldering and Brazing
 - 8.2. Plastic/Plastic Joining
 - 8.2.1. Welding of Thermoplastics
 - 8.3. Ceramic/Ceramic Joining
 - 8.3.1. Reactive Brazing
 - 8.3.2. Adhesive Bonding
 - 8.4. Ceramic/Metal Joining

Processing from the Liquid State

184

Arne K. Dahle, *Senior Lecturer, CRC for Cast Metals Manufacturing (CAST), Department of Mining, Minerals and Materials Engineering, The University of Queensland, Brisbane, Australia*
 David H. StJohn, *Professor, CRC for Cast Metals Manufacturing (CAST), Department of Mining, Minerals and Materials Engineering, The University of Queensland, Brisbane, Australia*

1. Introduction
2. Liquid State
3. Fundamentals of Processing from the Liquid State
 - 3.1. Heat Flow
 - 3.2. Crystallisation
 - 3.2.1. Nucleation
 - 3.2.2. Growth
 - 3.2.3. Microstructure Modification and Control
 - 3.3. Non-equilibrium and Metastable Phase Formation
 - 3.4. Rheological Properties
 - 3.5. Casting Defects
 - 3.5.1. Porosity
 - 3.5.2. Other Casting Defects
4. Processing Methods
 - 4.1. Continuous Casting
 - 4.2. Net-Shape Forming
 - 4.2.1. Sand and Investment Casting
 - 4.2.2. Die Casting
 - 4.2.3. Centrifugal Casting
 - 4.2.4. Semi-solid Casting and Forging
 - 4.2.5. Single-crystal Growth
 - 4.3. Rapid Solidification Processes

Powder Methods

218

Randall M. German, *Pennsylvania State University, USA*

1. Introduction
 - 1.1. Shaping Versus Compaction
 - 1.2. Shaping Technologies
 - 1.3. Compaction Technologies
 - 1.4. Sintering
2. Technical Advantages
3. Example Applications
4. Industry Structure
5. Growth and Economic Trends

Mechanical Working of Materials

242

Roy Crawford, *Department of Mechanical Engineering, The Queen's University of Belfast, Northern Ireland*

1. Introduction
2. Types of Plastic - Effects on Manufacturing Methods
3. Manufacturing Methods for Plastic Parts
 - 3.1. Injection Moulding
 - 3.1.1. Process Innovations
 - 3.1.2. Reaction Injection Moulding
 - 3.1.3. Injection Moulding of Metals and Ceramics
 - 3.2. Extrusion
 - 3.2.1. Manufacturing Methods Based on Extrusion
 - 3.3. Thermoforming
 - 3.4. Rotational Moulding
 - 3.5. Compression Moulding
4. Concluding Comments

Manufacturing of Polymer-Matrix Composites

262

B. Tomas Åström, *Department of Aeronautics, KTH, Sweden*

1. Introduction
2. Applications of Polymer-Matrix Composites
 - 2.1. Automotive Applications
 - 2.2. Marine Applications
 - 2.3. Aerospace Applications
 - 2.4. Construction Applications
 - 2.5. Other Applications
3. Constituent Materials
 - 3.1. Matrices
 - 3.2. Reinforcements
 - 3.3. Preimpregnated Reinforcements
 - 3.4. Core Materials
4. Composite Properties
5. Manufacturing Techniques
 - 5.1. Molds
 - 5.2. Wet Layup
 - 5.3. Prepreg Layup
 - 5.4. Liquid Molding
 - 5.4.1. Resin Transfer Molding
 - 5.4.2. Structural Reaction Injection Molding
 - 5.4.3. Vacuum Infusion
 - 5.5. Compression Molding
 - 5.6. Filament Winding
 - 5.7. Pultrusion
6. Outlook

Fiber Production

296

J.W.S. Hearle, *UK*

1. Introduction
 - 1.1. History of Fiber Production and Usage
 - 1.2. Fiber Dimensions, Properties, and Units
2. Plant Fibers
 - 2.1. Cellulose
 - 2.2. Cotton
 - 2.3. Other Plant Fibers
3. Animal Fibers
 - 3.1. Proteins
 - 3.2. Wool
 - 3.3. Other Hair Fibers
 - 3.4. Silk
4. Manufactured Fibers
 - 4.1. General Features of Production
 - 4.2. Finishes and Additives
5. Regenerated Cellulosic Fibers
 - 5.1. Cellulose Chemistry and the Advent of Manufactured Fibers
 - 5.2. Viscose Rayon
 - 5.3. Lyocell Fibers
 - 5.4. Acetate Fibers
6. Melt-spun Synthetic Fibers
 - 6.1. Polyester (PET)
 - 6.2. Polyamides (nylon 6 and 66)
 - 6.3. Polypropylene
 - 6.4. Other Melt-spun Fibers
7. Solution-spun Synthetic Fibers
 - 7.1. Acrylic Fibers
 - 7.2. Other Vinyl and Vinylidene Fibers
 - 7.3. Elastomeric Fibers
8. High-performance Fibers
 - 8.1. Second-generation Synthetic Fibers
 - 8.2. Glass Fibers
 - 8.3. Carbon Fibers
 - 8.4. Aramid (PPTA) Fibers
 - 8.5. Other Liquid-crystal Fibers
 - 8.6. High-modulus Polyethylene (HMPE) Fibers
 - 8.7. Ceramic Fibers
 - 8.8. Thermally and Chemically Resistant Fibers

Recycling or Reuse of Materials

321

Lucas Reijnders, *IBED, University of Amsterdam, The Netherlands*

1. Introduction
2. Why Reuse or Recycle?
3. Current Practice
4. Options for Near Term Improvement
5. The Ultimate Goal: Recycling in a Steady State Economy

Joining of Advanced Materials

335

Gurel Cam, *Mustafa Kemal University, Antakya (Hatay), Turkey*
Mustafa Kocak, *GKSS Research Center, Geestacht, Germany*

1. Introduction

2. Friction Stir Welding of Aluminum Alloys
 - 2.1. Introduction
 - 2.2. Welding Metallurgy of Friction Stir Welding
 - 2.3. Weld Properties
 - 2.4. Remarks on Friction Stir Welding
3. Joining of Magnesium Alloys
 - 3.1. Introduction
 - 3.2. Welding Metallurgy of Mg-Alloys
 - 3.3. Welding of Mg-Alloys
 - 3.4. Remarks on the Welding of Mg-Alloys
4. Supermartensitic Stainless Steels
 - 4.1. Introduction
 - 4.2. Welding Metallurgy of Supermartensitic Stainless Steels
 - 4.3. Joining of Supermartensitic Stainless Steels
 - 4.4. Remarks on the Welding of Supermartensitic Stainless Steels

VOLUME III

Detection of Defects and Assessment of Serviceability	1
<i>Harold Harper, Harper Consulting Limited, Harrogate, UK</i>	

1. Introduction
2. Defects in Solids
3. Structural Defects
 - 3.1. The Characteristics of Structural Defects
 - 3.2. The Origins of Structural Defects in Solid Materials and Manufactured Products
 - 3.3. The Growth and Development of Structural Defects in Service
4. Nondestructive Testing and Nondestructive Evaluation
5. Nondestructive Testing Methods
 - 5.1. Visual Examination
 - 5.2. Penetrant Testing
 - 5.3. Magnetic Particle Inspection
 - 5.4. Magnetic Flux Leakage
 - 5.5. Potential Drop Testing
 - 5.6. Alternating Current Field Measurement (ACFM)
 - 5.7. Radiography
 - 5.8. Ultrasonic Testing
 - 5.9. Eddy Current Testing
 - 5.10. Acoustic Emission
 - 5.11. Thermal Methods
 - 5.12. Miscellaneous Methods
6. The Performance and Reliability of Nondestructive Testing
7. The Assessment of Serviceability
 - 7.1. Applications
8. Dealing with Defects

Defects Introduced into Metals During Fabrication and Service	48
<i>Andy J. Wilby, British Energy Ltd, Gloucester, UK</i>	
<i>David P. Neale, British Energy Ltd, Gloucester, UK</i>	

1. Introduction

2. Primary Production Defects
 - 2.1. Casting Defects
 - 2.1.1. Pipe and Shrinkage
 - 2.1.2. Inclusions
 - 2.1.3. Segregation
 - 2.1.4. Porosity
 - 2.1.5. Surface Defects
 - 2.1.6. Other Defects
 - 2.2. Forming Defects
 - 2.2.1. Cracks, Laps and Seams
 - 2.2.2. Surface Defects
3. Defects Introduced During Fabrication
 - 3.1. Defects Resulting From Cutting
 - 3.2. Joining Methods
 - 3.2.1. Design Related Defects
 - 3.2.2. Procedure and Process Defects
 - 3.2.3. Metallurgical Factors
 - 3.3. Heat Treatment
 - 3.3.1. Stress relief of machined or welded components
 - 3.3.2. Hardening and quench cracking
 - 3.3.3. Embrittlement
4. Defects Introduced in Service
 - 4.1. Fatigue
 - 4.2. High Temperature Defects
 - 4.2.1. Mechanical property degradation and creep
 - 4.2.2. Environmental interaction
 - 4.2.3. Microstructural Changes
 - 4.3. Wear
 - 4.3.1. Abrasive Wear
 - 4.3.2. Adhesive Wear
 - 4.3.3. Fretting
 - 4.3.4. Erosion
 - 4.3.5. Rolling Contact Wear
 - 4.4. Embrittlement
5. The significance of defects entering service

Non-Destructive Testing and Evaluation of Metals

76

George A. Georgiou, *Jacobi Consulting Limited, London, UK*

1. Introduction
2. Defects in Metals
 - 2.1. Defects in Parent Material
 - 2.2. Defects in Forgings
 - 2.3. Defects in Castings
 - 2.4. Defects in Welds
 - 2.5. Defects in Coatings
 - 2.6. In-Service Defects
3. Non-Destructive Testing Methods for Detecting Defects in Metals
 - 3.1. Parent Material and NDT
 - 3.2. Forgings and NDT
 - 3.3. Castings and NDT
 - 3.4. Welds and NDT
 - 3.5. Coatings and NDT
 - 3.6. In-Service Defects and NDT
4. Evaluation of Non-Destructive Testing Data
 - 4.1. Interpretation of Data
 - 4.2. Acceptance/Rejection Criteria

4.3. Dealing with Defects

Composite Defects and Their Detection**103**Robert Alan Smith, *Structural Materials Centre, QinetiQ Ltd, Cody Technology Park, Farnborough, UK*

1. Introduction
 - 1.1. Scope
 - 1.2. Defects in Composites
 - 1.3. Significance of Defects in Composites
 - 1.4. Detection methods
 - 1.4.1. Detection methods
 - 1.4.2. Low-frequency Vibration Methods
2. Types of Defect in Composites
 - 2.1. Manufacturing Defects
 - 2.2. In-service Defects
3. Ultrasonic Inspection Methods
 - 3.1. Basic Ultrasonics
 - 3.1.1. Ultrasound
 - 3.1.2. Interaction with Materials
 - 3.2. Choice of Frequency
 - 3.3. Defect Detection and Characterization
 - 3.3.1. Detection
 - 3.3.2. Delamination Sizing
 - 3.3.3. Measurement of Bulk Attenuation
 - 3.4. Ultrasonic Imaging Techniques
 - 3.4.1. General Imaging Principles
 - 3.4.2. Ultrasonic A-scan
 - 3.4.3. Ultrasonic B-scan
 - 3.4.4. Ultrasonic C-scan
 - 3.4.5. Ultrasonic Depth Scan
 - 3.4.6. Pseudo-3D Imaging
 - 3.5. Production Inspection Techniques
 - 3.5.1. Immersion Testing
 - 3.5.2. Ultrasonic Jet Probes
 - 3.6. In-service Inspection Techniques
 - 3.6.1. Manual Single-point Inspection
 - 3.6.2. Manual Scanning and Imaging
 - 3.6.3. Automated Scanning and Imaging
 - 3.6.4. Roller Probes
 - 3.6.5. Multi-element Array Probes
 - 3.7. Specialist Ultrasonic Techniques
 - 3.7.1. Velocity Measurement
 - 3.7.2. Full Ultrasonic Waveform Capture
 - 3.7.3. Acoustic Backscattering
 - 3.7.4. Polar Scans
 - 3.7.5. Laser Ultrasound Techniques
 - 3.7.6. Lamb Wave Propagation
4. Low-frequency Vibration Methods
 - 4.1. Global Assessment
 - 4.1.1. Natural Frequency Measurement
 - 4.1.2. Damping Measurements
 - 4.2. Local Assessment
 - 4.2.1. Tap Test
 - 4.2.2. The Mechanical Impedance Method
 - 4.2.3. Membrane Resonance Method
 - 4.2.4. Velocimetric and Other Pitch-catch Methods
 - 4.2.5. Choice of Local Technique

5. Acoustic Emission and Acousto-Ultrasonics
6. X-Radiography
7. Optical Methods
8. Thermal Methods
 - 8.1. Thermal Imaging
 - 8.2. Pulsed Thermography
 - 8.3. Lock-in Thermography

Corrosion Detection and Diagnosis

144

Einar Bardal, *Norwegian University of Science and Technology, Norway*J.M. Drugli, *SINTEF Materials Technology, Norway*

1. Introduction
2. Inspection Organization
3. Inspection, Detection and Monitoring Methods
 - 3.1. Overview
 - 3.2. Visual Inspection
 - 3.3. Radiography
 - 3.4. Ultrasonic Testing
 - 3.5. Eddy Currents
 - 3.6. Magnetic Particle Inspection (MPI)
 - 3.7. Liquid Penetrant
 - 3.8. The Electric Field Signature Method (FSM)
 - 3.9. Acoustic Emission
 - 3.10. Leak Detection
 - 3.11. Corrosion Monitoring
 - 3.12. Pigging Devices
4. Treatment and Analysis of Inspection Results
 - 4.1. Description and Evaluation of Observations and Conditions
 - 4.2. Diagnosis Based on Description of Attack and Service Conditions—Definition of Corrosion Forms
 - 4.3. Characteristic Features and Conditions of Various Corrosion Forms
 - 4.3.1. Uniform (General) Corrosion
 - 4.3.2. Galvanic (Two-metal) Corrosion
 - 4.3.3. Thermogalvanic Corrosion
 - 4.3.4. Crevice and Deposit Corrosion
 - 4.3.5. Pitting Corrosion
 - 4.3.6. Intergranular Corrosion (IC) and Exfoliation Corrosion
 - 4.3.7. Selective Corrosion (SC) (Selective Leaching)
 - 4.3.8. Erosion Corrosion
 - 4.3.9. Cavitation Corrosion
 - 4.3.10. Fretting Corrosion
 - 4.3.11. Stress Corrosion and Hydrogen Assisted Cracking
 - 4.3.12. Corrosion Fatigue
 - 4.3.13. Corrosion under some Special Environmental Conditions
 - 4.4. Further Analysis
5. From Diagnosis to Determination of Solution(s), Recommendations and Preventive Actions

Materials of the Future

165

Philip Ball, *Consultant Editor, Nature, London, UK*

1. Introduction
2. Synthesis and Processing
3. Biomedical Materials
4. Smart Materials
5. Biomimetics and Self-assembly

6. Nanoscale Materials and Assembly
7. Future Information Technologies
8. Display Technology
9. Ultrastrong Fibers
10. Materials Made To Measure

Smart Materials

206

Brian Culshaw, *Strathclyde University, Glasgow, UK*

1. Introduction
2. Responsive Materials in Engineering
3. Instrumented Structures: Add-ons for Smart Materials
4. Conventional Smart Materials
 - 4.1. Piezoelectric Materials
 - 4.2. Electrostrictive Materials
 - 4.3. Magnetostrictive Materials
 - 4.4. Electro-rheological and Magneto-rheological Fluids
 - 4.5. Shape Memory Alloys (SMAs)
5. Micromechanics: MEMS
6. Chemically Triggered Mechanically Responsive Materials
7. Carbon: Nanotubes and Bucky Balls
8. Concluding Comments

Materials for Clean Energy Conversion

235

Harumi Yokokawa, *National Institute of Materials and Chemical Research, Tsukuba, Ibaraki, Japan*

1. Introduction
2. Comparison between Combustion Processes and Fuel Cells for Energy Conversion
 - 2.1. Combustion Process related to Heat Engines
 - 2.2. Principle of Fuel Cells
 - 2.3. Conversion Efficiency of Fuel Cells
 - 2.4. Use of Natural Gases
 - 2.5. Characteristic Features in Utilization of Fuel Cells
3. Materials Requirements as Electrochemical Energy Converters
 - 3.1. Electrolyte
 - 3.2. Electrodes
 - 3.3. Interconnects
 - 3.4. Comparison between PEFC and SOFC
 - 3.5. Comparison with Turbines
 - 3.6. Fabrication Technology
4. High-temperature Solid Oxide Fuel Cells
 - 4.1. Additional Important Requirements for Solid Oxide Fuel Cells
 - 4.2. How to Meet the Requirements from the Materials-science Point of View
 - 4.3. Valence Stability and Importance of Materials Thermodynamics
 - 4.4. Valence Stability of SOFC Materials
 - 4.5. Materials Behavior during Fabrication Process and under Cell Operation
5. Future Trends
 - 5.1. Fuel Flexibility and Increase of Conversion Efficiency
 - 5.2. New Materials
 - 5.3. Cost Reduction

Aerospace and Space Materials	258
Manfred Peters, <i>DLR - Institute of Materials Research, DLR, German Aerospace Center, Cologne, Germany</i>	
Christoph Leyens, <i>DLR - Institute of Materials Research, DLR, German Aerospace Center, Cologne, Germany</i>	

1. Introduction
2. Aluminum Alloys
 - 2.1. Engineering Properties
 - 2.2. Cost-effective Processing
3. Titanium Alloys and Aluminides
 - 3.1. Microstructures and Mechanical Properties of Titanium Alloys
 - 3.2. Development of Titanium Aluminides
 - 3.3. Oxidation and Coatings
 - 3.4. Cost-effective Processing
4. Superalloys
 - 4.1. Microstructure and Properties
 - 4.2. Alloys and Developments
 - 4.3. Coatings
5. Ceramics
6. Composites
 - 6.1. Polymer Matrix Composites
 - 6.2. Metal Matrix Composites
 - 6.2.1. Aluminum-based Composites
 - 6.2.2. Titanium-based Composites
 - 6.3. Ceramic Matrix Composites
7. Outlook
