CONTENTS

Allelopathy and Chemical Defense **1** Franz Hadacek, *Department of Chemical Ecology and Ecosystem Research, University of Vienna, Austria*

1. Introduction
2. Primary and Secondary Metabolites
3. Biological Activity
4. Chemical Defense in Plants
 - 4.1. Biosynthesis and Structural Diversity
 - 4.2. Constitutive Defenses
 - 4.3. Induced Defenses
 - 4.4. Plant Defense Theories
 - 4.5. Allelopathy as Plant–Plant Interaction
 - 4.6. Seaweeds and Terrestrial Plants
5. Chemical Defense of Microorganisms
 - 5.1. Biosynthesis and Structural Diversity
 - 5.2. Bacteria
 - 5.3. Fungi
6. Chemical Defense of Animals
 - 6.1. Biosynthesis and Structural Diversity
 - 6.2. Insects
 - 6.3. Anurans
 - 6.4. Sponges and Other Benthic Invertebrates
7. Beyond Chemical Defense: Secondary Metabolites and Biodiversity

Chemical Defense and Mammalian Herbivores **55** Bruce A. Kimball, *USDA/WS/National Wildlife Research Center, Fort Collins, and Graduate Degree Program in Ecology, Colorado State University, Fort Collins, USA* Frederick D. Provenza, *Utah State University, Department of Forest, Range, and Wildlife Sciences, Logan, USA.*

1. Plant Metabolism
 - 1.1. Primary Metabolism
 - 1.2. Secondary Metabolism
2. Phytochemical Variation in Plants
 - 2.1. Variation within a Population
 - 2.2. Variation within an Organism
3. Plant Defense Theory
4. Mammalian Metabolism of Phytochemicals
 - 4.1. Digestion and Oxidation
 - 4.2. Detoxification
5. Mammalian Herbivory
 - 5.1. The Genome
 - 5.2. Affective and Cognitive Learning
 - 5.3. Palatability
 - 5.4. Social Learning
 - 5.5. Nutritive State
 - 5.6. The Power of Choice
 - 5.7. When Learning Fails

Foraging and Food Choice in Phytophagous Insects **72** Reginald Frederick Chapman, *Division of Neurobiology, University of Arizona, USA*

1. The occurrence of phytophagy

2. Diet breadth
3. Foraging strategies
4. Plant secondary compounds; the determinants of diet breadth
 - 4.1. The effects of concentration
 - 4.2. Concentration relative to other compounds
 - 4.3. Genetic differences
 - 4.4. Recent experience of the individual
5. Avoiding the effects of plant secondary compounds
6. Odors of plant secondary compounds
7. Pharmacophagy
8. Secondary compounds and insect evolution

Chemical Defense in Invertebrates

102

Julia Kubanek, School of Biology and School of Chemistry and Biochemistry, Georgia Institute of Technology, Atlanta, Georgia, USA

1. Introduction
 - 1.1. Why be defended?
 - 1.2. Variations in chemical defense due to selection pressure
 - 1.3. To kill or to deter?
2. Mechanisms of acquiring chemical defenses
 - 2.1. Sequestration from prey or plants
 - 2.2. Sequestration from kin or mates
 - 2.3. Sequestration from symbionts and associational defenses
 - 2.4. De novo biosynthesis
3. Delivery of chemical defenses
 - 3.1. Optimal distribution of defenses within organisms
 - 3.2. The release of chemical defenses from glands and organs
 - 3.3. Diffusion into the environment
 - 3.4. Activated chemical defenses
4. Conclusions

Chemical Mimicry

120

K. F. Haynes, Department of Entomology, University of Kentucky, USA

1. Introduction
2. Propaganda
 - 2.1. Mimicking sexual signals
 - 2.2. Mimicking food cues
 - 2.3. Mimicry of defensive signals
3. Stealth: Escaping detection
 - 3.1. Social insects and their symbionts
 - 3.2. Wolf in sheep's clothing
4. Discoveries of chemical mimicry

Chemical Triggers in Breeding Cycles

133

Murray S. Blum, Department of Entomology, University of Georgia, Athens, Georgia 30602 USA

1. Introduction
2. Sex Pheromones as Reproductive Stimuli
3. Glandular Origins of Sex Pheromones
4. Sex Pheromones as Eclectic Natural Products
5. Parsimony of Sexual Pheromones
6. Plant Compounds and Sexual Attractants
7. Distribution of Plant and Animal Sex Pheromones

- 7.1. Bacteria (Eubacteria)
- 7.2. Brown Algae (Phaeophyta)
- 7.3. Green Algae (Chlorophyta)
- 7.4. Ascomycetous Yeasts (Saccharomycetes)
- 7.5. Basidiomycetous Yeasts (Heterobasidiomycetes)
- 7.6. Mycelial Fungi
 - 7.6.1. Oomycota
 - 7.6.2. Chytridiomycota
 - 7.6.3. Zygomycota
- 7.7. Ciliates (Ciliophora)
- 7.8. Rotifers (Rotifera)
- 7.9. Nematodes (Nematoda)
- 7.10. Mollusks (Mollusca)
- 7.11. Polychaete Worms (Annelida)
- 7.12. Arthropods (Arthropoda)
 - 7.12.1. Crustacea
 - 7.12.2. Mites and Spiders (Arachnida)
 - 7.12.3. Insects (Insecta)
- 7.13. Lampreys (Agnatha)
- 7.14. Boney Fish (Osteichthyes)
- 7.15. Salamanders, Newts, and Frogs (Amphibia)
- 7.16. Reptiles
- 7.17. Mammals (Mammalia)
 - 7.17.1. Hamsters, Rats, and Mice
 - 7.17.2. Asiatic Elephant
 - 7.17.3. The Domestic Pig
 - 7.17.4. Humans (Primates)

Chemicals in Host-Parasitoid and Prey-Predator Relations

171

C. Lozano, *Department of Agroecology and Plant Protection, Estacion Experimental del Zaidin, Consejo Superior de Investigaciones Cientificas, Granada, Spain*

- 1. Introduction
- 2. Semiochemicals influencing the behaviour of parasitoids and predators
 - 2.1. Host habitat location
 - 2.2. Host location
 - 2.2.1. Long distance
 - 2.2.2. Short distance
 - 2.3. Parasitoid and predator semiochemicals
 - 2.4. Use of semiochemicals in pest control
- 3. Pesticides influencing the host-parasitoid and prey-predator populations
 - 3.1. The host–parasitoid–pesticide models
 - 3.2. Host depression and resurgence
 - 3.3. Selectivity of pesticides
- 4. Chemical defenses
- 5. Conclusions

Chemical Signals as Attractants, Repellents and Aggregation Stimulants

186

Baldwyn Torto, *International Center of Insect Physiology and Ecology, Kenya*

- 1. Introduction
- 2. Classification of Chemical Signals
- 3. Detection and Decoding of Semiochemicals
- 4. Approaches to the Isolation and Identification of Semiochemicals
- 5. Attractants
 - 5.1. Plant-produced attractants

- 5.2. Vertebrate-produced attractants
- 5.3. Sex attractants
6. Repellents
7. Aggregation stimulants
8. Semiochemicals and Parsimony
9. Practical Applications
10. Conclusions

Chemical Ecology of Plant-Animal Interactions

200

Miguel E. Alonso-Amelot, *Grupo de Química Ecológica, Departamento de Química, Facultad de Ciencias, Universidad de Los Andes, Mérida, Venezuela*

1. Introduction
2. Why plants apparently play the losing role
3. How plants survive under a herbivore dominated world
 - 3.1. Carnivore pressure on herbivores
4. Considerations from evolution
 - 4.1. The sophisticated chemical machinery in plants
 - 4.2. The chemical gates: enzymes
5. Secondary metabolites and the need to communicate
 - 5.1. Beneficial animal-plant associations: flowers, fruits, and seeds
 - 5.1.1. The early flowers without characters attractive to animals
 - 5.1.2. The appearance of modern attractive flowers
 - 5.1.2.1. The pigments of the petals
 - 5.1.2.2. The scents and the gifts of flowers
 - 5.1.3. Seed dispersal
 - 5.1.4. Controlled shelter or living with the enemy
 - 5.1.4.1. Mechanical protection
 - 5.1.4.2. Chemical lures and mutual protection: the myrmecophyte plants
 - 5.2. Plant chemicals that modify the behavior of herbivores
 - 5.2.1. Chemical feeding elicitors
 - 5.2.2. Chemical antiherbivory: How plants chemically deter herbivore feeding
 - 5.2.2.1. Feeding deterrents and repellents, and their allocation
 - 5.2.2.2. Translocation of xenobiotics
 - 5.2.2.3. Xenobiotics are produced in various forms
 - 5.2.2.4. Uneven distribution of plant allomones
 - 5.2.3. Chemical interference with larval development of insects
 - 5.2.4. Blockers of gut activity
 - 5.3. Poisoning
6. The counterattack of herbivores
 - 6.1. Avoidance of feeding sites containing xenobiotic chemicals
 - 6.2. Behavioral neutralization or reduction of the defense to bearable levels
 - 6.3. Chemical modification of the plant xenobiotics to harmless or rapidly excretable compounds
 - 6.4. Sequestration of obnoxious chemicals
7. Plant Chemical defenses as feeding flags
8. Plant volatiles in multitrophic interactions
9. Old and emerging paradigms

The Ecological and Physiological Roles of Bacterial Cell-Cell Signalling

247

Scott A. Rice, *The Centre for Marine Biofouling and Bio-Innovation and The School of Biotechnology and Biomolecular Science, The University of New South Wales, Australia 2052.*

Michael Givskov, *Department of Microbiology, The Technical University of Denmark, DK-2800 Lyngby, Denmark*

Staffan Kjelleberg, *The Centre for Marine Biofouling and Bio-Innovation and The School of Biotechnology and Biomolecular Science, The University of New South Wales, Australia 2052*

1. Introduction
2. Bacterial Signalling systems
 - 2.1. N-acylated homoserine lactones
 - 2.2. AI-2 signalling
 - 2.3. Signalling in Gram positive bacteria
 - 2.4. Signalling in Myxobacteria
3. Ecological role of bacterial signals
 - 3.1. Symbiosis with light organs of marine organisms
 - 3.2. Quorum sensing in surface colonization
4. Natural defences against quorum sensing
 - 4.1. Lessons from the sea
 - 4.2. Other sources of inducers and signal antagonists
5. Conclusions

Chemical Ecology of Marine Bacteria and Algae

265

Slattery, *Department of Pharmacognosy, The University of Mississippi, USA*

D. J. Gochfeld, *Department of Pharmacognosy, The University of Mississippi, USAM.*

1. Introduction
2. Ecological Roles of Bacterial and Algal Compounds
 - 2.1. Feeding Deterrence
 - 2.2. Allelopathic Functions
 - 2.3. Associational Resistance
 - 2.4. Pheromones and Settlement Cues
3. Temporal and Spatial Variability of Defensive Compounds
 - 3.1. Intraspecific Patterns
 - 3.2. Geographic Patterns
 - 3.3. Environmental Mediation of Chemical Variation
4. Case Study: *Dictyota* spp.
5. Conclusions

Chemical Signals in Coral Reefs

288

M. Puyana, *Facultad de Ciencias, Departamento de Quimica, Universidad Nacional de Colombia, Colombia*

1. Introduction
2. Chemical signaling in coral reefs
 - 2.1. Feeding Attractants
 - 2.2. Feeding Deterrents
 - 2.3. Predator detection and alarm substances
 - 2.4. Induced Defenses
 - 2.5. Mate and kin recognition
 - 2.6. Associational chemical defenses
 - 2.7. Chemical signals in gamete attraction and spawning
 - 2.8. Symbiotic associations
 - 2.9. Larval settlement
 - 2.10. Antifouling
 - 2.11. Allelopathy
3. Conclusions

Chemical Communication in Fish

314

N. E. Stacey, *Department of Biological Sciences, University of Alberta, Canada*

B.D. Wisenden, *Biosciences Department, Minnesota State University, Moorhead, USA*

P. W. Sorensen, *Department of Fisheries, Wildlife, and Conservation Biology, University of Minnesota, USA*

1. Introduction
2. Communication, or Spying?
3. The Olfactory Sense in Fish
4. Reproductive Responses to Pheromones
 - 4.1. Goldfish and Closely Related Species
 - 4.1.1. The Female Preovulatory Steroid Pheromone
 - 4.1.2. The Female Postovulatory Prostaglandin Pheromone
 - 4.1.3. Female Responses
 - 4.1.4. The Male Steroid Pheromone
 - 4.1.5. Interactions Among Males
 - 4.2. Zebrafish
 - 4.3. Catfish
 - 4.4. Salmonids
 - 4.4.1. Genus *Salmo*
 - 4.4.2. Genus *Salvelinus*
 - 4.4.3. Genus *Oncorhynchus*
 - 4.4.4. Conclusions
 - 4.5. Gobies
5. Chemically-Mediated Anti-Predator Strategies
 - 5.1. Classes of Chemical Cues
 - 5.1.1. Chemical deterrents
 - 5.1.2. Disturbance Cues
 - 5.1.3. Injury-Released Chemical Alarm Cues
 - 5.1.4. Chemical Cues Released by Predators
 - 5.1.5. Cues from the Predator's Digestive Tract
 - 5.2. Chemically-Mediated Responses to Predation Risk
 - 5.2.1. Short-Term Behavioral Responses
 - 5.2.2. Long-Term Responses
 - 5.2.3. Learned and Innate Antipredator Responses
6. Aggregation and Migration
 - 6.1. Social Groupings: Familial and Status Recognition
 - 6.2. Schooling Cues
 - 6.3. Migratory Aggregants and Long Distance Attractants
 - 6.3.1. Anadromous and Landlocked Salmonids
 - 6.3.2. Catadromous Freshwater Eels: Family *Anguillidae*
 - 6.3.3. Amphidromous Species: Galaxids and Tropical Freshwater Gobies
 - 6.3.4. The Anadromous Sea Lamprey: a Well Understood Model

Chemical Disruption of Biological Phenomena

345

Victoria V. Cheung, *Plymouth Environmental Research Center, University of Plymouth, Drake Circus, Plymouth, UK.*

Tamara S. Galloway, *Plymouth Environmental Research Center, University of Plymouth, Drake Circus, Plymouth, UK.*

Michael H. Depledge, *Environment Agency, Rio House, Aztec West, Bristol, UK.*

1. Introduction
2. Biological Responses to Chemicals in the Environment
 - 2.1. Biological Effects of Heavy Metals
 - 2.2. Biological Effects of Organic Contaminants
 - 2.3. Biological Effects of Radiation
3. Detection and Assessment: Biomarkers
4. Risk Assessment
5. Future Perspectives

Environmental Endocrine Disruption: Can the Endocrine Disruption Hypothesis be Validated in the Invertebrate Phyla?

366

Tamara S. Galloway, *University of Plymouth, UK*Michael H. Depledge, *University of Plymouth, UK*

1. Introduction
2. Endocrine Disruption: A Threat to Ecosystem Health?
3. Endocrine Disrupting Chemicals
4. Xenoestrogens: Mechanism of Action
5. Endocrine Disruption in Invertebrates
 - 5.1. Invertebrate Endocrine Function
 - 5.2. Evidence of Endocrine Disruption in Invertebrates
6. Regulatory Considerations
 - 6.1. OECD Activity on Endocrine Disrupters Test Guidelines Development
 - 6.2. The Endocrine Disrupter Screening Program Developed by the US EPA
 - 6.3. Continued Development of the EDSTAC/OECD Testing Guidelines
7. Detection and Assessment: Bioassays and Biomarkers
8. A Strategy for the Detection of Endocrine Disruption in Invertebrates
9. Conclusion and Future Perspectives

Biosynthesis of Chemical Signals de novo Synthesis and Secondary Metabolites

393

J. G. Romagni, *University of St. Thomas, Houston, TX USA*

1. Introduction
2. Polyketide pathway: fatty acids and polyketides
 - 2.1. General Biosynthesis
 - 2.1.1. Anthraquinones
 - 2.1.2. Secondary fatty acids and prostaglandins
 - 2.2. Alternative pathways for polyketide biosynthesis
3. Shikimate pathway
 - 3.1. Biosynthesis
 - 3.1.1. Chorismic acid derivatives
 - 3.1.2. Cinnamic acid and derivatives
 - 3.1.3. Lignans
 - 3.1.4. Flavenoids
 - 3.2. Control of Shikamic Acid Derivatives
4. Mevalonic acid pathway: Isoprenoids
 - 4.1. Biosynthesis
 - 4.1.1. Monoterpenes
 - 4.1.2. Sesquiterpenes
 - 4.1.3. Diterpenoids (C₂₀)
 - 4.1.4. Control of isoprenoid biosynthesis
 - 4.1.5. Non-mevalonate terpenoid biosynthesis

Inter and Intraspecificity of Chemical Communication

416

A. Guerrero, *Department of Biological Organic Chemistry, Jordi Girona Barcelona, Spain*

1. Introduction
2. Terms used in chemical communication
 - 2.1. Allelochemicals
 - 2.2. Pheromones
3. Interspecific chemical communication
 - 3.1. Allomones
 - 3.2. Kairomones
4. Intraspecific chemical communication
 - 4.1. Lepidoptera pheromones
 - 4.1.1. Bioassays

- 4.1.2. Biosynthesis
- 4.2. Male pheromones. The queen butterfly: A case study
- 4.3. Coleoptera pheromones
- 4.4. Pheromones of social insects
- 4.5. Practical uses of pheromones
 - 4.5.1. Monitoring
 - 4.5.2. Mass trapping
 - 4.5.3. Mating disruption

The Chemical Ecology of Mustelids

438

M. J. Davies, *Department of Biological Sciences, Hull University, UK*

1. Introduction
2. Scent marking in Mustelids
 - 2.1. The Function of scent marking
 - 2.2. Sources of odor
 - 2.2.1. Urine and Faeces
 - 2.2.2. Skin glands
 - 2.2.3. Scent producing organs
 - 2.3. The chemistry of scent marking
 - 2.4. Initial work on scent-marking behavior
3. The Eurasian or European Otter (*Lutra lutra*)
 - 3.1. Introduction
 - 3.2. Difficulties in surveying otter populations
 - 3.3. Spraints and scent marking behavior
 - 3.3.1. Seasonal spraint deposition and sexual behavior
 - 3.3.2. Territoriality
 - 3.3.3. Social organization
 - 3.3.4. Resource marking
 - 3.3.5. Individual identity
 - 3.4. Road kill and manipulation of otter movements
 - 3.5. Investigation of gland material
4. The European Badger (*Meles meles*)
 - 4.1. Introduction
 - 4.2. Badger scent sources
 - 4.3. Scent marking behavior
 - 4.3.1. Food Location and Detection of danger
 - 4.3.2. Individual and clan identity
 - 4.3.3. Navigation
 - 4.3.4. Territoriality
 - 4.3.5. Social status
 - 4.4. Investigation of gland material
 - 4.5. Badgers and Bovine Tuberculosis
5. The Future of Mustelid Chemical Ecology Research.

Chemical Ecology and Pest Management

475

Tessa R. Grasswitz, *Harper Adams University College, Newport, Shropshire. UK.*

1. Introduction
2. Semiochemicals and their application in insect pest management
 - 2.1. Sex and Aggregation Pheromones
 - 2.1.1. Insect Sex Pheromones As Monitoring Tools
 - 2.1.2. Insect Sex Pheromones As A Means Of Control: Mating Disruption
 - 2.1.3. Insect Sex Pheromones As A Means Of Control: The 'Attracticide' Strategy
 - 2.1.4. Insect Aggregation Pheromones As A Means Of Control: Mass Trapping
 - 2.2. Other Pheromones

- 2.2.1. Oviposition-Deterring or 'Marking' Pheromones
- 2.2.2. Alarm Pheromones
- 2.3. Kairomones And Their Potential In Insect Pest Management
- 2.4. Synomones And Their Potential In Insect Pest Management
- 2.5. Allomones And Their Potential In Insect Pest Management
- 2.6. Apneumones And Miscellaneous Compounds
- 3. Semiochemicals and their application in vertebrate pest management
- 4. Conclusion

Chemical Ecology in Relation to Medicine and Pharmaceuticals **491**

Julio A. Zygadlo, *Department of Chemistry, Universidad Nacional de Cordoba, IMBIV, Argentina*

Raquel M. Gleiser, *Department of Pathobiological Sciences, Louisiana State University, USA and CONICET, Argentina*

- 1. Introduction
- 2. Chemical Defenses
 - 2.1. Anti-Predator Mechanisms
 - 2.2. Antimicrobial Defenses
 - 2.2.1. From Plants
 - 2.2.2. From Fungi
 - 2.2.3. From Arthropods
- 3. Symbiosis
 - 3.1. Terrestrial organisms
 - 3.2. Marine Organisms
 - 3.3. Therapeutic Model
- 4. Parasitism: A New Approach to Studying the Biochemistry of Defenses
- 5. Leads
- 6. Natural Products with a Narrow Biological Function
- 7. When the Mechanism of Action of a Compound is More Important than its Biological Function
- 8. The Management of Vectors: a Control Tool for Vector-Borne Diseases
- 9. New Windows for Pharmaceutical Industries
- 10. Conclusions
