

CONTENTS

BIOTECHNOLOGY

Biotechnology Volume 1

e-ISBN: 978-1-84826-255-3

ISBN : 978-1-84826-705-3

No. of Pages: 496

Biotechnology Volume 2

e-ISBN: 978-1-84826-256-0

ISBN : 978-1-84826-706-0

No. of Pages: 320

Biotechnology Volume 3

e-ISBN: 978-1-84826-257-7

ISBN : 978-1-84826-707-7

No. of Pages: 394

Biotechnology Volume 4

e-ISBN: 978-1-84826-258-4

ISBN : 978-1-84826-708-4

No. of Pages: 372

Biotechnology Volume 5

e-ISBN: 978-1-84826-259-1

ISBN : 978-1-84826-709-1

No. of Pages: 386

Biotechnology Volume 6

e-ISBN: 978-1-84826-260-7

ISBN : 978-1-84826-710-7

No. of Pages: 382

Biotechnology Volume 7

e-ISBN: 978-1-84826-261-4

ISBN : 978-1-84826-711-4

No. of Pages: 500

Biotechnology Volume 8

e-ISBN: 978-1-84826-262-1

ISBN : 978-1-84826-712-1

No. of Pages: 482

Biotechnology Volume 9

e-ISBN: 978-1-84826-263-8

ISBN : 978-1-84826-713-8

No. of Pages: 406

Biotechnology Volume 10

e-ISBN: 978-1-84826-264-5

ISBN : 978-1-84826-714-5

No. of Pages: 538

Biotechnology Volume 11

e-ISBN: 978-1-84826-265-2

ISBN : 978-1-84826-715-2

No. of Pages: 476

Biotechnology Volume 12

e-ISBN: 978-1-84826-266-9

ISBN : 978-1-84826-716-9

No. of Pages: 378

Biotechnology Volume 13

e-ISBN: 978-1-84826-267-6

ISBN : 978-1-84826-717-6

No. of Pages: 364

Biotechnology Volume 14

e-ISBN: 978-1-84826-268-3

ISBN : 978-1-84826-718-3

No. of Pages: 348

Biotechnology Volume 15

e-ISBN: 978-1-84826-269-0

ISBN : 978-1-84826-719-0

No. of Pages: 342

CONTENTS

VOLUME I

Biotechnology	1
Horst Werner Doelle, <i>MIRCEN-Biotechnology, Brisbane, and the Pacific Regional Network, University of Queensland, St Lucia, Australia</i>	
Edgar J. DaSilva, <i>Section of Life Sciences, Division of Basic and Engineering Sciences, UNESCO, France</i>	

1. Historical Development
2. Present Development
 - 2.1 Fundamentals in Biotechnology
 - 2.2 Agriculture
 - 2.3 Medicine
 - 2.4 Industry
 - 2.5 Environment
 - 2.6 Social aspects
3. Future Development

Fundamentals in Biotechnology	21
Horst Werner Doelle, <i>MIRCEN-Biotechnology Brisbane and Pacific Regional Network, Brisbane, Australia</i>	
Edgar J. DaSilva, <i>Section of Life Sciences, Division of Basic and Engineering Sciences, UNESCO, France</i>	

1. Introduction
2. Cell Characteristics
3. Cell Cultivation
4. Chemical Functions
5. Mutation and Gene Technology
6. Biosafety

Microbial Cell Culture	34
Horst Werner Doelle, <i>MIRCEN-Biotechnology Brisbane and Pacific Regional Network, Brisbane, Australia</i>	

1. Introduction
2. Nutrition
 - 2.1 Macronutrients
 - 2.1.1 Carbon Source
 - 2.1.2 Nitrogen Source
 - 2.1.3 Sulfur Source
 - 2.1.4 Phosphorous Source
 - 2.1.5 Others
 - 2.2 Micronutrients
 - 2.2.1 Tracer elements
 - 2.2.2 Iron
 - 2.3 Growth Factors
 - 2.4 Medium Composition
3. Growth
 - 3.1 Measurement
 - 3.1.1 Dry Weight
 - 3.1.2 Optical Measurement
 - 3.1.3 Cell Count
 - 3.1.4 Cell Constituents

- 3.1.5 Optimization
- 4. Cultivation Systems
 - 4.1 Batch Cultivation
 - 4.2 Continuous Cultivation
 - 4.3 Fed-Batch Cultivation
 - 4.4 Recycling Cultivation
 - 4.5 Inoculum Cascading
 - 4.6 Solid-state and Solid-substrate Cultivation
 - 4.6.1 Principles
 - 4.6.2 Inoculum
 - 4.6.3 Bioreactor Design
 - 4.6.4 Application

Algal Cell Culture

67

Peter A. Thompson, *CSIRO Marine and Atmospheric Research, Hobart, Tasmania, 7000, Australia.*

- 1. Introduction
- 2. Cell culture characteristics
 - 2.1 General considerations
 - 2.1.1 Morphology
 - 2.1.2 Physiology
 - 2.1.3 Reproduction
 - 2.2 Habitats
 - 2.3 Isolation
 - 2.4 Culture purification
 - 2.5 Sampling and counting algal cells
 - 2.6 Aseptic culture transfers
- 3. Growth and nutrition
 - 3.1 General remarks
 - 3.2 Artificial media
 - 3.3 Enriched natural waters
 - 3.4 Water supply and processing
 - 3.5 Illumination
 - 3.6 Preparation and use of glassware and other materials
- 4. Cultivation techniques
 - 4.1 General considerations
 - 4.2 Stock cultures
 - 4.3 Batch cultivation
 - 4.3.1 Lag phase
 - 4.3.2 Exponential phase
 - 4.3.3 Declining growth
 - 4.3.4 Stationary phase
 - 4.3.5 Death phase
 - 4.4 Semicontinuous cultivation
 - 4.5 Continuous cultivation
 - 4.5.1 Chemostats
 - 4.5.2 Turbidostats
 - 4.5.3 Cyclostats
 - 4.6 Final remarks on culture systems
- 5. Selected organisms
 - 5.1 Cyanobacteria
 - 5.2 *Dunaliella salina*
 - 5.3 Some other aquaculture species
- 6. Scale-up considerations
 - 6.1 Light
 - 6.2 Nutrient inputs
 - 6.3 Waste products

- 6.4 Contamination
 - 6.4.1 Other algal species
 - 6.4.2 Pests
 - 6.4.3 Predators
- 7. Production system classified by product type
 - 7.1 High value, low volume, intensive culture
 - 7.2 Lower value, greater volume
 - 7.3 Live feeds
- 8. Scale-up technology
 - 8.1 Harvesting
 - 8.2 Drying
- 9. Molecular algal biotechnology

Plant Cell Culture

110

Mary Taylor, *South Pacific Commission, Fiji*

- 1. Introduction
- 2. The Basics of Plant Cell Culture
- 3. Propagation of Plant Material
 - 3.1 Micropropagation\
 - 3.2 Somatic Embryogenesis
- 4. Plant Improvement
 - 4.1 Callus and Suspension Cultures
 - 4.2 Protoplast Fusion
 - 4.3 Haploid Culture
 - 4.4 Embryo Rescue
- 5. Conservation
 - 5.1 Embryo Culture
 - 5.2 Germplasm Storage *In Vitro*
- 6. Utilization of Plant Germplasm
 - 6.1 Germplasm Exchange
 - 6.2 Production of Secondary Metabolites
- 7. Conclusion

Mammalian Cell Culture

126

Christopher P. Marquis, *Department of Biotechnology, University of New South Wales, Sydney, NSW, 2052, AUSTRALIA*

- 1. Introduction
- 2. A brief history of mammalian cell culture
- 3. Primary and continuous cultures
 - 3.1 Primary Cultures
 - 3.2 Continuous Cell Lines
 - 3.3 Organ culture
 - 3.4 Some useful cell lines
 - 3.4.1 CHO Cells
 - 3.4.2 VERO cells
 - 3.4.3 Sp2/0 myelomas
- 4. Methods in mammalian cell culture
 - 4.1 Media and environment
 - 4.1.1 Media
 - 4.1.2 Environment
 - 4.2 Bioreactor design
 - 4.2.1 Anchorage-dependence
 - 4.2.2 Surfaces for tissue culture growth
 - 4.2.3 Bioreactor Types

5. Applications of cell culture in virus production
 - 5.1 Viral Vectors for Gene Therapy
 - 5.2 Key areas for future development of cell culture related to gene therapy
6. Application of cell culture in biopharmaceutical production
 - 6.1 Antibodies for human therapy
7. Tissue engineering and cell culture
 - 7.1 Bone and Cartilage
 - 7.2 Hepatic cell culture
 - 7.3 Haematopoietic stem cell culture

Cell Thermodynamics and Energy Metabolism

151

Horst Werner Doelle, *MIRCEN-Biotechnology Brisbane and Pacific Regional Network, Brisbane, Australia*

1. Introduction
2. Concepts of Thermodynamics
 - 2.1 First Law of Thermodynamics
 - 2.2 Second Law of Thermodynamics
 - 2.3 Free Energy
3. Concepts of Energy Production and Conservation
 - 3.1 Principles of Electron Transfer and Transport
 - 3.2 Proton-translocating Electron Transport Chain
 - 3.3 Proton-translocating ATPase Complex
4. Concepts of Membrane and Solute Transport
 - 4.1 Passive Diffusion
 - 4.2 Facilitated Diffusion
 - 4.3 Active Transport
 - 4.4 Group Translocation
5. Concepts of Energy Metabolism
 - 5.1 Photosynthesis
 - 5.2 Aerobic Respiration
 - 5.3 Anaerobic Respiration
 - 5.4 Fermentation
6. Concept of Enzyme Catalysis

Basic Strategies of Cell Metabolism

178

Horst Werner Doelle, *MIRCEN-Biotechnology Brisbane and Pacific Regional Network, Brisbane, Australia*

1. Introduction
2. Polymer hydrolysis
 - 2.1 Starch hydrolysis to glucose
 - 2.2 Cellulose
 - 2.3 Proteins
 - 2.4 Fats
3. Aerobic catabolism
 - 3.1 Carbohydrates
 - 3.2 Amino Acids
 - 3.3 Fatty Acids
 - 3.4 Hydrocarbon
 - 3.5 Single Carbon Compounds
4. Anaerobic catabolism
 - 4.1 Carbohydrates
 - 4.1.1 Ethanol formation
 - 4.1.2 Acetate, Butyrate, Acetone and butanol formation
 - 4.1.3 Organic acid formation

- 4.1.3.1 Propionic and succinic acid formation
- 4.1.3.2 Malo-lactic fermentation
- 4.1.3.3 Diacetyl, acetoin and butanediol formation
- 4.2 Proteins and amino acids
 - 4.2.1 Single Amino Acids
 - 4.2.2 Pairs of amino acids
 - 4.2.3 Single amino acids in combination with keto acids
- 4.3 Fatty acids
- 4.4 Methane formation
- 5. Anabolism (biosynthesis) of cellular components
 - 5.1 Autotrophic carbon assimilation
 - 5.2 Protein biosynthesis
 - 5.3 Ribonucleic acid [RNA] and Deoxyribonucleic acid [DNA]
 - 5.4 Lipid formation
 - 5.5 Cell Wall Formation
- 6. Metabolic Regulation
 - 6.1 Enzyme Activity Regulation
 - 6.1.1 Substrate availability
 - 6.1.2 Cofactor availability
 - 6.1.3 Product removal and Feedback inhibition
 - 6.2 Enzyme Synthesis Regulation
 - 6.2.1 Repression of enzyme synthesis
 - 6.2.2 Induction of enzyme synthesis
 - 6.2.3 Constitutive enzymes
 - 6.2.4 Catabolite repression

The Importance of Microbial Culture Collections and Gene Banks in Biotechnology 227

Lourdes M. Mahilum-Tapay, *Philippine National Collection of Microorganisms, National Institute of Molecular Biology and Biotechnology, University of the Philippines, Philippines.*

- 1. Introduction
- 2. Microbial Resources
 - 2.1 Establishment of Culture Collections
 - 2.2 Kinds of Culture Collections
 - 2.3 Current Status of Culture Collections in the World
- 3. Plant Genetic Resources
- 4. Culture Collections, Gene Banks and Biotechnology
 - 4.1 Repository of Strains and/or Genetic Materials
 - 4.2 Provider of Materials/Information and Services
 - 4.3 Patent Depository
 - 4.4 Information Center
- 5. Future Programs

Biosafety in Biotechnology 239

Jean-Marc Collard, *Institute of Public Health, Belgium*

Didier Breyer, *Institute of Public Health, Belgium*

Suzy Renckens, *Institute of Public Health, Belgium*

Myriam Sneyers, *Institute of Public Health, Belgium*

Ellen Van Haver, *Institute of Public Health, Belgium*

Bernadette Van Vaerenbergh, *Institute of Public Health, Belgium*

William Moens, *Institute of Public Health, Belgium*

- 1. Introduction
- 2. General Principles of Risk Assessment
 - 2.1 Classification of Natural Organisms on the Basis of Hazard
 - 2.2 Assessing the potential risks of genetically modified organisms

3. Contained Use
4. Deliberate Release of Transgenic Plants: Testing in the Environment and Placing on the (World) Market
5. Food and Feed as, or Derived from, Transgenic Crops
 - 5.1 Safety Assessment of GM food for Humans
 - 5.2 Safety Assessment of GM Feed for Animals
 - 5.3 Novel Food/Feed Acceptance
6. Medicinal Products
7. Framing Biosafety in An International Context
8. Conclusions

Bioinformatics**261**

Bojana Boh, *Faculty of Natural Sciences and Engineering, International Centre for Chemical Studies, University of Ljubljana, Slovenia*

1. Introduction
2. Levels of information processing
3. Traditional information support in biosciences: bibliographic databases
4. Value added processing of databases
5. Factual databases in biosciences
6. Nucleic Acid Research and Genomics
7. Protein Research and Proteomics
8. Higher levels of information processing

Microbial Chemistry**288**

Horst W. Doelle and Monica Wilkinson, *MIRCEN-Biotechnology Brisbane and Pacific Regional Network, Brisbane, Australia*

1. Introduction
2. General Consideration
3. Metabolism
 - 3.1. Thermodynamics
 - 3.2. Aerobic Metabolism
 - 3.3. Anaerobic Metabolism
 - 3.4. Anabolism (biosynthesis) of cellular components
 - 3.5. Metabolic Regulation
4. Microbial Chemistry in Nature
 - 4.1. Carbon
 - 4.2. Nitrogen
 - 4.2.1. Nitrogen Fixation
 - 4.2.2. Symbiotic Nitrogen Fixation
 - 4.2.3. Ammonification
 - 4.2.4. Nitrification
 - 4.2.5. Denitrification
 - 4.3. Sulfur Cycle
 - 4.3.1. Oxidative Sulfur Transformation
 - 4.3.2. Reductive Sulfur Transformation
 - 4.4. Phosphorous Cycle
 - 4.5. Iron Cycle
5. Microbial Interactions
 - 5.1. Interactions Amongst Microorganisms
 - 5.1.1. *Synergism*
 - 5.1.2. *Mutualism* or *symbiosis*
 - 5.2. Microorganism-Plant Interactions
 - 5.2.1. Beneficial Interactions. Symbiotic Nitrogen Fixation
 - 5.2.2. Rhizosphere
 - 5.2.3. Mycorrhiza

- 5.2.4. Detrimental Interactions
- 5.3. Microorganism - Animal Interactions
- 6. Human and Microbial Chemistry
- 7. Biotechnology Applications

A Concise History of Biotechnology - Some Key Determinants

321

John E. Smith, *Institute of Pharmacy and Biomedical Sciences, University of Strathclyde, Glasgow, Scotland*

1. Introduction
 - 1.1. Biotechnology - What's in a Name?
 - 1.2. Biotechnology - A Three Component Central Core
2. Biotechnology of Traditional Fermented Foods and Beverages
 - 2.1. Food Fermentations
 - 2.1.1. People and Environment
 - 2.1.2. Substrate
 - 2.1.3. Microorganisms
 - 2.1.4. Cultured Dairy Products
 - 2.2. Beverage Fermentations
3. Biotechnological Production of Biomass, Organic Acids, Solvents and Waste Treatment Processes under Non-Sterile Conditions
 - 3.1. Biomass Inocula
 - 3.2. Organic acids
 - 3.3. Waste Treatments and Water Purification
4. Biotechnological Processes Produced Under Conditions of Sterility
 - 4.1. Introduction
 - 4.2. The Penicillin Story
 - 4.3. Microbial Enzyme Production
 - 4.4. The Bioreactor
5. Downstream Processing
6. Applied Genetics and Genetic Engineering – Their Influence on Biotechnology
 - 6.1. Improvement of Industrial Microorganisms
 - 6.2. The Impact of Genetic Engineering on Biotechnology
 - 6.2.1. Cutting and Forming DNA Molecules
 - 6.2.2. Joining DNA Molecules
 - 6.3. Polymerase Chain Reactions (PCR)
 - 6.4. Genomic Library
 - 6.5. Gene Cloning in Plant Cells
 - 6.6. Gene Cloning in Animal Cells
 - 6.7. Monoclonal Antibodies
 - 6.8. The Potential Biohazards of Biotechnology – the Asilomar Conferences
7. Public Perceptions of Biotechnology
 - 7.1. What are the Main Areas of GM Technology that Appear to Create the Greatest Level of Public Concern?
 - 7.1.1. Antibiotic-Resistance Genes
 - 7.1.2. Transfer of Allergens
 - 7.1.3. Release of Genetically-Manipulated Organisms into the Environment
 - 7.1.4. Safety of Genetical Engineered Foods
 - 7.1.5. Applications of Human Genetic Research
8. Conclusions

VOLUME II

Methods in Biotechnology

1

David Alexander Mitchell, *Departamento de Bioquímica e Biologia Molecular, Universidade Federal do Parana, Brazil*

Adriana Contin, *Departamento de Farmácia, Universidade Federal do Parana, Brazil*

1. Methods in biotechnology: A topic in its own right
2. What is a method?
3. When methods are used in biotechnology
 - 3.1 Use of Methods during Operation of a Fermentation Process
 - 3.1.1 Methods used during the Upstream Processing Steps
 - 3.1.2 Methods used during the Fermentation Step Itself
 - 3.1.3 Methods used in Downstream Processing and Waste Disposal
 - 3.2 Use of Methods during Development of a New Fermentation Process
4. Identifying the need for a method, finding, choosing, using and reporting methods in biotechnology
 - 4.1 Identifying the need for a Method
 - 4.2 Finding Methods
 - 4.3 Selecting Methods, Modifying Methods and Developing New Methods
 - 4.4 Using Methods
 - 4.5 Reporting Methods in Biotechnology for Use by Others
5. Methods in biotechnology – current state and future prospects

Instrumentation and Control of Bioprocesses

23

Ricardo Perez-Correa, *Department of Chemical and Bioprocess Engineering, Pontificia Universidad Católica de Chile, Santiago, Chile*

Eduardo E. Agosin Trumper, *Universidad Catolica de Chile, Chile*

1. Introduction
2. Common Instruments for Process Automation
 - 2.1 Temperature
 - 2.2 Gas Flowrate
 - 2.3 Liquid Flowrate
 - 2.4 Off-Gas Analysis
 - 2.5 pH
 - 2.6 Dissolved Oxygen
 - 2.7 Pressure
 - 2.8 Foam
 - 2.9 Level
 - 2.10 Stirring
 - 2.11 Redox Potential
3. Advanced Instrumentation for Bioprocess Control and Automation
 - 3.1 Flow Injection Analysis
 - 3.2 Sequential Injection Analysis
 - 3.3 Fluorescence
 - 3.4 Mass Spectrometry
 - 3.5 Near Infrared Spectroscopy
 - 3.6 Softsensors
 - 3.7 Biomass
 - 3.8 Biosensors
4. Bioreactor Automation
 - 4.1 Control Strategies
 - 4.2 Control Algorithms

Chemical Methods Applied to Biotechnology**41**Nadia Krieger, *Federal University of Parana, Brazil*Luiz Pereira Ramos, *Federal University of Parana, UFPR, Brazil*Jose Domingos Fontana, *Federal University of Parana, UFPR, Brazil*

1. Introduction
2. Methods for Protein Determination
 - 2.1 Determination of Protein Mass and Structure
 - 2.1.1 Electrophoretic Methods
 - 2.2 Determination of Protein Sequences
3. Methods for the Determination of Carbohydrates
 - 3.1 Polysaccharides
 - 3.2 Starch
4. Methods for Determination of Lipids
 - 4.1 Determination of the Iodine Number
 - 4.2 Determination of the Saponification Number
 - 4.3 Titrimetric and Colorimetric Determination of Free Fatty Acids
5. Methods for Determination of Other Cell Components
 - 5.1 DNA
 - 5.2 ATP
6. Analysis of Other Low Molecular Weight Molecules
 - 6.1 Antibiotics and other Biologically Active Metabolites
 - 6.2 Citric Acid and other Organic Compounds
7. Conclusions

Physical Methods Applied to Biotechnology**71**Jose Domingos Fontana, *Departments of Pharmacy and Biochemistry/Molecular Biology, Federal University of Parana, UFPR, Curitiba, Parana, Brazil*Nadia Krieger, Luiz Pereira Ramos, *Department of Chemistry, Federal University of Parana, UFPR, Curitiba, Parana, Brazil*

1. Introduction
2. The Characterization of Potential Feedstocks in Sugar Cane
3. Physical Methods used for the Characterization of Lignocellulosic Materials
 - 3.1 Light-absorption Spectroscopy
 - 3.2 Chromatography
 - 3.3 Capillary Electrophoresis (CE)
 - 3.4 Nuclear Magnetic Resonance (NMR)
4. Bioprocesses Based on Sucrose Consumption such as in Sugar Cane Juice
5. Bioprocesses Based on Lignocellulosics such as Sugar Cane Bagasse
6. Final Considerations

Mathematical Modeling in Biotechnology**102**Joan Mata-Alvarez, *Department of Chemical Engineering, University of Barcelona*David Alexander Mitchell, *Departamento de Bioquímica e Biologia Molecular, Universidade Federal do Parana, Brazil*

1. What Can Mathematical Models Do for Biotechnological Processes?
2. Overview and General Principles of Mathematical Modeling Biotechnological Processes
 - 2.1 Elements of a Mathematical Model
 - 2.2 Case Study 1: Illustrating Development of a Mathematical Model
3. Types of Models
 - 3.1 Empirical Models versus Mechanistic Models
 - 3.2 Distributed Models versus Lumped Models
 - 3.3 Structured Models versus Unstructured Models
 - 3.4 Segregated versus Unsegregated Models

- 3.5 Deterministic versus Stochastic Models
- 3.6 Dynamic versus Non-dynamic Models
- 3.7 Linear versus Non-linear Models
- 3.8 Summary of Model Types
- 4. Steps in the modeling process
 - 4.1 Knowing what you Want to Achieve and why Modeling will help you to Achieve it
 - 4.2 Expressing Qualitatively your Understanding of the System
 - 4.3 Constructing a System of Equations
 - 4.4 Estimating the Parameters and Deciding on Appropriate Values for Operating Variables
 - 4.5 Solution of the Model
 - 4.6 Validating the Model against Experimental Results and Analyzing its Sensitivity to Parameters and Operating Conditions
 - 4.7 Using the Model as a Tool
- 5. Case Study 2: Mathematical Model of a Differential Reactor for Estimating Kinetic Constants
 - 5.1 Introduction
 - 5.1.1 The Experimental Device
 - 5.1.2 The Mathematical Model of the System
 - 5.1.3 Kinetic Model Assumptions: Zero Order Model (Activity Determinations)
 - 5.1.4 First Order Kinetic Model
 - 5.1.5 Resolution of the Model
 - 5.1.6 Michaelis-Menten Kinetic Model
 - 5.2 Spreadsheet Resolution of the Mathematical Model
 - 5.2.1 Constant Fitting with the Spreadsheet
 - 5.2.2 Diffusional Limitations: Enlarging the Model
- 6. Case Study 3: A Metabolic Structured Model for Glucose-Limited Growth of a Single Cell of *Escherichia coli*
- 7. State of The Art and Future Prospects

Biosensors

140

Enrique Galindo, *Institute of Biotechnology, National University of Mexico, Cuernavaca, Mexico*

- 1. Introduction
- 2. Transducers
 - 2.1 ElectroChemical
 - 2.2 Optical
 - 2.3 Thermal
 - 2.4 Piezoelectric
- 3. Biological elements
- 4. Construction of biosensors
- 5. General working principles
- 6. Response characteristics
 - 6.1 Response time
 - 6.2 Range of measurement
 - 6.3 Reproducibility
 - 6.4 Interferences
 - 6.5 Operational stability and shelf life
- 7. Examples of biosensors
 - 7.1 Enzyme electrodes
 - 7.2 Immunoelectrodes
 - 7.3 Microbial electrodes
 - 7.3.1 BOD sensor
 - 7.3.2 Penicillin biosensor
 - 7.4 Tissue-based biosensors
 - 7.5 DNA biosensors
 - 7.6 Receptor biosensors
- 8. Scientific and technological status
- 9. Future trends and perspectives

- 9.1 Automatic control
- 9.2 Protein engineering

Molecular Biotechnology: Applications in Livestock System **168**

Ala E. Lew-Tabor, *Emerging Technologies, Queensland Primary Industries and Fisheries, QLD; And Centre for Comparative Genomics, Murdoch University, WA, Australia.*

- 1. Introduction
- 2. Molecular Biotechnology Approaches Applied to Livestock Systems
 - 2.1 Genetics and breeding
 - 2.1.1 Reproductive technologies
 - 2.1.2 Molecular approaches to breeding
 - 2.2 Molecular diagnostics and animal health
 - 2.2.1 Improved immunoassays/Immunosensors
 - 2.2.2 Nucleic acid (DNA or RNA based) diagnostics
 - 2.3 Animal vaccines
 - 2.3.1 Vaccine types
 - 2.3.2 Vaccine delivery
- 3. Future Trends
- 4. Conclusions

Index **183**

About EOLSS **189**

VOLUME III

Methods in Gene Engineering **1**

Chanan Angsuthanasombat, *Laboratory of Molecular Biophysics and Structural Biochemistry, Institute of Molecular Biology and Genetics, Mahidol University, Salaya Campus, Nakornpathom, 73170 Thailand*

- 1. Introduction
- 2. Gene Engineering with Polymerase Chain Reaction
 - 2.1 Principles and Limitations of PCR
 - 2.2 Applications of PCR
 - 2.2.1 Gene Fusion via Splicing by Overlap Extension
 - 2.2.2 *In Vitro* Mutagenesis via Amplification of Entire Plasmid
 - 2.2.3 Dideoxy-Based Directed DNA Sequencing
- 3. Gene Expression Strategies
 - 3.1 High-Level of Protein Expression in *Escherichia coli*
 - 3.2 Expression of Cloned Genes as Fusion Proteins
 - 3.3 Detection of Expressed Gene Products

Genetic Manipulation of Bacteria **16**

Christopher Morton Thomas, *School of Biosciences, University of Birmingham, Edgbaston, Birmingham UK.*

- 1. Introduction
- 2. Genetic manipulation in bacteria
 - 2.1 Vectors
 - 2.1.1 Plasmid vectors
 - 2.1.2 Phage vectors

- 2.2 *In vitro* recombination
- 3. Introduction of DNA into bacteria
- 4. Library screening
- 5. Polymerase chain reaction (PCR)
- 6. Expression and protein purification
- 7. Site directed mutagenesis
- 8. Genetic manipulation of bacteria
 - 8.1 Cloning specific genes
 - 8.2 DNA shuffling
- 9. Examples of genetic manipulation
 - 9.1 Producing antibodies in bacteria
 - 9.2 Manipulation of bacterial metabolism
 - 9.3 Manipulation of biodegradative capacity
 - 9.4 Bacteria as biosensors
 - 9.5 Manipulation of antibiotic biosynthesis
- 10. Biosafety

Genetic Engineering of Fungal Cells

36

Margo M. Moore, *Department of Biological Sciences, Simon Fraser University, Burnaby, Canada*

- 1. Introduction
 - 1.1. Industrial importance of fungi
 - 1.2. Purpose and range of topics covered
- 2. Generation of transforming constructs
 - 2.1. Autonomously-replicating plasmids
 - 2.2. Promoters
 - 2.2.1. Constitutive promoters
 - 2.2.2. Inducible promoters
 - 2.3. Selectable markers
 - 2.3.1. Dominant selectable markers
 - 2.3.2. Auxotrophic/inducible markers
 - 2.4. Gateway technology
 - 2.5. Fusion PCR and Ligation PCR
- 3. Transformation methods
 - 3.1. Protoplast formation and CaCl₂/ PEG
 - 3.2. Electroporation
 - 3.3. *Agrobacterium*-mediated Ti plasmid
 - 3.4. Biolistics
 - 3.5. Homo- versus heterokaryotic selection
- 4. Gene disruption and gene replacement
 - 4.1. Targeted gene disruption
 - 4.1.1. Ectopic and homologous recombination
 - 4.1.2. Strains deficient in non-homologous end joining (NHEJ)
 - 4.1.3. AMT and homologous recombination
 - 4.1.4. RNA interference
 - 4.2. Random gene disruption
 - 4.2.1. Restriction enzyme-mediated integration (REMI)
 - 4.2.2. T-DNA tagging using AMT
 - 4.2.3. Transposon mutagenesis & TAGKO
- 5. Concluding statement

Genetic Engineering of Algal Species

67

Ann-Sofi Rehnstam-Holm, *Section for Aquatic Biology and Chemistry, Kristianstad University, Kristianstad, Sweden*

Anna Godhe, *Dept. Marine Ecology, University of Gothenburg, Goteborg, Sweden*

- 1. Introduction

- 1.1 What are Algae?
- 1.2 What is Genetic Engineering?
- 1.3 The Importance of Algae
2. Classification of Algae
3. Principles of Microalga Culture
4. Gene Technology
 - 4.1 Polymerase Chain Reaction
 - 4.2 Cloning
 - 4.3 Hybridization
5. Genetical Identification and Phylogeny
 - 5.1 Origin of Chloroplasts
 - 5.2 Use of Conserved Genes
 - 5.3 Molecular Identification of Algae
 - 5.4 Molecular Identification of Algal Populations
6. Genetic Engineering as a Tool to understand the Physiology, Biochemistry and Molecular Biology of Algae
 - 6.1 Model Organisms
 - 6.1.1 *Chlamydomonas reinhardtii*—The "Green Yeast"
 - 6.1.2 Cyanobacteria
 - 6.2 Genetic Studies of Photosynthesis
 - 6.3 Genetic Studies of Photoprotection
 - 6.4 Genetic Studies on the Function of Flagellae
 - 6.5 Genetic Studies on Transport of Proteins into Plastids
 - 6.6 Markers used for Growth Studies
 - 6.7 Processes Regulated by the Circadian Clock
7. Genetic Engineering of Algae: Examples of Environmental and Industrial Applications
 - 7.1 Cyanophyceae as N-fertilizers and Bioremediators
 - 7.2 Commercially Attractive Compounds from Algae
 - 7.3 Cultivation of Marine Macro Algae

Genetic Engineering of Plants

94

Jennifer Ann Thomson, *Department of Microbiology, University of Cape Town, South Africa*

1. Introduction
2. Transformation of dicotyledonous plants
 - 2.1 Transformation using *Agrobacterium tumefaciens*
 - 2.1.1 The role of *A. tumefaciens* chromosomally encoded proteins and the Vir proteins
 - 2.2 Other transformation methods
3. Transformation of monocotyledonous plants
 - 3.1 Biolistic transformation
 - 3.1.1 Gene silencing
 - 3.2 *Agrobacterium* transformation
4. Transformation of algae
5. Promoter efficiency and tissue specificity
6. Targeting genes to organelles
7. Integration and stability of transgenes

Genetic Engineering of Mammalian Cells

110

Hugo H. Montaldo, *Departamento de Genética y Bioestadística. Facultad de Medicina Veterinaria y Zootecnia, Universidad Nacional Autónoma de México.*

1. Introduction
2. Expression and Regulation of Eukaryotic Genes
3. Recombinant DNA Technology
 - 3.1 Restriction Enzymes
 - 3.2 DNA Vectors

- 3.3 DNA Libraries
- 4. Genetic Maps\
 - 4.1 Genetic Linkage Maps
 - 4.2 Physical Maps
 - 4.2.1 Chromosomal Map
 - 4.2.2 cDNA Map
 - 4.3 Sequencing Technologies and the Human Genome Project
 - 4.4 Gene Function and Expression in Mammals
- 5. Use of Genomic Information in Animal Improvement
- 6. Cloning Adult Mammals
 - 6.1 Cloning Methods
 - 6.2 Problems
 - 6.3 Use of Cloning in Animal Breeding
- 7. Transgenic Animals
 - 7.1 Transgenic Methods
 - 7.2 Transgenesis in the Improvement of Production Traits
 - 7.2.1 Growth and meat traits
 - 7.2.2 Milk Composition
 - 7.3 Animal Models for Human Diseases
 - 7.4 Synthesis of Biomedical Products (Bioreactors)
 - 7.5 Commercial Transgenic Products
 - 7.6 Organs for transplant
 - 7.7 Future Perspectives of transgenesis
- 8. Gene Therapy
- 9. Ethical and Social Issues
- 10. Conclusions

Protein Engineering**140**

D. N. Rubingh and R. A. Grayling, *Corporate Research Division, The Procter and Gamble Company, USA*

- 1. Introduction
- 2. Strategies for Protein Engineering
 - 2.1 Rational Methods
 - 2.1.1 Rational Design
 - 2.1.2 De Novo Protein Design
 - 2.2 Directed Evolution
 - 2.2.1 Introduction and Background
 - 2.2.2 DNA Shuffling
 - 2.2.3 Screening and Selection
- 3. Commercial Applications of Protein Engineering
 - 3.1 The Cleaning Products Industry
 - 3.2 The Starch Processing Industry
 - 3.3 Other Enzymes
 - 3.4 Other Proteins
- 4. Future Possibilities
 - 4.1 Economics and Production
 - 4.2 Future Directions
 - 4.2.1 Bioremediation
 - 4.2.2 Chemical Processing
 - 4.2.3 Pharmaceuticals
 - 4.3 Emerging Technologies
 - 4.4 Perspectives on Directed Evolution and Biodiversity
- 5. Conclusions

Health and Gene Sciences**166**Yongyuth Yuthavong, *National Science & Technology Development Agency, Thailand*

1. Introduction
2. Relevance of genomes to human health
3. Diagnosis
4. Drugs and Vaccines: pharmacogenomics
5. Gene Therapy
6. Conclusion

GMO-Technology and Malnutrition – Public Sector Responsibility and Failure**176**Ingo Potrykus, *Plant Sciences, Swiss Federal Institute of Technology (ETH) and Chairman of the Humanitarian Golden Rice Board & Network, Switzerland*

1. Micronutrient malnutrition
2. Cost-effective and sustained production of nutritious food
3. Why do we have GMO regulations?
4. Traditional breeding
5. The paradox of GMO regulation
 - 5.1 What is the 'status quo' of GMO regulation?
 - 5.2 What are the consequences of the 'status quo'?
 - 5.3 What does the author consider 'rational regulation'?
6. Is GMO over-regulation costing lives?

New opportunities revealed by biotechnological Exploration of Extremophiles**187**Mircea Podar, *Department of Biology, Portland State University, Portland, OR 97201, USA*
Anna-Louise Reysenbach, *Portland State University, USA*

1. Introduction
2. Extremophiles and biomolecules
3. Extremophile genomics exposing the biotechnological potential
4. Tapping into the hidden biotechnological potential through metagenomics
5. Unexplored frontiers and future prospects

The Challenges of Genetic Information**198**Trudo Lemmens and Lisa Austin, *Faculty of Law, University of Toronto, Toronto, Canada*

1. Introduction
2. What is Genetic Information?
 - 2.1 DNA Testing
 - 2.2 Indirect Genetic Testing
 - 2.3 Family History
 - 2.4 Differentiation of Genetic Testing According to its Health Care Purpose and its Timing
 - 2.5 Identification Purposes: Forensic DNA and Military DNA banks
 - 2.6 Genetic Information Distinguished According to the Way it is Stored
 - 2.7 Which Definition?
3. Characteristics of Genetic Information: The Claim of Genetic Exceptionalism
 - 3.1 Genetic Prophecy
 - 3.2 Lack of Control Over One's Genome
 - 3.3 Family and Ethnic Community
4. How Genetics Highlights Existing Problems
 - 4.1 Family and Disclosure of Risk Information
 - 4.2 Information, Longevity and Identification
 - 4.3 Uses of Genetic Information
5. Conclusions

Principles of Metabolic Engineering 226
 John Villadsen, *Department of Chemical and Biochemical Engineering, Technical University of Denmark*

1. Introduction
2. The Tools of Metabolic Engineering
 - 2.1. Metabolic balancing and Metabolic Flux Analysis (MFA)
 - 2.2. Metabolic Control Analysis (MCA) and the flux control coefficients C_i^j
 - 2.3. Fast dynamics of cells and the use of approximate kinetics in MCA
 - 2.4. The lack of experimental rate measurements, and metabolite labeling
3. Metabolic Engineering in practice.
 - 3.1. The role of Metabolic Engineering in the bio-fuels industry
 - 3.2. The spectrum of processes to be advanced by Metabolic Engineering

Index 257

VOLUME IV

Bioprocess Engineering - Bioprocess Analysis through Calorimetry and Biothermodynamics 1
 Thomas Maskow, *Department of Environmental Microbiology (UMB), UFZ Helmholtz Centre for Environmental Research, Permoserstr. 15, D-04318 Leipzig, Germany*
 Richard B. Kemp, *Institute of Biological Sciences, Edward Llwyd Building, University of Wales, Aberystwyth SY23 3DA, U.K.*

1. Introduction
2. Roots of Modern Biocalorimetry
3. Information Content of Calorimetric Signals
 - 3.1 Stoichiometry and kinetics of microbial growth and product formation
 - 3.2 Analysis of the Metabolic Carbon Fluxes
4. Localization of Calorimetric Sensors
 - 4.1 Calorimeter embracing natural or technical systems
 - 4.2 Sensors inside natural or technical systems
 - 4.3 Sensors in measuring loops
5. Recent Developments of Calorimetry
 - 5.1 Megacalorimetry
 - 5.2 Miniaturized calorimetry
 - 5.3 High-throughput calorimetry
 - 5.4 Ultra-sensitive calorimetry
 - 5.5 Photocalorimetry
6. Future Prospect of Biocalorimetry

Bioreactors 28
 Marin Berovic, *Department of Chemical, Biochemical & Environmental Engineering, University of Ljubljana, Slovenia*

1. Introduction
2. Bioreactors with Mechanically Moved Internal Part
 - 2.1. Stirred Tank Reactors
3. Bioreactors with a Circulation Pump
 - 3.1. Deep Jet Reactor
4. Bioreactors Mixed by Compressed Gas Sparging
 - 4.1. Bubble Columns
 - 4.2. Bubble Columns with Internals to Redisperse the Gas

- 4.3. Air-lift and external bubble-column loop reactor
- 5. The Large-Scale Pneumatic Bioreactors
- 6. Bioreactors for Wastewater Treatment
 - 6.1. Activated Sludge Process
 - 6.2. Biofilm Systems
 - 6.3. Fluidized Bed Biofilm Bioreactor
 - 6.4. Anaerobic Reactors
- 7. Fine Products Bioreactors
 - 7.1. Fluidized Bed Reactor (FBR)
 - 7.2. Perfusion Airlift Reactor (PALR)
 - 7.3. Membrane Bioreactors
 - 7.4. Hollow Fibre Membrane Reactor (HFMR)
 - 7.5. Ultrabioreactors
- 8. Photobioreactors
 - 8.1. Pond Cultures
 - 8.2. Deep Channelled Cultures (DCC)
 - 8.3. The Shallow Circulating Systems
 - 8.4. Helicoidal Photobioreactor

Upstream Processing - Sterilization in Bioprocess Technology

80

Marin Berovic, *Department of Chemical, Biochemical & Environmental Engineering, University of Ljubljana, Slovenia*

- 1. Introduction
- 2. Sterilization of Gases
 - 2.1 Absolute Filters
 - 2.2 Fibrous Filters
 - 2.3 Sterilization of Gas Filters
 - 2.4 Sizing of the Fibrous Filter
 - 2.5 Filter Cartridges
 - 2.6 Ceramic Filters
 - 2.7 Stainless Steel Filters
 - 2.8 Membrane Filters
 - 2.9 Membrane Cartridge Filter for Air Sterilization
- 3. Sterilization of Liquids
 - 3.1 Sterilization of Liquids by Filtration
 - 3.2 Sterilization by Heat
 - 3.2.1 Sterilization in the Instantaneous Heater
 - 3.3 Heat Sterilization of Liquids
 - 3.3.1 Batch Sterilization Principle
 - 3.3.2 Continuous Sterilization Principle
- 4. Sterilization of Small Equipment
 - 4.1 Microbicidal Gases and Chemical Agents
 - 4.2 Ionizing Radiation
 - 4.3 Dry Heat Sterilization
- 5. Sterilization of Large Equipment
 - 5.1 Valves and Piping
 - 5.2 Elimination of Condensate
- 6. Validation of Sterilization
- 7. Conclusions

Downstream Processing of Proteins Using Foam Fractionation

103

Cesar C. Santana, *Department of Biotechnological Processes, State University of Campinas, Brazil*
Liping Du and Robert D. Tanner, *Department of Chemical Engineering, Vanderbilt University, USA*

- 1. Introduction

2. General Aspects of Foam Fractionation
3. Foam Fractionation of Proteins
 - 3.1 Single-Protein
 - 3.2 Multi-components of Proteins
4. Protein Adsorption at a Gas-liquid Interface
 - 4.1 Single Proteins
 - 4.2 Multi-Components of Proteins
5. Foam Models
 - 5.1 Description of Foam Column
 - 5.2 Theoretical Foam Models
6. Separation of Bovine Serum Albumin and Cytochrome c from Binary Mixtures Using Gas-Liquid Interface Adsorption

Process Optimization Strategies for Biotechnology Products: From Discovery to Production 131

M. J. Kennedy, S. L. Reader, D. Krouse, and S. Hinkley, *Biopharmaceuticals, Industrial Research Ltd, New Zealand*

1. Introduction
 - 1.1 Process Development
 - 1.2 Process Optimization
2. The Drug Discovery and Development Process
3. Optimization of Chemical Structure
 - 3.1 The Search for the Best Chemical Structure Starts with Discovery
 - 3.2 Fine Tuning the Chemical Structure
4. Optimization of the Microbe
 - 4.1 Bioprospecting
 - 4.1.1 Screening Methods
 - 4.1.1.1 Direct Visualization
 - 4.1.1.2 Challenge Organisms
 - 4.1.1.3 Higher Cell Culture Screens
 - 4.1.1.4 In vivo Screens
 - 4.1.1.5 Enzyme Assays
 - 4.1.1.6 High Throughput Screens
 - 4.1.1.7 Gene Probes
 - 4.2 Culture Purchase
 - 4.3 Enhancing Producer Strains
 - 4.3.1 Normal Distribution of Isolate Performance
 - 4.3.2 Anti-metabolite Selection
 - 4.3.3 Nutrient Source Deregulation
 - 4.3.4 Classic Mutagenesis
 - 4.3.5 The Use of Reporter Genes
 - 4.3.6 Targeted Genetic Manipulation
 - 4.3.7 Overexpression through Genetic Techniques
 - 4.3.8 Transfer of Production Genes between Microbes
5. Optimization of the Growth Medium
 - 5.1 Medium Design Processes
 - 5.1.1 Target Variable
 - 5.1.2 The Effect of Medium Design on Strain Selection and Development
 - 5.1.3 The Scalability of Shake Flask Results
 - 5.2 Two Different Types of Improvement Strategy: Open and Closed
 - 5.3 Improvement Strategies and Techniques
 - 5.3.1 Borrowing
 - 5.3.2 Component Swapping
 - 5.3.3 Biological Mimicry
 - 5.3.4 One at a Time
 - 5.3.5 Experimental Design
 - 5.3.6 Artificial Neural Networks

- 5.3.7 Fuzzy Logic
- 5.3.8 Genetic Algorithms
- 5.4 Summary of Strategies and Techniques
- 5.5 An Integrated Medium Design Process
- 6. Optimization of the Operating Environment using Process Control
 - 6.1 What to Control?
 - 6.2 How to Measure the Control Parameter
 - 6.3 How to Execute the Control Strategy

Microbial Dynamic Transformation: Basic Concepts**164**

J.M. Bruno-Bárcena, *Department of Microbiology & Biomanufacturing Training and Education Center (BTEC), North Carolina State University, North Carolina, USA*

E. Picó-Marco and J.L. Navarro, *DISA (Departamento de Ingeniería de Sistemas y Automática), Universidad Politécnica de Valencia, Valencia, España*

J. Picó, *Institute for Industrial Computing and Control Systems (AI2), Universidad Politécnica de Valencia, Valencia, España*

- 1. Introduction
- 2. Growth and Microbial Kinetics
- 3. System and Signals
 - 3.1 Mixture and Homogenization of Compounds
 - 3.2 Batch Fermentation
 - 3.3 Batch-fedbatch Fermentation
- 4. Dynamical Systems
- 5. Models
 - 5.1 Definition and Classification
 - 5.2 Steps of the Modeling and Identification Process
 - 5.2.1 Choice of a Model Structure
 - 5.2.2 Experimental Data Acquisition and their Conditioning
 - 5.2.3 Model Parameter Identification
 - 5.2.4 Validation
- 6. Application to Bioreaction Modeling
- 7. Models for the Reaction Rates
 - 7.1 Non-structured, Non-segregated Models
- 8. Modes of Operation in Fermentation
 - 8.1 Continuous
 - 8.2 Fedbatch
 - 8.3 General Diagram
- 9. Control
 - 9.1 Introduction, Monitorization, Supervision, and Control
 - 9.2 Feedback Control
- 10. Steps of a Control System Design: The Biotechnologist's Role

Biotransformations**197**

Hiltrud Lenke, *Chemgineering Business Design AG, Switzerland*

Andreas Schmid, *Technische Universitt Dortmund and ISAS Leibniz Institute of Analytical Sciences, Germany*

- 1. Introduction
- 2. Screening of Biocatalysts
 - 2.1 Classical Screening Approaches
 - 2.2 Screening by Considering Biodiversity
- 3. Biodegradative Pathways for Biotransformations
 - 3.1 Aromatic Compounds
 - 3.2 Aliphatic Compounds
 - 3.3 Heterocyclic Aromatic Compounds

- 3.4 Nitroaromatic Compounds
- 4. Biocatalyst Characterization and Design
- 5. Bioprocessing
 - 5.1 Biocatalyst Production
 - 5.2 Biotransformation Application
 - 5.2.1 Whole Cell Biotransformations
 - 5.2.2 Use of Isolated Enzymes
 - 5.3 Downstream Processing
- 6. Technical Applications of Biotransformations

Index **237**

About EOLSS **241**

VOLUME V

Industrial Biotechnology	1
Jose Manuel Bruno-Barcena, <i>Department of Microbiology and Bio-manufacturing Training & Education Center, NC State University, USA</i> Faustino A. Sineriz, <i>Institute of Microbiology, University of Tucumán, PROIMI, Argentina</i>	

- 1. Definition
- 2. History
- 3. The Best Biological Agent
 - 3.1 Microorganisms
 - 3.2 Recombinant Microorganisms
 - 3.3 Communities versus Pure Cultures
 - 3.4 Other Biocatalysts
- 4. The Best Possible Environment
 - 4.1 Selecting the Fermentation System
 - 4.2 Growth Rate and Production Rate
- 5. Separation and Purification
- 6. Pilot Plants
- 7. Good Manufacturing Practice (GMP)
- 8. Large Scale Fermentation
- 9. Biopesticide Production
- 10. Concluding Remarks

Enzyme Production	21
Rajni Hatti-Kaul, <i>Department of Biotechnology, Center for Chemistry & Chemical Engineering, Lund University, Lund, Sweden</i>	

- 1. Introduction
- 2. Enzyme source
- 3. Microbial strain selection
- 4. Strain development
 - 4.1 Mutation and selection
 - 4.2 Hybridization
 - 4.3 Recombinant DNA technology
 - 4.4 Engineering the enzyme
- 5. Growth requirements of microorganisms
- 6. Fermentation
 - 6.1 Submerged fermentation
 - 6.2 Solid state fermentation

7. Isolation and purification of enzymes
 - 7.1 Disruption of cells and tissues
 - 7.1.1 Disruption of microbial cells
 - 7.1.2 Homogenisation of animal/plant tissue
 - 7.2 Clarification of culture broths/homogenates
 - 7.2.1 Filtration
 - 7.2.2 Centrifugation
 - 7.2.3 Pretreatment of broth to facilitate clarification
 - 7.2.4 Flotation
 - 7.3 Concentration and initial fractionation
 - 7.3.1 Evaporation
 - 7.3.2 Ultrafiltration
 - 7.3.3 Precipitation
 - 7.3.4 Adsorption
 - 7.4 Integrated technologies for downstream processing
 - 7.4.1 Extraction in aqueous two-phase systems
 - 7.4.2 Expanded bed adsorption
 - 7.5 High resolution purification by chromatography
 - 7.5.1 Adsorption Chromatography
 - 7.5.1.1 Ion exchange chromatography
 - 7.5.1.2 Hydrophobic interaction chromatography
 - 7.5.1.3 Affinity chromatography
 - 7.5.2 Size-Exclusion Chromatography
 - 7.6 Crystallization for enzyme purification
8. Product formulation
9. Regulations during enzyme production

Production of Alcoholic Beverages

63

Nduka Okafor, *Nnamdi Azikiwe University, Nigeria*

1. Alcoholic Beverages from Cereals
 - 1.1 Introduction
 - 1.2 Barley Beers
 - 1.2.1 Bottom-fermented beers
 - 1.2.2 Top fermented beers
 - 1.2.3 Raw materials for brewing
 - 1.2.4 Brewery processes
 - 1.2.4.1 Malting
 - 1.2.4.2 Milling of malt
 - 1.2.4.3 Mashing
 - 1.2.4.4 Mash operations
 - 1.2.4.4.1 Decoction methods
 - 1.2.4.4.2 Infusion methods
 - 1.2.4.4.3 The double mash method (cooker method)
 - 1.2.4.5 Wort boiling treatment
 - 1.2.4.6 Fermentation
 - 1.2.4.7 Storage or lagerung
 - 1.2.4.8 Packaging
 - 1.3 Sorghum beers
 - 1.3.1 Malting
 - 1.3.2 Mashing
 - 1.3.3 Fermentation
 - 1.3.3.1 Burukutu and pito:
 - 1.3.3.2 Talla
 - 1.3.3.3 Merissa
 - 1.4 Maize and wheat beers
 - 1.4.1 Bouza

- 1.4.2 Busaa
- 1.4.3 Tesguino
- 1.5 Rice wines
- 2. Grape wines
 - 2.1 Processes in wine making
 - 2.1.1 Crushing of grapes
 - 2.1.2 Fermentation
 - 2.1.2.1 Control of fermentation
 - 2.1.2.2 Flavor development
 - 2.1.3 Ageing and storage
 - 2.1.4 Clarification
 - 2.1.5 Packaging
 - 2.1.6 Wine defects
 - 2.1.7 Wine preservation
 - 2.1.8 Classification of wines
- 3. Palm wines
 - 3.1 Obtaining the sap
 - 3.2 Composition of palm sap
 - 3.3 Microorganisms in palm wine
 - 3.4 Biochemistry of the Conversion of Palm Sap to Palm Wine
- 4. Alcoholic Beverages from miscellaneous substrates
 - 4.1 Honey Wines
 - 4.2 Wines from Bananas/plantains
 - 4.3 Wines from Plant and Fruit Juices
 - 4.3.1 Cactus fruit, *Opuntia* spp
 - 4.3.2 Sap of Agave
- 5. Spirit Beverages
 - 5.1 Measurement of the alcoholic strength of spirit beverages
 - 5.2 General principles in the production of spirit beverages
 - 5.3 Various spirit beverages

Production of Organic Acids

100

Fernando Sanchez-Riera, *Bio-Technical Resources, USA*

- 1. Introduction
- 2. Citric Acid
 - 2.1 Historical Development
 - 2.2 Fermentation Basics
 - 2.3 Fermentation Processes
 - 2.3.1 Production with *A. niger*
 - 2.3.2 Production with Yeasts
 - 2.4 Product Recovery
- 3. Lactic Acid
 - 3.1 Historical Development
 - 3.2 Fermentation Basics
 - 3.3 Fermentation Processes
 - 3.3.1 Raw Materials
 - 3.3.2 Process Parameters
 - 3.3.3 Process Configurations
 - 3.4 Product Recovery
- 4. Acetic Acid
 - 4.1 Overview
 - 4.2 Aerobic Production of Vinegar
 - 4.3 Process Configurations
 - 4.4 Anaerobic Production of Acetic Acid
- 5. Gluconic Acid
 - 5.1 Overview
 - 5.2 Production Process

6. Itaconic Acid
 - 6.1 Overview
 - 6.2 Production Process
7. Other Acids
 - 7.1 Propionic Acid
 - 7.2 Succinic Acid
 - 7.3 Pyruvic Acid
8. Conclusions

Production of Antibiotics

126

S. Gutiérrez, J. Casqueiro, and J. F. Martín, *Area of Microbiology, University of León, Spain*

1. Introduction
2. β -lactam Antibiotics as a Model System
3. Penicillin, Cephalosporin and Cephamycin Biosynthesis: An Overview
 - 3.1 Common Reactions to the Penicillins, Cephalosporins and Cephamycins Biosynthesis
 - 3.1.1 Formation of the ACV Tripeptide
 - 3.1.2 Cyclization of the ACV Tripeptide and Formation of the Isopenicillin N
 - 3.1.3 The Last Step in the Penicillin Biosynthesis: Conversion of Isopenicillin N into Penicillin G
 - 3.2 Specific Reactions for the Cephalosporin and Cephamycin Biosynthesis
 - 3.3 The Late Reactions in Cephamycin Biosynthesis
 - 3.4 Alternative Pathway for the Cephamycin C Biosynthesis
4. Regulation of Penicillin Biosynthesis
 - 4.1 Carbon Source Regulation of Penicillin Formation
 - 4.2 Nitrogen Source Regulation
 - 4.3 Regulation by Lysine
 - 4.4 Regulation by Glutamate and Glutamine
 - 4.5 Regulation by pH
5. Clustering of Genes for the Biosynthesis of β -lactam Antibiotics
6. Strain and Process Improvements
7. Application of the DNA Recombinant Technology to Increase the Antibiotic Production in Filamentous Fungi: Engineering of the β -lactam Antibiotic Pathways
 - 7.1 Increase of the Gene Copy Number
 - 7.1.1 Increase of the Gene Copy Number of the *pcbC* and *penDE* Genes of *Penicillium chrysogenum*
 - 7.1.2 Increase in the Copy Number of the *cefEF* Gene of *Acremonium chrysogenum*
 - 7.1.3 Increase of the *pcbC* Copies on *Penicillium chrysogenum* Industrial Strains
 - 7.2 Increasing the Expression of One or More Genes of the Pathway and Changing their Promoter Regions in Order to Elude the Usual Regulation of These Genes
 - 7.2.1 Over-expression of the *pcbAB* Gene of *Aspergillus nidulans* under the Promoter of the *alcA* Gene
 - 7.2.2 Overexpression of the Genes *IPNS* (*ipnA*) and *AAT* (*acyA*) in *A. nidulans* under the *alcA* Promoter (*alcAp*)
 - 7.2.3 Production of Penicillins in *Acremonium chrysogenum*
 - 7.3 Increasing the Efficiency of the Pathway by Overexpression of Genes that could Improve the Flux of Nutrients or Metabolites to the Pathway
 - 7.3.1 Intracellular Expression of the *Vitreoscilla* Hemoglobin
 - 7.3.2 Production of Cephalosporin Intermediates by Recombinant *P. chrysogenum* strains
 - 7.3.3 Increasing the Flux of Phenylacetic Acid to the Penicillin Biosynthesis by Disruption of the *phacA* Gene
 - 7.3.4 Increasing the Pool of a α -aminoadipic Acid by Disruption of the *lys2* Gene

Bioplastic and Biopolymer Production

152

Ian W. Sutherland, *Institute of Cell and Molecular Biology, University of Edinburgh, Edinburgh, United Kingdom*

1. Bioplastics
 - 1.1 Introduction
 - 1.2 Occurrence & Composition
 - 1.3 Biosynthesis
 - 1.4 Products
 - 1.5 Production and recovery
2. Biopolymers (Polysaccharides)
 - 2.1 Introduction
 - 2.2 Occurrence and Composition
 - 2.3 Polysaccharide biosynthesis
 - 2.3.1 Biosynthetic mechanisms
 - 2.3.2 Genetics and regulation of exopolysaccharides synthesis
 - 2.4 Commercial products
 - 2.4.1 β -D-Glucans
 - 2.4.2 α -D-Glucans
 - 2.4.3 Bacterial Alginates
 - 2.4.4 Gellan and Related Polymers
 - 2.4.5 Hyaluronic Acid and Heparin
 - 2.4.6 Succinoglycan and galactoglucans
 - 2.4.7 Xanthan
 - 2.5 Production of exopolysaccharides
3. Future Developments
 - 3.1 Bioplastics
 - 3.2 Biopolymers

Production of Biosurfactants

176

Faustino A. Sineriz, *Institute of Microbiology, University of Tucumán, PROIMI, Argentina*

Rolf K. Hommel, *CellTechnologie Leipzig, Germany*

Hans-Peter Kleber, *Institute of Biochemistry, University of Leipzig, Germany*

1. Introduction
2. Evaluation
3. Structural Types and Producers
4. Biosynthesis and Regulation
 - 4.1 Rhamnolipids
 - 4.2 Surfactin
 - 4.3 Other Biosurfactants
5. Genetics
6. Production
 - 6.1 Screening of Producers
 - 6.2 Factors affecting production
 - 6.2.1 Generic Factors
 - 6.2.2 Precursors
 - 6.3 Batch Cultivation
 - 6.3.1 Glycolipids
 - 6.3.2 Lipopeptides and Lipoproteins
 - 6.3.3 Polymeric Surfactants
 - 6.4 Semicontinuous Cultivation
 - 6.5 Continuous Cultivation
 - 6.6 Processing, Purification, Economy
 - 6.7 Chemical Synthesis and Modifications
7. Properties
 - 7.1 Biophysical Properties
 - 7.2 Biological Activities
8. Potential Applications
 - 8.1 Environmental Control
 - 8.2 Food

- 8.3 Cosmetics
- 8.4 Medicine and Plant Protection
- 9. Concluding Remarks

Industrial Recombinant Protein Production **203**

Laura A. Palomares, *Department of Bioengineering, Biotechnology Institute, National Autonomous University of Mexico, Mexico.*

Francisco Kuri-Brena, *Probiomed S.A. de C.V., México*

Octavio T. Ramirez, *Department of Bioengineering, Biotechnology Institute, National Autonomous University of Mexico, Mexico.*

- 1. Introduction
- 2. Markets and Products
- 3. The first step: Selection of an expression system
 - 3.1 The importance of the vector and the promoter
 - 3.2 The importance of the host
 - 3.2.1 Prokaryotes
 - 3.2.2 Yeast
 - 3.2.3 Filamentous fungi
 - 3.2.4 Animal cells
 - 3.2.5 Transgenic animals or plants
- 4. Bioprocess engineering considerations
 - 4.1 Bioreactor design and operation
 - 4.2 Operational strategies for recombinant protein production
 - 4.2.1 Plasmid instability and copy number
 - 4.2.2 Induction strategies
 - 4.2.3 Production conditions
 - 4.2.3.1 Special considerations for animal cells
 - 4.3 Downstream Processing Considerations
- 5. Biosafety and Regulations
 - 5.1 Containment regulations
- 6. Facility Design
 - 6.1 Validation of facilities
- 7. Product Characterization

Index **245**

About EOLSS **255**

VOLUME VI

Biopesticide Production **1**

Nasrine Moazami, *Iranian Research Organization for Science & Technology [IROST], Iran*

- 1. Introduction
- 2. Biological Control
- 3. Microbial Insecticides
 - 3.1 *Bacillus thuringiensis*
 - 3.1.1 General Overview
 - 3.1.2 Mode of Action
 - 3.2 *Bacillus thuringiensis* Var.kurstaki
 - 3.3 *Bacillus popilliae* and *Bacillus Lentimorbus*
 - 3.4 *Bacillus thuringiensis* H-14
 - 3.5 *Bacillus sphaericus*

4. Production of *Bacillus thuringiensis* and *Bacillus sphaericus*
 - 4.1 Culture Maintenance and Preservation
 - 4.1.1 Liquids
 - 4.1.2 Materials of Plant Origin
 - 4.1.3 Materials of Animal (nonmammalian) Origin
 - 4.1.4 Materials of Mammalian Origin
 - 4.1.5 Minerals
 - 4.2 Fermentation
 - 4.3 Recovery Process
 - 4.4 Formulation and Storage
 - 4.5 Bioassay Protocol for *Bacillus thuringiensis* and *Bacillus sphaericus* Preparations
 - 4.5.1 Standard Bacterial Preparation
 - 4.5.2 Assay Species
 - 4.5.3 Preparation and Reading of the Bioassay
 - 4.5.4 Calculation of Potency in International Units (IU)
 - 4.6 Bioassay Protocol for *Bacillus thuringiensis* H-14 Preparations
 - 4.6.1 Standard Bacterial Preparation
 - 4.6.2 Assay Species
 - 4.6.3 Calculation of Potency in International Units (IU)
 - 4.7 Safety and Quality Control
 - 4.7.1 Chemical Contamination
 - 4.7.2 Microbial Contamination
 - 4.8 Packaging and Distribution
5. Entomopathogenic Viruses
 - 5.1 General Overview
 - 5.2 Baculoviruses (Baculoviridae)
 - 5.2.1 Life Cycle
 - 5.2.2 Relative Effectiveness
 - 5.2.3 Appearance
 - 5.2.4 Habitat
 - 5.2.5 Current use of Baculoviruses as Insecticides
6. Entomopathogenic Fungi
 - 6.1 Formation of an Infection Structure
 - 6.2 Penetration of the Cuticle
 - 6.3 Production of Toxins
 - 6.4 Mode of Action
 - 6.5 *Lagenidium giganteum*
 - 6.6 *Verticillium lecanii*
7. Biopesticide Production
 - 7.1 Use of New Genetic-Engineering Technology
 - 7.2 Engineering Biological Control Agents
 - 7.3 Engineering Crop Plants
8. Entomopathogenic Protozoa and Microsporida
9. Entomopathogenic Nematodes
10. Biological Control of Aflatoxin Contamination of Crops
11. Integrated Pest Management
12. Market
13. Conclusion

Secondary Products from Plant Tissue Cultures

53

James C. Linden, *Colorado State University, Fort Collins, Colorado, USA*

1. Diversity and potential of plant cell culture
2. Regulation of production through elicitation and induction
 - 2.1 β -glucans
 - 2.2 Ethylene
 - 2.3 Methyl jasmonate

- 2.4 Interactions between elicitors and signals
3. Preliminary economics of using plant cell culture for secondary metabolite production
4. Limitations/opportunities for marketing plant cell culture products
5. The future for secondary products from plant tissue culture

Industrial Mycology

75

J.S. Rokem, *Department of Molecular Genetics and Biotechnology, The Hebrew University of Jerusalem, Jerusalem, Israel*

1. Introduction
2. Product range
 - 2.1 Metabolites
 - 2.2 Enzymes
 - 2.3 Biomass
 - 2.4 More recent and potential products
3. Solid State Fermentation
 - 3.1 Products from Solid State Fermentation
 - 3.1.1 Gibberellic acid – GA₃
 - 3.1.2 Glucoamylase
4. Submerged Fermentation
 - 4.1 Selected metabolites produced by Submerged Fermentation
 - 4.1.1 Lovastatin
 - 4.1.2 Red Monascus Pigments
 - 4.1.3 Rennet (Chymosin) from Mucor
 - 4.1.4 Quorn®
5. Other Developments of Industrial Mycology
 - 5.1 Heterologous Proteins by Filamentous Fungi
 - 5.2 Flavoring Agents
 - 5.3 Cheese Made with Fungi
 - 5.4 Higher Fungi for Food Flavor and Medicine
6. Conclusions

Biobutanol

98

D. T. Jones, *Department of Microbiology and Immunology, University of Otago, Dunedin, New Zealand*

1. Introduction
2. Biobutanol as a Biofuel
 - 2.1. Properties of Biobutanol as a Liquid Transportation Fuel
 - 2.2. Energy Content
 - 2.3. Octane Rating and Vapour Pressure
 - 2.4. Water Tolerance
 - 2.5. Compatibility with Existing Internal Combustion Engines
 - 2.6. Co-blending Features
 - 2.7. Handling and Distribution Advantages
 - 2.8. Synergies with Bioethanol and Biodiesel
 - 2.9. Feedstock Flexibility and Agricultural Benefits
 - 2.10. Environmental Benefits
3. Development of the Industrial ABE Fermentation Process
 - 3.1. Origins and Early History
 - 3.2. The Development of the Commercial Fermentation Industry
 - 3.3. The Rise and Decline of the Commercial ABE Fermentation Process
4. The Commercial ABE Fermentation Process
 - 4.1. Raw Materials
 - 4.2. Microorganisms Seed Cultures and Inoculum Procedures
 - 4.3. The Starched-based Batch Fermentation Process
 - 4.4. The sugar-based Batch Fermentation Process

- 4.5. Product Recovery Processing and Usage
5. Limitations of the Industrial ABE Fermentation Process
 - 5.1. Complex Two Phase Batch Fermentation
 - 5.2. Solvent Yields and Ratios
 - 5.3. Butanol Toxicity and Low Final Solvent Concentrations
 - 5.4. Susceptibility to Contamination and the Requirement for Sterility
 - 5.5. Low Value By-products and Effluent Disposal
 - 5.6. Culture and Strain Stability and Reliability
 - 5.7. Negative features of bulk chemical production by fermentations
6. Economic Perspectives
 - 6.1. Economics of the Conventional Batch ABE Fermentation Process
 - 6.2. The Solvent Market
 - 6.3. The Biofuels Market
7. Advances in Scientific Know-how
 - 7.1. Strain Development and Improvement
 - 7.2. Genetic Engineering
 - 7.3. Metabolic Engineering
 - 7.4. Alternative Production Systems
8. Advances in Process Technology
 - 8.1. Continuous Culture Systems
 - 8.2. Solvent Extraction and Recovery Processes
 - 8.3. Continuous Fermentation and Solvent Removal Systems
9. Utilization of Lignocellulosic Substrates
 - 9.1. Concerns Relating to Use of Food Crops for Biofuel Production
 - 9.2. Use of Alternative Substrates for the ABE Fermentation
 - 9.3. Physical and Chemical Degradation Technologies
 - 9.4. Genetic Manipulation
10. Conclusions and Future Prospects

Industrial Use of Enzymes

135

Michele Vitolo, *Department of Biochemical and Pharmaceutical Technology, School of Pharmacy, University of São Paulo, Brazil.*

1. Introduction
2. Sources of Enzymes
3. Enzyme Production
 - 3.1. An Overview on Downstream Processing
 - 3.1.1. Filtration
 - 3.1.2. Centrifugation and Sedimentation
 - 3.1.3. Flocculation and Coagulation
 - 3.1.4. Cell Disruption
 - 3.1.5. Extraction
 - 3.1.6. Precipitation
 - 3.1.7. Chromatography
 - 3.1.8. Finishing Operations
 - 3.1.8.1. Crystallization
 - 3.1.8.2. Drying
 - 3.1.8.3. Formulation
 - 3.1.8.4. Some Aspects on Safety in Handling Enzymes
 - 3.1.9. Invertase Production: As a Case
4. Fundamentals on Enzyme Kinetic
 - 4.1. Introduction
 - 4.2. Specificity
 - 4.3. Enzyme Activity
 - 4.3.1. Quantification of the Enzyme Activity
 - 4.3.2. Expression of the Enzyme Activity
 - 4.3.3. Factors Affecting the Enzyme Activity

- 4.3.3.1. Physical-Chemical factors
 - 4.3.3.1.1. pH
 - 4.3.3.1.2. Temperature
 - 4.3.3.1.3. Miscellaneous
- 4.3.3.2. Chemical Factors
 - 4.3.3.2.1. Activators
 - 4.3.3.2.2. Stabilizers
 - 4.3.3.2.3. Inhibitors
- 4.3.3.3. Physical Factors
- 4.3.4. Briefing on Thermodynamic of the Enzyme catalysis
- 4.3.5. An Overview on Enzyme Immobilization
- 5. A Briefing on the Uses of Enzymes
 - 5.1. Baking
 - 5.2. Starch Conversion
 - 5.3. Protein Modification with Enzymes
 - 5.3.1. Introduction
 - 5.3.2. Brewing
 - 5.3.3. Dairy Industry
 - 5.3.4. Miscellaneous uses of Proteolytic Enzymes
 - 5.4. Enzymes in Fruit Juices
 - 5.5. Miscellaneous
 - 5.5.1. Detergents
 - 5.5.2. Effluent and Waste Treatments
 - 5.5.3. Flavor Production with Enzymes
 - 5.5.4. Leather
 - 5.5.5. Textiles
 - 5.5.6. Pulp and Paper
 - 5.5.7. Edible Oils
 - 5.5.8. Enzymes in Animal Feeding
 - 5.5.9. Enzymes as Analytical Tools
 - 5.5.10. Enzymes as Medicines
 - 5.5.11. Enzymatic Biotransformations
- 6. Conclusion

Production of Heterologous Hydrolysis Enzymes within Crop Biomass for Biofuel Ethanol 220

Callista B. Ransom, *Department of Crop and Soil Sciences, Michigan State University, USA*

Mariam B. Sticklen, *Department of Crop and Soil Sciences, Michigan State University, USA*

- 1. Introduction
- 2. The Plant Cell Wall
 - 2.1 Cell wall components
 - 2.1.1 Cellulose
 - 2.1.2 Cross-linking glycans
 - 2.1.3 Pectins and other substances
 - 2.1.4 Lignin
 - 2.2 Two major types of primary cell wallsystemsystem
- 3. Cell wall degradation
 - 3.1 Microorganisms
 - 3.2 Hydrolysis
 - 3.2.1 Cellulases
 - 3.2.2 Hemicellulases
 - 3.2.3 Ligninases
- 4. Ethanol production
 - 4.1 Maize grain ethanol production
 - 4.2 The promise of cellulosic ethanol
 - 4.2.1 Cellulosic ethanol production
 - 4.2.2 Challenges to cellulosic ethanol production

5. Production of Hydrolysis Enzymes in Biomass Crops
 - 5.1 Plants as molecular biofactories
 - 5.2 Successful plant-produced hydrolysis enzymes
 - 5.3 TSP must be extracted prior to pretreatment
 - 5.4 Thermostable enzymes are desirable
 - 5.5 Subcellular targeting and sequestration
6. Other Approaches
 - 6.1 Microbial engineering
 - 6.2 Lignin pathway manipulation
 - 6.3 Up-regulation of cellulose pathway genes to increase sugar content
 - 6.4 Delayed flowering to increase biomass
 - 6.5 Genetic manipulation to increase biomass
7. Conclusion

Index **245**

About EOLSS **251**

VOLUME VII

Special Processes for Products, Fuel and Energy **1**
 John Anthony Buswell, *Institute of Edible Fungi, Shanghai Academy of Agricultural Sciences, Shanghai 201106, P.R. China.*

1. Introduction
2. Historical Background
 - 2.1. Bioproducts
 - 2.2. Biofuels
3. Current status
 - 3.1. Bioproducts
 - 3.2. Mushrooms and mushroom products
 - 3.3. Biofuels
 - 3.3.1. Biogas
 - 3.3.2. Bioethanol
 - 3.3.3. Biobutanol
 - 3.3.4. Biodiesel
4. Are biofuels the answer?
5. Future development and challenges
 - 5.1. Mushrooms and mushroom products
 - 5.2. Biofuels
 - 5.3. Biorefineries
6. Biomass energy – the future

Bio-Refineries-Concept for Sustainability and Human Development **21**
 Horst Werner Doelle, *MIRCEN-Biotechnology Brisbane and Pacific Regional Network, Brisbane, Australia*
 Edgar J. DaSilva, *Section of Life Sciences, Division of Basic and Engineering Sciences, UNESCO, France*

1. Introduction
 - 1.1 Developed Countries
 - 1.2 Developing Countries
2. Bio-Refinery Concept
3. Lignocellulosic biomass
 - 3.1 Energy production

- 3.1.1 Direct combustion
- 3.1.2 Cofiring
- 3.1.3 Cogeneration
- 3.1.4 Gasification
- 3.2 Mushroom production
- 3.3 Composting
- 3.4 Silage
- 4. Multiproduct formation from biomass crops
 - 4.1 Enzyme production
 - 4.2 Grain
 - 4.3 Sugarcane
 - 4.4 Sagopalm
 - 4.5 Palm Oil industry
 - 4.6 Fish processing industry
- 5. Product formation from human, animal and agricultural wastes
 - 5.1 Biogas
 - 5.2 Aquaculture
- 6. Conclusion

Nutriceuticals from Mushrooms

53

Shu-Ting Chang, *Department of Biology and Centre for International Services to Mushroom Biotechnology, the Chinese University of Hong Kong., China*

John Anthony Buswell, *Institute of Edible Fungi, Shanghai Academy of Agricultural Sciences, Shanghai, China.*

- 1. Introduction
- 2. Nutritional value of mushrooms
- 3. Nature of bioactive components of mushrooms
- 4. Biological effects of mushrooms and mushroom products
 - 4.1. Antitumour/anticancer effects
 - 4.2. Antioxidant-genoprotective effects
 - 4.3. Hypoglycaemic/antidiabetic effects
 - 4.4. Hypocholesterolaemic effects
 - 4.5. Antibiotic effects
 - 4.6. Other effects
- 5. Mushroom nutraceuticals
- 6. A protocol for quality mushroom nutraceuticals

Mushroom Production

74

Shu-Ting Chang, *Department of Biology and Centre for International Services to Mushroom Biotechnology, the Chinese University of Hong Kong., China*

- 1. Introduction
- 2. What are Mushrooms?
- 3. Mushroom Cultivation
 - 3.1 Major Practical Phases
 - 3.1.1 Selection of an Acceptable Mushroom Species
 - 3.1.2 Securing a Good Quality of Fruiting Culture
 - 3.1.3 Development of Spawn
 - 3.1.4 Preparation of Compost/Substrate
 - 3.1.5 Care of Mycelial (Spawn) Running
 - 3.1.6 Management of Mushroom Development
 - 3.1.7 Harvesting
 - 3.2 Historical Records
 - 3.3 Perspectives
- 4. Trends in Mushroom Production

5. Non-Green Revolution
6. Concluding Remarks

Pharmaceuticals from Algae**94**Michael A. Borowitzka, *Murdoch University, Australia*

1. Introduction
2. Antibiotics
3. Antiviral Compounds
4. Cytotoxic, Antitumour and Antineoplastic Metabolites
5. Anti-inflammatory Compounds
6. Algal Carotenoids
7. Other Activities
8. Symbiosis and Bioactive Metabolites
9. Production of Algal Metabolites
10. Conclusion

Biodiesel**118**Ariel Louwrier, *Advanced Biotechnologies Ltd., Epsom, UK*

1. Introduction
2. The Approaches
3. The Production Process
4. Biodiesel: An Evaluation of Properties
5. Biodiesel and the Environment
6. Test Programmes and Current Development
7. Legislation and Incentives
8. The Alternatives
9. Conclusions

Natural Food Colorants**138**Philippe J. Blanc, *Laboratoire Biotechnologies–Bioprocédés, INSA, Toulouse, France*

1. Introduction
2. Current Natural Colorants
3. Colorants Obtainable by Biotechnology Routes
 - 3.1 Riboflavin
 - 3.2 Carotenoids and Xanthophylls
 - 3.3 Phycobiliproteins
 - 3.4 Indigoids
 - 3.5 Anthraquinones and Napthaquinones (shikonin)
 - 3.6 Monascus Pigment
 - 3.6.1 The Fungus Monascus
 - 3.6.2 The Fungal Metabolites
 - 3.6.3 Production in Various Cultures
 - 3.6.3.1 Submerged Cultures
 - 3.6.3.2 Solid-State Cultures
 - 3.6.4 Methods Developed to Avoid Mycotoxin Production
 - 3.7 Miscellaneous Colorants
4. Conclusions

Production of Alcohol for Fuel and Organic Solvent**157**M. Bekers and A. Vīgants, *Institute of Microbiology and Biotechnology, University of Latvia, Riga, Latvia*

1. Production of Fuel Ethanol

- 1.1 Introduction
 - 1.1.1 History and Actuality
 - 1.1.2 Environmental Effects of Fuel Ethanol
 - 1.1.3 Economic Aspects and Government Policies Affecting Fuel Ethanol Production and Marketing
- 1.2 Background
 - 1.2.1 Producers and Regulation of Metabolism of Ethanol Synthesis
 - 1.2.2 Raw Materials—Renewable Resources
- 1.3 Industrial Technologies
 - 1.3.1 Medium Preparation
 - 1.3.2 Fermentation
 - 1.3.3 Distillation and Waste Utilization
- 1.4 Laboratory and Pilot Scale Technologies
 - 1.4.1 Ethanol Production by the Bacterium *Zymomonas mobilis*
 - 1.4.2 Immobilized, Flocculating and Recycling Systems
 - 1.4.3 Vacuum and Extractive Fermentation
 - 1.4.4 CASH Process and the Fermentation of Cellulosic Hydrolysates
2. Production of Organic Solvents
 - 2.1 Introduction
 - 2.1.1 History
 - 2.1.2 Use and Properties of Solvents
 - 2.2 Background
 - 2.2.1 Producers and Metabolism
 - 2.3 Technology
 - 2.3.1 Batch Process
 - 2.3.2 Semicontinuous Process
 - 2.3.3 Continuous Process
 - 2.3.4 Improvements of Technology
 - 2.3.5 Utilization of Stillage
3. Conclusion

Biotechnological Applications of Acetic Acid Bacteria in Food Production

178

Peter Raspor, *University of Ljubljana, Chair of Biotechnology, Biotechnical Faculty, Jamnikarjeva, Ljubljana, SLOVENIA*

Dusan Goranvic, *University of Ljubljana, Chair of Biotechnology, Biotechnical Faculty, Jamnikarjeva, Ljubljana, SLOVENIA*

1. Introduction
2. Traditional and current bio/technology using acetic acid bacteriaHydrocarbons
 - 2.1 Vinegar and acetic acid production
 - 2.1.1 Fruit substrate vinegars
 - 2.1.2 Starch substrate vinegars
 - 2.1.3 Spirit vinegar
 - 2.1.4 Special vinegars
 - 2.2 Cocoa production
 - 2.3 Kombucha beverage production
 - 2.4 Cellulose production
 - 2.5 L-Ascorbic acid (Vitamin C) production
 - 2.6 D-Tagatose production
3. Acetic acid bacteria as spoilers
4. Ecology
 - 4.1 Aerobic Biodegradation
 - 4.2 Anaerobic Biodegradation
5. Taxonomy
 - 5.1 Methods for cultivation and identification
6. Physiology
7. Technological solutions in bio/technology using acetic acid bacteria

- 7.1 Technological solutions in vinegar production
 - 7.1.1 Traditional slow Orleans process
 - 7.1.2 The quick process (German process)
 - 7.1.3 Submerged process
- 7.2 Technological solutions in cocoa production
- 7.3 Technological solutions in cellulose production

A Carbon-Negative Model For Production Of Feed And Fuel From Biomass

199

Thomas R Preston, *Finca Ecológica TOSOLY Santander Sur, Colombia*

- 1. Introduction
- 2. Biomass as a Source of Food or Fuel ? What are the Issues ?
 - 2.1. Sources of Biofuels
 - 2.1.1. Ethanol
 - 2.1.2. Biodiesel
- 3. Feed and Fuel from Biomass
 - 3.1. Fractionation of the Biomass
 - 3.2. The gasification Process
 - 3.3. Carbon Sequestration - A byproduct of Gasification
 - 3.4. Ethanol or Producer Gas from Biomass
- 4. Net Primary Productivity
- 5. Biomass as Food/Fuel and Recycling
- 6. Models for Small Farm Scale Production of Feed/Food and Energy
- 7. Conclusions
- 8. The Bottom Line

Integrated Thermo-Biorefinery

218

Michael Theroux, *Theroux Environmental, California, USA*

- 1. Introduction
- 2. Priorities of Waste Management and Resource Recovery
- 3. Secondary Recycling via Thermal Recovery
- 4. Feedstock Considerations
- 5. Thermal Technology Energetics
 - 5.1. Pre-combustion physical reaction stage
 - 5.2. Mass-burn incineration
 - 5.3. Devolatilization
 - 5.3.1. Primary stage pyrolysis
 - 5.3.2. Secondary stage pyrolysis
 - 5.4. Gasification
 - 5.4.1. Allothermal gasification
 - 5.4.2. Autothermal gasification
 - 5.5. Plasma gasification
 - 5.6. Reforming
- 6. Optimal Thermo-Biorefinery Campus Design
 - 6.1. Heat-first design
 - 6.2. Electricity-first design
 - 6.3. Combined heat and power (CHP)
 - 6.4. Biofuel-first design
 - 6.5. CCHP + Fuels
 - 6.6. The case for multi-path, multi-technology integration
- 7. Establishing a "Bright Line"
- 8. External Technology Validation
- 9. Conclusion

1. Introduction
2. The First Generation of Biofuels
 - 2.1 Corn and Sugarcane Ethanol and Biodiesel Processes
 - 2.2 The Ethanol Boom
 - 2.3 Impact of Ethanol on Food Prices
 - 2.4 Impact of Large Petroleum Refineries in the U.S. on Biofuels
 - 2.5 The Impact of Petroleum on Food Production and Supplies
3. The Second Generation of Biofuels: "Cellulosic Ethanol"
 - 3.1 The Biomass Generation of Biofuels
 - 3.2 What is the Real "Next Generation" of Biofuels?
 - 3.2.1 Biofuels Downsizing
 - 3.2.2 Flexibility of Feedstocks
 - 3.2.3 The Production of Value Added Foods and Nutraceuticals
 - 3.2.4 Eliminate Shipping Costs of Food Products
 - 3.2.5 The Use of Novel, Value-Added Feedstocks
 - 3.2.6 Downscaling of Fermentation Processes
 - 3.2.7 Eliminate Petroleum and Natural Gas
 - 3.2.8 Distributed Production of Biofuels
 - 3.2.9 Water Recycle
 - 3.2.10 Preservation and Use of Free Sugar Feedstocks
 - 3.2.11 The Hydrogen Highways
 - 3.2.12 Economic Development
 - 3.2.13 Organic Farms and Foods
4. Renewable Esters: The Next Generation of Hybrid Biofuels
5. The Mini-Biofuels Refinery Technologies
 - 5.1 Bio-Fuels Production From Grains: Corn, Soy, Rice, Canola, Jatropha
 - 5.2 Higher Valued Products Produced By MBR's and Their Economic Impact
 - 5.3 Foods and Nutraceuticals Produced by MBR's
 - 5.4 New Corn Hybrids
 - 5.5 New "Heart Healthy Corn" or "Nutraceutical Corn Hybrids"
 - 5.5.1 All Natural-Non-GMO Hybrids
 - 5.5.2 Greater Nutritious Protein Levels
 - 5.5.3 Nutraceutical Proteins
 - 5.5.4 Higher Essential Oil Content
 - 5.5.5 Higher Phytosterols
 - 5.5.6 No Transfats
 - 5.5.7 High Oleic Corn Oil Content
 - 5.5.8 Natural Resistant Starches
 - 5.6 Impact of Heart Healthy Corn Hybrids on Ethanol and Biofuels Production
 - 5.7 Advantages of MBR Technologies
 - 5.8 Benefits of MBR Technologies
 - 5.9 Projected Sizes and Costs of MBR Units
 - 5.10 Impact of MBR Technologies on Developing Nations
6. N-Butanol as a Renewable Fuel
 - 6.1 History of Butanol Use as a Biofuel
 - 6.2 Superior Fuel Qualities of N-Butanol
 - 6.3 The Economical Production of N-Butanol
7. Status/Business Strategy/Competitive Advantages/Market Opportunity
8. A General Discussion of the Superior Fuel Traits of Bio-butanol
9. The Old World War II ABE Fermentation
10. The Production of Bio-Butanol in Mini-Biorefineries
11. Current Status of Mini-Bio-Butanol Refineries

Plant Genome Mapping: Strategies and Applications**291**Andrew H. Paterson, *Plant Genome Mapping Laboratory, University of Georgia, Athens GA 30602, USA*

1. What is a genome, and why map it?
2. Genetic mapping
 - 2.1. Genetic markers
 - 2.1.1. Visible, or morphological markers
 - 2.1.2. Protein markers
 - 2.2. DNA markers
 - 2.3. Key characteristics of DNA markers
 - 2.3.1. Separation method
 - 2.3.2. Biallelism
 - 2.3.3. Distribution
 - 2.3.4. Orthology
 - 2.4. Types of DNA markers
 - 2.4.1. Direct analysis of native genomic DNA by the RFLP method
 - 2.4.2. Analysis of PCR-synthesized genomic DNA
 - 2.4.3. CAPS
 - 2.4.4. SCAR
 - 2.4.5. SSR
 - 2.4.6. CISP
 - 2.4.7. DArT
 - 2.4.8. Single-Nucleotide Polymorphism
 - 2.4.9. Randomly Amplified Polymorphic DNA
 - 2.4.10. Amplified Fragment Length Polymorphism
 - 2.4.11. Inter-Simple-Sequence Repeat
 - 2.4.12. Transposon Display
 - 2.4.13. Sequence-Related Amplified Polymorphism
 - 2.5. Populations for genetic mapping
 - 2.5.1. Backcross/doubled haploid
 - 2.5.2. F2
 - 2.5.3. Recombinant inbred
 - 2.5.4. Intermated
 - 2.5.5. Near-Isogenic Lines
 - 2.5.6. F1 between heterozygous parents
3. Physical mapping
 - 3.1. Clone-based physical mapping approaches
 - 3.2. Radiation hybrid mapping
 - 3.3. Cytomolecular mapping
4. Comparative genomics
 - 4.1. Pan-taxon design and application of DNA markers
 - 4.2. Deducing probable locations and functions of specific genes
5. Putting it all together -- a case study of the sorghum genome
 - 5.1. Comparative analysis using maize DNA markers provided early insights into sorghum genome organization
 - 5.2. Intraspecific and interspecific genetic maps were produced, and aligned using common markers
 - 5.3. Numerous specialized maps were produced to identify genes associated with specific traits
 - 5.4. Physical mapping provided a framework for linking a rich history of molecular genetics research to a whole-genome sequence
6. Synthesis

Biomass Feedstocks**315**Ayhan Demirbas, *Sila Science, University Mah, Mekan Sok, No 24, Trabzon, Turkey*

1. Wood and Other Forms of Biomass
2. Modern Biomass
3. Electricity Production from Biomass

Suggestions For Improving Cellulosic Biomass Refining**325**H. R. Bungay, *Department of Chemical and Biological Engineering, Rensselaer Polytechnic Institute USA*

1. Introduction
2. Processing of cellulosic biomass
3. Typical Processes
 - 3.1. Storage and Pretreatment
 - 3.2. Conversion technologies
 - 3.2.1. Acid Hydrolysis of Cellulose
 - 3.2.2. Enzymatic Hydrolysis of Cellulose
4. Dilution in Bioconversion
5. Description of a refinery
6. Other fermentations
7. Conclusions

Biohydrogen - The Microbiological Production Of Hydrogen Fuel**338**P. C. Hallenbeck, *Département de microbiologie et immunologie, Université de Montréal, Canada*
J. R. Benemann, *Benemann Associates, Walnut Creek, California, USA*

1. Introduction
2. Biological Catalysts for Hydrogen Production
3. Bioreactors for Hydrogen Production
4. Photobiological Hydrogen Production Processes
 - 4.1. Introduction: Photosynthesis and Solar Conversion Efficiency
 - 4.2. Direct biophotolysis
 - 4.3. Direct Biophotolysis with Respiratory Oxygen Uptake
 - 4.4. H₂ Production by Heterocystous Cyanobacteria (Reaction 3, Figure 1)
 - 4.5. Indirect Two-Stage Biophotolysis System
 - 4.6. Photofermentations
 - 4.7. Photobiological H₂ Production Processes - Conclusions
5. Dark Fermentations
 - 5.1. Introduction: Thermodynamics, Yields and Rates
 - 5.2. Anaerobic Dark Fermentations
 - 5.3. Respiration Assisted Dark Fermentations
 - 5.4. Indirect Respiration Assisted Biophotolysis
 - 5.5. Biological Water Gas Shift Reaction
 - 5.6. Hydrogen-Methane by Two-Phase Anaerobic Digestion
 - 5.7. Fermentative Hydrogen Production - Conclusions
6. Biohydrogen - Future Prospects

Index**363****About EOLSS****369****VOLUME VIII****Agricultural Biotechnology****1**Nancy K. Karanja, *Nairobi Microbiological Resources Center, University of Nairobi, KENYA*
James H.P. Kahindi, *United States International University-Africa, Nairobi, KENYA*

1. Introduction
2. Microbial inoculation of plants
3. Recycling of organic wastes
4. Plant cell and tissue culture
5. Fermentation and enzyme technology

6. Transformation of plants and animals
7. Crop protection through pest resistance genes
8. Livestock-based biotechnologies
9. The economics of agro-biotechnology
10. The way forward

Fermented Foods and Their Processing

19

Nduka Okafor, *Nnamdi Azikiwe University, Nigeria*

1. Introduction
2. Fermented food from cereals
 - 2.1 Wheat
 - 2.1.1 Ingredients for Modern Bread-making
 - 2.1.2 Processes of Bread making
 - 2.1.3 Systems of baking
 - 2.1.4 Role of Yeasts in Bread making
 - 2.2 Maize and/or sorghum
 - 2.2.1 Ogi, koko, mahewu
 - 2.2.2 Koko
 - 2.2.3 Mahewu
3. Fermented foods from cassava
 - 3.1 Garri
 - 3.1.1 Preparation of Garri
 - 3.1.2 Microbiology of the fermentation of Garri
 - 3.1.3 Improvements in garri
 - 3.2 Foo-foo, chikwuangue, lafun, kokonte and cinguada
4. Fermented Foods from Legumes
 - 4.1 Soybeans
 - 4.1.1 Soy sauce
 - 4.1.1.1 Soy sauce manufacture
 - 4.1.1.2 Flavor of soy sauce
 - 4.1.2 Miso
 - 4.1.2.1 Manufacture of Miso
 - 4.1.3 Natto (Fermented whole soybean)
 - 4.1.4 Sufu (Chinese soybean cheeses)
 - 4.1.4.1 Preparation of soy milk curd
 - 4.1.4.2 Molding Process
 - 4.1.4.3 Brining and Aging
 - 4.1.5 Tempeh
 - 4.2 Beans
 - 4.2.1 Idli
 - 4.2.1.1 Production of Idli
 - 4.3 Production of Ugba
 - 4.4 Production of Iru (Dawadawa)
 - 4.5 Oncom (Ontjom)
 - 4.6 Condiments from the Fermentation of Miscellaneous oil-seeds
5. Fermented foods from vegetables
 - 5.1 Sauerkraut
 - 5.2 Cucumbers [pickling]
6. Fermentations for the Production of Coffee, Tea and Cocoa
 - 6.1 Tea Production
 - 6.2 Coffee Fermentation
 - 6.2.1 Processing of coffee
 - 6.3 Cocoa Fermentation
7. Fermented foods made from milk
 - 7.1 Composition of milk
 - 7.2 Starter Cultures

- 7.3 Fermented Milks including Yoghurt
 - 7.3.1 Acidophilus Milk
 - 7.3.2 Koumis
 - 7.3.3 Kefir
 - 7.3.4 Yoghurt
- 7.4 Cheese
 - 7.4.1 Standardization of Milk
 - 7.4.1.1 Standardization of Milk
 - 7.4.1.2 Inoculation of pure cultures of lactic acid bacteria
 - 7.4.1.3 Problems of lactic acid bacteria in cheese-making
 - 7.4.1.4 Adding of rennet for coagulum formation
 - 7.4.1.5 Shrinkage of the curd
 - 7.4.1.6 Salting of the curd and pressing into shape
 - 7.4.1.7 Cheese ripening
 - 7.4.2 Types of cheeses
- 8. Fermented Food from alcohol
 - 8.1 Historic Development
 - 8.2 Types of Vinegar
 - 8.3 Vinegar production processes
 - 8.3.1 The Orleans (or slow) method
 - 8.3.2 The trickling generators (quick) method
 - 8.3.3 Submerged generators
 - 8.3.3.1 Advantages of the acetator over trickling generator
 - 8.3.3.2 Disadvantages
- 9. Food condiments made from fish
 - 9.1 Fish sauce
 - 9.2 Fish paste

Essentials of Nitrogen Fixation Biotechnology

54

Nancy K. Karanja, *Nairobi Microbiological Resources Center, University of Nairobi, KENYA*
 James H.P. Kahindi, *United States International University-Africa, Nairobi, KENYA*

- 1. Introduction
- 2. Crop Requirements for Nitrogen
- 3. Potential for Biological Nitrogen Fixation [BNF] Systems
- 4. Diversity of Rhizobia
 - 4.1 Factors Influencing Biological Nitrogen Fixation [BNF]
- 5. The Biochemistry of Biological Nitrogen Fixation: The Nitrogenase System
 - 5.1 The Molybdenum Nitrogenase System
 - 5.1.1 The Iron Protein (Fe protein)
 - 5.1.2 The MoFe Protein
 - 5.2 The Vanadium Nitrogenase
 - 5.3 Nitrogenase-3
- 6. The Genetics of Nitrogen Fixation
 - 6.1 The Mo-nitrogenase Structural Genes (nif H,D,K)
 - 6.2 Genes for nitrogenase-2 (vnf H,D,G,K,vnfA,vnfE,N,X)
 - 6.3 Regulation of Nif Gene Expression
- 7. The Potential for Biological Nitrogen Fixation with Non-legumes
 - 7.1 Frankia
 - 7.2 Associative Nitrogen Fixation
- 8. Application of Biological Nitrogen Fixation Technology
 - 8.1 Experiences of the Biological Nitrogen Fixation –MIRCENs
 - 8.2 Priorities for Action

Crop Protection through Pest-Resistant Genes**81**Stanley Freeman, *Department of Plant Pathology, Agricultural Research Organization, The Volcani Center, Bet Dagan, Israel*Agnes W. Mwang'ombe, *Department of Crop Science, University of Nairobi, Kenya*

1. Introduction
2. Mechanisms of Plant Defense
3. Insect resistance
 - 3.1 Bt δ - endotoxins
 - 3.2 Other insecticidal proteins
4. Nematode resistance
5. Fungal and bacterial resistance
 - 5.1 Single component control strategies
 - 5.1.1 Thionins and Defensins
 - 5.1.2 Antimicrobial enzymes (PR proteins)
 - 5.1.3 Phytoalexins
 - 5.1.4 Ribosome-inactivating proteins (RIPs)
 - 5.1.5 Toxin degradation compounds
 - 5.2 Multiple component control strategies
 - 5.2.1 Disease resistance via R-genes
 - 5.2.2 Systemic acquired resistance (SAR)
6. Virus resistance
 - 6.1 Protein-mediated pathogen-derived resistance (PDR)
 - 6.2 Gene silencing
 - 6.3 Nonviral gene expression
7. Weed resistance

Composting Agricultural and Industrial Wastes**93**Graham J. Manderson, *Institute of Technology and Engineering, Massey University, New Zealand*

1. Introduction
2. Defining Composting
 - 2.1 What is Composting?
 - 2.2 Compostable Materials
3. An Outline of the Composting Operation
 - 3.1 Process Considerations
 - 3.2 System Configuration
 - 3.3 Operating Conditions
 - 3.3.1 Temperature
 - 3.3.2 Pile Aeration
 - 3.3.3 Moisture
 - 3.3.4 Substrate
 - 3.3.5 Compost Mixture pH
 - 3.3.6 Odor and Its Control
 - 3.3.7 Process Additives
 - 3.4 The Mature Compost
4. Metabolic Processes in Aerobic Composting
5. Ecology of Compost Systems
 - 5.1 Microbial Populations
 - 5.1.1 Bacteria
 - 5.1.2 Fungi in the Maturing Compost
 - 5.2 Pathogens and Risks to Human Health
 - 5.2.1 Sources of Pathogens and their Inactivation
 - 5.2.2 Kinds of Primary Pathogens Present
 - 5.2.3 Opportunistic Pathogens and Allergens in Compost
6. Environmental Concerns
7. Conclusions

Silage for Animal Feed

123

Leendert't Mannetje, *Wageningen University, The Netherlands*

1. Introduction
2. History of Silage Making
3. The Ensiling Process
 - 3.1. The Harvesting and Storage Phase
 - 3.2. The Aerobic Phase
 - 3.3. The Fermentation Phase
 - 3.4. The Stable Phase
 - 3.5. The Feed-out Phase
4. Silage Microflora
5. Silage Additives
6. Silage Quality
7. Properties of Common Forages and Crops for Ensilage
 - 7.1. Grasses
 - 7.2. Maize
 - 7.3. Legumes
 - 7.4. Whole Plant Silage
 - 7.5. Sorghum
8. Silage from Crop Residues and By-products

Transgenic Plants

136

Kathleen Laura Hefferon, *Cornell Research Foundation, Cornell University, Ithaca, USA*

1. Introduction
2. Transformation of Plants
3. Herbicide and Disease-Resistant Crops
 - 3.1. Plant Virus-Resistant Crops
 - 3.1.1. Coat protein-mediated resistance
 - 3.1.2. Resistance conferred by other gene products
 - 3.2. Resistance Against Other Pathogens
 - 3.3. Resistance Against Insect Pathogens
 - 3.3.1. Transgenic crops expressing Bt toxin
 - 3.3.2. Transgenic crops expressing other insecticidal protein toxins
 - 3.4. Herbicide Resistant Transgenic Plants
4. Manufacturing Proteins in Plants
 - 4.1. Vaccines in Plants
 - 4.1.1. LT-B and CT-B
 - 4.1.2. Hepatitis B
 - 4.1.3. Norwalk Virus
 - 4.1.4. Foot and Mouth Disease Virus
 - 4.1.5. Transmissible Gastroenteritis Virus
 - 4.2. The Use of Antibodies in Plants as Immunotherapeutic Agents
 - 4.3. Biopharmaceuticals
5. Nutritional Enhancement of Plants (Nutriceuticals)
 - 5.1. Golden rice
 - 5.2. Other Nutritionally Enhanced Transgenic Plants
6. Transgenic Plants and Gene Silencing
7. Conclusions

Transgenic Technologies for Animals as Bioreactors

160

Xiangzhong (Jerry) Yang, *University of Connecticut, USA*
Bin Wang, *Nexia Biotechnologies, Inc., Canada*

1. Introduction

2. Methods for Producing Transgenic Animals as Bioreactors
 - 2.1. Producing Transgenic Animals by Direct DNA Microinjection into Zygote Pronuclei
 - 2.2. Characteristics of Transgene Integration and the Mechanism of Mosaicism
 - 2.3. Methods to Improve Transgene Integration via Pronuclear DNA Microinjection
 - 2.4. Producing Transgenic Animals Through Nuclear Transfer of Somatic Cells
 - 2.5. Retrovirus Mediated Gene Transfer
 - 2.6. Sperm Mediated Gene Transfer
3. Control of Transgene Expression in Transgenic Animal Bioreactors
 - 3.1. Protein Production in the Mammary Gland
 - 3.2. Foreign Protein Expression in Urine
 - 3.3. Foreign Protein Production in Semen
 - 3.4. Considerations of Transgene Structure and Expression
4. Conclusions

Plant Breeding and Molecular Farming

186

Philip A. Davies, *South Australian Research and Development Institute (SARDI), Australia*

1. Introduction
2. Traditional Plant Breeding
3. Biotechnology in Plant Breeding
4. Products of Crop Genetic Engineering
 - 4.1. Improved Productivity
 - 4.1.1. Herbicide Resistance
 - 4.1.2. Insect Resistance
 - 4.1.3. Virus Resistance
 - 4.1.4. Fungus Resistance
 - 4.1.5. Bacterial Resistance
 - 4.1.6. Plant Physiological Traits
 - 4.1.7. Seed Sterilization Technology
 - 4.2. New and Modified Crop Products
 - 4.2.1. Modified Proteins and Amino Acids
 - 4.2.2. Modified Oils
 - 4.2.3. Post-harvest Quality
 - 4.2.4. Modified Flower Color and Patterns
 - 4.2.5. Industrial Polymers
 - 4.2.6. Medical Products
5. Potential Consequences of Crop Biotechnology and Genetic Engineering
 - 5.1. Effectiveness in Agriculture
 - 5.2. Gene Escape to Other Plants and Species
 - 5.3. Effect on Non-target Organisms
 - 5.4. Impact on Biodiversity
 - 5.5. Impact on Human Health
 - 5.6. Impact on Plant Breeding Strategies
 - 5.7. Socioeconomic Impact
6. Risk Assessment

Biotechnology and Agrobiodiversity

204

Bert Visser, *Centre for Genetic Resources, The Netherlands*

Jan-Peter Nap, *Plant Research International, The Netherlands*

1. Introduction
2. Technical aspects of agricultural biotechnology at the interface with agrobiodiversity
 - 2.1. In vitro technologies
 - 2.2. Genetic modification and the sourcing of genes
 - 2.3. Molecular marker technology
 - 2.4. Genomics and beyond

- 2.5. The context of agricultural biotechnology
3. Agro-biodiversity as a source for biotechnological applications
4. Biotechnological tools in genetic resources management
 - 4.1. Conservation
 - 4.2. Utilization
5. Impact of biotechnology on agrobiodiversity
 - 5.1. Biological effects
 - 5.2. Socio-economic effects
 - 5.3. Nutritional and cultural effects

The Economics of Agrobiotechnology

227

J. Wesseler, *Social Science Department, Wageningen University, The Netherlands*

1. Introduction
2. Important Economic Aspects of Agrobiotechnology
 - 2.1. Research and Development Level
 - 2.2. Agriculture Sector Level
 - 2.3. Consumer Level
3. Methodological Approaches to Assess the Benefits and Costs of Agrobiotechnology
 - 3.1. Deterministic Models
 - 3.2. Stochastic Models
 - 3.2.1. Models with Stationary Stochastic Variables
 - 3.2.2. Models with Non-Stationary Stochastic Variables
4. Empirical Evidence
 - 4.1. Costs and Benefits of Agrobiotechnology
 - 4.2. Distribution of Benefits and Costs
5. Conclusions and Outlook

Conventional Plant Breeding for Higher Yields and Pest Resistance

242

Roberto Garcia-Espinosa, *Colegio de Postgraduados en Ciencias Agrícolas, México*

Raoul A. Robinson, *Retired crop scientist, Canada*

1. Introduction
2. Macro-Evolution and Micro-Evolution
3. Domestication
4. The Worldwide Redistribution of Plants
5. Stable and Unstable Protection Mechanisms
6. Quantitative and Qualitative Genetics
7. Quantitative (Horizontal) and Qualitative (Vertical) Resistance
8. The Gene-for-Gene Relationship
 - 8.1. A System of Locking
 - 8.2. The Natural Function of the Gene-For-Gene Relationship
 - 8.3. The Break Down of Resistance and the Boom and Bust Cycle of Plant Breeding
9. Vertical Resistance and Horizontal Resistance Compared
 - 9.1. Stability
 - 9.2. Space
 - 9.3. Profile
 - 9.4. Time
 - 9.5. Cultivars
10. Special Aspects of Horizontal Resistance
 - 10.1. A Second Line of Defense
 - 10.2. Horizontal Resistance is Useful
 - 10.3. Horizontal Resistance is Universal
 - 10.4. Horizontal Resistance is Durable
 - 10.5. The Erosion of Horizontal Resistance
 - 10.6. Breeding for Horizontal Resistance

- 10.7. Transgressive Segregation
- 10.8. On-Site Screening
- 10.9. Cumulative Progress
- 10.10. Plant Breeding Clubs
- 10.11. Successes in Horizontal Resistance Breeding
- 11. Yield versus Resistance
- 12. The Nature of Plant Breeding
 - 12.1. Crop Uniformity
 - 12.2. The Methods of Conventional Plant Breeding
 - 12.3. Conventional Plant Breeding for Higher Yields, Quality, and Resistance
 - 12.4. Conventional Plant Breeding and Genetic Engineering
- 13. The Future of Conventional Plant Breeding
- 14. Complexity Theory

Transgenic Vegetable Crops For Managing Insect Pests and Fungal and Viral Diseases **262**
 Zamir K. Punja, *Center for Environmental Biology, Department of Biological Sciences, Simon Fraser University, 8888 University Drive, Burnaby, British Columbia V5A 1S6, Canada*

- 1. Introduction
- 2. Genetic Engineering Technologies
 - 2.1. Tissue culture selection –
 - 2.2. Gene transfer technologies
 - 2.2.1. Agrobacterium-mediated transformation
 - 2.2.2. Direct methods for transformation
 - 2.2.2.1. Particle bombardment
 - 2.2.2.2. Protoplast-mediated transformation
- 3. Insect resistant vegetable crops
 - 3.1. Bacillus thuringiensis toxins
 - 3.2. Protease and α -amylase inhibitors
 - 3.3. Lectins
 - 3.4. Chitinases
- 4. Virus-resistant vegetable crops
- 5. Fungal-resistant vegetable crops
 - 5.1. Hydrolytic enzymes
 - 5.2. Lysozymes
 - 5.3. Peptides
 - 5.4. Pathogenesis-related proteins
 - 5.5. Phytoalexins
 - 5.6. Hydrogen peroxide
 - 5.7. Inhibition of pathogen virulence products
 - 5.8. Alteration of structural components
 - 5.9. Engineered cell death
 - 5.10. Enhanced defense responses
 - 5.11. Reduced ethylene production
- 6. Issues to consider
- 7. Conclusions

Farmers and Plant Genetic Resources **291**
 Nadine Saad, *CGIAR Systemwide Program, Canada*
 Louise Sperling, *International Center for Tropical Agriculture, Italy*
 Jacqueline A. Ashby, *CIAT, USA*

- 1. Introduction
- 2. Why Plant Genetic Resources (PGR) Are Important to Farmers
- 3. How Farmers Manage and Use Plant Genetic Resources
 - 3.1. Varietal Choice

- 3.2. Varietal Management, Recombinations, and Introductions
- 3.3. Seed Selection Within Populations
- 3.4. Storage
- 3.5. Seed Exchange and Purchase
- 3.6. Farmers' Breeding and Experimentation
- 3.7. Farmer Knowledge of Varietal Traits
4. Advancing PGR with Farmers: Joining Formal and Informal Research
 - 4.1. Participatory Plant Breeding (PPB)
 - 4.2. Impact and Potential of Participatory Plant Breeding (PPB)
 - 4.3. Supporting Informal Seed Systems
 - 4.4. In Situ Conservation
5. Developments
 - 5.1. Biotechnology Experience and Promise
 - 5.2. Addressing Issues of Intellectual Property Rights
6. Conclusion

The Role of Plant Genomics in Biotechnology

317

A.Varma and N. Shrivastava, B. V. Patel *Pharmaceutical Education & Research Development (PERD) centre, Sarkhej – Gandhinagar Highway, Thaltej, Ahmedabad, Gujarat, India*

1. Understanding the 'plant genome'
 - 1.1. Extra Nuclear Genomes
 - 1.2. Structure, Size and Organization
 - 1.3. Synteny and Collinearity of Plant Genomes
2. The science of 'Genomics'
 - 2.1. Genome Sequences – the Raw Material
 - 2.2. Structural and Functional Genomics
3. Arabidopsis Genome Sequence – The signpost of plant genomics
 - 3.1. Arabidopsis will not feed the world
 - 3.2. The International Rice Genome Sequencing Project
4. Applying genomics to Agricultural Biotechnology
 - 4.1. Agrobiotechnology Contributions
 - 4.1.1. The Flavr Savr Tomato
 - 4.1.2. The Golden Rice
 - 4.1.3. Bt Crops
 - 4.1.4. Stress Tolerant, Herbicide and Disease Resistant Crop Varieties
 - 4.2. Farming Pharmaceuticals
5. Concluding Remarks

Roles of Plant Hormones in Legume Nodulation

329

P. K. Chan and P.M. Gresshoff, *ARC Centre of Excellence for Integrative Legume Research, The University of Queensland, Australia.*

1. Introduction
2. Abscisic Acid
3. Auxin
4. Cytokinin
5. Ethylene
6. Gibberellins
7. Conclusion

Index

343

About EOLSS

351

VOLUME IX

Marine Biotechnology**1**

Indrani Karunasagar, *UNESCO MIRCEN for Marine Biotechnology, Department of Fishery Microbiology, University of Agricultural Sciences, College of Fisheries, Mangalore, India.*

1. Scope of Marine Biotechnology
2. Industries Based on Marine Biotechnology
 - 2.1. Biomedicals
 - 2.2. Biopolymers
 - 2.3. Enzymes and Biochemicals
3. Scientific Studies with a Commercial Potential
 - 3.1. Biomedical Products
 - 3.2. Biopolymers
 - 3.3. Enzymes and Biochemicals
 - 3.4. Aquaculture and Fish Production
 - 3.5. Bioinformatics

Molecular Aspects of Steroid Action in Marine Fishes**14**

B.S. Nunez, S.L. Applebaum, A.H. Berg, G.E. Dressing, A.N. Evans and C.W. Tubbs, *Department of Marine Science, The University of Texas at Austin, U.S.A.*
 T.P. Barry, *Aquaculture Program Laboratory, University of Wisconsin-Madison, U.S.A.*

1. Introduction
2. Steroid Classes
 - 2.1. Progestins
 - 2.1.1. Corticosteroids
 - 2.1.2. Maturation Inducing Steroids
 - 2.2. Androgens
 - 2.3. Estrogens
 - 2.4. Neurosteroids
3. Steroidogenesis
 - 3.1. Cholesterol Transfer
 - 3.2. Cytochromes P450
 - 3.2.1. CYP11A (Cholesterol Side Chain Cleavage)
 - 3.2.2. CYP17 (17-hydroxylase; 17,20-lyase)
 - 3.2.3. CYP21 (21-hydroxylase)
 - 3.2.4. CYP11B (11 β -hydroxylase)
 - 3.2.5. CYP19 (Aromatase)
 - 3.2.6. CYP1 α (1 α -hydroxylase)
 - 3.3. Hydroxysteroid dehydrogenases (HSDs)
 - 3.3.1. HSD3
 - 3.3.2. HSD11
 - 3.3.3. HSD17
 - 3.3.4. HSD20
4. Steroid Binding Proteins
 - 4.1. Sex Hormone Binding Globulin
 - 4.2. Corticosteroid Binding Globulins
 - 4.3. Albumin
5. Steroid Inactivating Enzymes
 - 5.1. Cytochromes P450
 - 5.2. Hydroxysteroid Dehydrogenases
 - 5.3. Steroid Reductases
 - 5.4. Sulfotransferase
 - 5.5. UDP-Glucuronosyltransferases
6. Steroid Hormone Receptors

- 6.1. Nuclear Steroid Hormone Receptors
 - 6.1.1. Progestin receptors
 - 6.1.2. Corticosteroid receptors
 - 6.1.3. Androgen Receptors
 - 6.1.4. Estrogen Receptors
 - 6.1.5. Membrane Localized Nuclear Steroid Receptors
- 6.2. Novel Membrane Steroid Receptors
 - 6.2.1. Novel Membrane Progestin Receptor
 - 6.2.2. Novel membrane Androgen Receptor
 - 6.2.3. Novel Membrane Estrogen Receptor
7. Examples of Processes Governed by Steroid Hormones
 - 7.1. Oocyte Growth and Vitellogenesis
 - 7.2. Regulation of Oocyte Maturation
 - 7.3. Regulation of Spermatogenesis
 - 7.4. Hydromineral Balance
 - 7.5. Development
8. Concluding Remarks

Marine Microbial Enzymes

47

Chandrasekaran, M. and Rajeev Kumar, S., *Microbial Technology Laboratory, Department of Biotechnology, Cochin University of Science and Technology, Cochin, Kerala, India*

1. Introduction
2. Role of Microbial Enzymes in Marine Environment
3. Enzymes from Marine Microorganisms
 - 3.1. Polysaccharases
 - 3.1.1. Starch Hydrolyzing Enzymes
 - 3.1.1.1. α -Amylase (EC-3.2.1.1)
 - 3.1.1.2. α -Glucosidase (EC-3.2.1.2)
 - 3.1.1.3. Pullulanases (EC-3.2.1.41)-Debranching Enzymes
 - 3.1.1.4. Cyclomaltodextrin-glucanotransferase (CGase EC-2.4.1.19)
 - 3.1.2. Agarase (EC-3.2.1.81)
 - 3.1.3. Alginate-lyase (EC-4.2.2.3)
 - 3.1.4. κ -carrageenanase (EC-3.2.1.83)
 - 3.1.5. α -Galactosidase (EC-3.2.1.22)
 - 3.1.6. Cellulases and Related Enzymes
 - 3.1.7. Glucanases
 - 3.1.8. Chitinases (EC-3.2.1.14)
 - 3.1.9. Other Polysaccharases
 - 3.2. Laccase (LC) (EC-1.10.3.2)
 - 3.3. Proteases
 - 3.4. Lipase (EC-3.1.1.3)
 - 3.5. Other Known Enzymes
 - 3.5.1. Amido Hydrolases
 - 3.5.1.1. L-asparaginase (EC-3.5.1.1)
 - 3.5.1.2. L-glutaminase
 - 3.5.2. Tyrosinase (EC-1.14.18.1)
 - 3.5.3. Hydrogenase
 - 3.5.4. Superoxide-dismutase (SOD, EC-1.15.1.1)
 - 3.5.5. Glucose-dehydrogenase
 - 3.6. Extremozymes (Enzymes from extremophiles)
 - 3.6.1. Thermostable Enzymes
 - 3.6.2. Cold Adapted Enzymes
 - 3.6.3. Alkalophilic Enzymes
 - 3.6.4. Halophilic and Halo Tolerant Enzymes
 - 3.7. Recognition of Valuable Extremozymes
4. Enzymes as Tools in Biotechnology

- 4.1. Restriction Enzymes from Marine Bacteria
- 4.2. Other Nucleases from Marine Bacteria
- 4.3. Bacteriolytic Enzyme by Bacteriophage from Seawater
5. Innovations in Enzyme Technology
 - 5.1. Enzyme Engineering
 - 5.2. Immobilization Technology
 - 5.3. Gene Cloning for Marine Enzymes
6. Future Prospects

Biotechnological Tools in fish health Management

80

Indrani Karunasagar, *UNESCO MIRCEN for Marine Biotechnology, Department of Fishery Microbiology, University of Agricultural Sciences, College of Fisheries, Mangalore, India.*

1. Microbial Disease Problems in Aquaculture
2. Strategies for Health Management
3. Biotechnological tools in health management
 - 3.1. Pathogen detection and disease diagnosis
 - 3.2. Biocontrol of pathogens through probiotics
 - 3.3. Protection of hosts through immunoprophylaxis
 - 3.4. Bioremediation of aquaculture environment

Molecular Tools for Improving Seafood Safety

105

Iddya Karunasagar, *University of Agricultural Sciences, College of Fisheries, Mangalore, India*

1. Introduction
2. Bacterial Pathogens Associated with Seafoods
 - 2.1. *Vibrio* spp
 - 2.2. *Salmonella*
 - 2.3. *Listeria monocytogenes*
3. Viruses
 - 3.1. Hepatitis A Virus
 - 3.2. Norwalk and Norwalk-like Viruses
4. Biotechnological Tools in Safety Assurance
 - 4.1. Biotechnological Tools for Bacterial Identification and Detection
 - 4.1.1. *Vibrio cholerae*
 - 4.1.2. *Salmonella*
 - 4.1.3. *Listeria monocytogenes*
 - 4.1.4. *Vibrio vulnificus*
 - 4.1.5. *Vibrio parahaemolyticus*
 - 4.2. Biotechnological Tools for the Detection of Pathogenic Viruses
5. Antibiotic Resistant Bacteria in Aquatic Systems and Monitoring their Presence by Molecular Methods

Marine Natural Products Biotechnology

120

Russell T. Hill, *University of Maryland Biotechnology Institute, Baltimore, Maryland, USA*

1. Historical Development
2. Present Development
 - 2.1. Introduction and Scope
 - 2.2. Pharmaceuticals
 - 2.3. Microbiological Aspects of Marine Natural Products Discovery
 - 2.4. Production Issues
 - 2.5. Enzymes
 - 2.6. Other Products
 - 2.7. Environment

- 2.8. Social Aspects
3. Future Development

Molecular Tools for the Study of Marine Microbial Diversity

138

L.K. Medlin, K. Valentin, K. Metfies, K. Töbe, *Department of Biological Oceanography, Alfred Wegener Institute for Polar and Marine Research, Germany*

Rene Groben, *Lake Ecosystem Group, Centre for Ecology & Hydrology, United Kingdom*

1. The Importance of Biodiversity Research in the Marine Environment
2. What Questions can be Answered Using Molecular Biology Techniques?
3. Evaluating Marine Biodiversity by Sequence Analysis and Fingerprinting Methods
 - 3.1. Sequence Analysis
 - 3.1.1. Which Genes to Select?
 - 3.1.2. How to Generate Sequence Data?
 - 3.1.3. Determining Biodiversity in an Environmental Sample by Sequence Analysis
 - 3.1.4. Analysing Sequences for Determining Phylogenies and Biodiversity
 - 3.1.5. DNA Barcoding
 - 3.2. Fingerprinting Methods
4. Analysis of Population Structure Using Molecular Markers
5. Molecular Probes for Identification and Characterisation of Marine Phytoplankton
 - 5.1. Introduction
 - 5.2. Probe Design
 - 5.3. Detection Methods
6. Conclusions

Bioremediation in the Marine Environment

171

Iddya Karunasagar, *Department of Microbiology and UNESCO-MIRCEN, University of Agricultural Sciences, College of Fisheries, Mangalore-575002, India*

1. Introduction
2. Types of Pollutants in the Marine Environment
 - 2.1. Petroleum Hydrocarbons
 - 2.2. Xenobiotics
 - 2.3. Heavy Metals
3. Pathways for Bioremediation
 - 3.1. Biodegradation of Petroleum Hydrocarbons
 - 3.2. Biodegradation of Xenobiotics
 - 3.3. Bioremediation of Heavy Metal Pollutants
4. Genetic Engineering and Bioremediation

Biotechnology of Archaea

186

Costanzo Bertoldo, *Technical University Hamburg-Harburg, Germany*

Garabed Antranikian, *Technical University Hamburg-Harburg, Germany*

1. Introduction
 - 1.1. Archaea Living at the Boiling Point of Water
 - 1.2. Archaea Growing at Extremes of pH
 - 1.3. Halophilic Microorganisms
2. Cultivation of Extremophilic Archaea
3. Molecular Basis of Heat Resistance
4. Screening Strategies for the Detection of Novel Enzymes from Archaea
5. Starch Processing Enzymes
 - 5.1. Heat Stable Amylases and Glucoamylases
 - 5.2. α -Glucosidases
 - 5.3. Thermoactive Pullulanases and CGTases

6. Cellulose and Hemicellulose Hydrolyzing Enzymes
7. Chitin Degradation
8. Proteolytic Enzymes
9. Alcohol Dehydrogenases and Esterases
10. DNA Processing Enzymes
 - 10.1. Polymerase Chain Reaction (PCR)
 - 10.2. DNA Sequencing
 - 10.3. Ligase Chain Reaction
11. Archaeal Inteins
12. Conclusions

Viable But NonCulturable Bacteria in the Marine Environment and the Biotechnological Tools to Detect Them **220**

Rita R. Colwell, *Center of Marine Biotechnology, University of Maryland Biotechnology Institute, Baltimore, Maryland and Department of Cell and Molecular Biology, University of Maryland, College Park, Maryland, USA*

1. Introduction
2. History of the Viable but Nonculturable Phenomenon in Bacteria

Extending Integrated Fish Farming Technologies to Mariculture in China **233**

Li Kangmin, *Asia Pacific Regional Research & Training Center for Integrated Fish Farming No. 9 Shanshui West Road Wuxi 214081 China*

1. Introduction
2. Rationale of Integrated Aquaculture and Mariculture
 - 2.1. Chinese Philosophy and ZERI Concept
 - 2.2. New Natural Philosophy and the Five Kingdoms
3. Integrated Fish Farming
 - 3.1. Historical Records of Integrated Fish Farming
 - 3.1.1. Yu Hu Bing
 - 3.1.2. The Development of Inland Aquaculture Depended upon Natural Seed Supply in Long Period of Time
 - 3.1.3. The Third Stage
 - 3.2. Characteristics of Integrated Fish Farming
 - 3.2.1. Integrated Fish Farming Models vary from Different Natural Conditions and Diversified Economy
 - 3.2.2. Recycling Agricultural Wastes into Things of Value
 - 3.2.3. With Rational Utilization of Natural Resources Integrated Fish Farming is being called as Food-saving, Water-saving, Land-saving and Energy-saving Type of Fish Farming
 - 3.3. Contents of Integrated Fish Farming Systems
 - 3.4. Models of integrated fish farming systems
 - 3.5. Expansion of IFF in Reservoir Fisheries
 - 3.6. Constraints
4. Successful Models in New Stages
 - 4.1. A new Integrated Fish Farming Model
 - 4.1.1. Beneficial Microorganism Remediation
 - 4.1.2. Aquatic Vascular Plant Remediation
 - 4.1.3. Aquatic Filter-feeding Animal Remediation
 - 4.2. New model of Rice Fish: Weeding and Eradicating Harmful Insects in paddies by fry
 - 4.3. Pearl mussel *Hyriopsis cumingii* culture and processing industry
 - 4.4. Crab Island Circular Economy Model
5. Mariculture
 - 5.1. Oceanic resources in China
 - 5.2. Status Quo of Mariculture Development in China
 - 5.3. Extending Integrated Fish Farming Technologies to Mariculture

- 5.3.1. Induced Breeding in Mariculture
- 5.3.2. Integration of Mollusks and Seaweed
- 5.3.3. Di-species Polyculture and Multiple Species Polyculture
- 5.3.4. Integrated pest/disease management on the basis of 5 kingdom
- 6. Eight New Concepts or Trends of Integrated Aquaculture and Mariculture
 - 6.1. Polyculture practiced from mere Fish Species (4-7 cultivated species) to Fish/Turtle, Fish Mollusks to Multiple Aquatic Species (Fish, Shrimps, Mollusks and Algae); from Complementary to Predator-prey
 - 6.2. Some Euryhaline Species in Mariculture can be cultured in Brackish Water, even in Freshwater
 - 6.3. Some Eurythermal Organisms in the South can be cultured in the North vice versa
 - 6.4. Integration of Culture Fisheries within Macro Agriculture
 - 6.5. Integration of Culture Fisheries with Industries
 - 6.6. Artificial Breeding is to turn Wild Species into be Cultured Species
 - 6.7. Hybridization Utilization
 - 6.8. Circular Aquaculture and Mariculture

VOLUME X

Environmental Biotechnology - Socio-Economic Strategies for Sustainability	1
<i>Horst Werner Doelle, MIRCEN-Biotechnology Brisbane and the Pacific Regional Network Kenmore 4069, Australia</i>	
<i>Poonsuk Prasertsan, Department of Industrial Biotechnology, Faculty of Agro-Industry, Prince of Songkla University, Hat Yai, Thailand</i>	

1. Introduction
2. Nature's Cycles of Matter
 - 2.1. General Description
 - 2.2. The Carbon Cycle
 - 2.3. The Nitrogen Cycle
 - 2.3.1. Nitrogen fixation
 - 2.3.2. Nitrification
 - 2.3.3. Denitrification
 - 2.4. The Sulfur Cycle
 - 2.4.1. Oxidative sulfur transformations
 - 2.4.2. Reductive Sulfur Transformation
 - 2.5. Phosphorous Cycle
 - 2.6. Interrelations between the cycling of individual elements
3. Socio-economic strategies
 - 3.1. Community involvement and joint venture capital
 - 3.2. Multiproduct formation from renewable resources
 - 3.2.1. Grain
 - 3.2.2. Sagopalm
 - 3.2.3. Sugarcane
 - 3.2.4. Agro-Industries
 - 3.3. Bioconversion of wastes
 - 3.3.1. Anaerobic Digestion - energy [biogas], biofertiliser and food production
 - 3.3.2. Gasification - energy [electricity] production
 - 3.3.3. Ethanol - biofuel production
 - 3.3.4. Composting - biofertiliser production
 - 3.3.5. Mushroom production - food and biofertiliser production
 - 3.3.6. Aquaculture

- 3.3.7. Microbial Biomass Protein and Silage - feed production
4. Benefits to the environment

Recycling Livestock Excreta in Integrated Farming Systems

41

Thomas Reginald Preston, *University of Tropical Agriculture, Phnom Penh, Cambodia*

1. Introduction
2. Livestock Excreta as Livestock Feed
3. Potential Benefits from the Recycling of Livestock Excreta
4. Methods of Processing (Recycling) of Livestock Excreta
5. The Biodigester Sub-system
 - 5.1. Types of Biodigester
 - 5.2. Factors Influencing the Cost and Performance of Plastic Biodigesters
 - 5.2.1. The Plastic Tube
 - 5.2.2. The Inlet and Outlet Pipes
 - 5.2.3. Connecting the Tubular Film with the Inlet and Outlet Pipes
 - 5.2.4. The Gas Line
 - 5.2.5. The Reservoir
 - 5.3. Management Factors that Govern Gas Production
 - 5.3.1. Size of the Biodigester
 - 5.3.2. The Loading Rate
 - 5.3.3. Residence Time
 - 5.3.4. Liquid Volume
 - 5.3.5. Level or Inclined Biodigesters
 - 5.3.6. Animal Species
 - 5.4. Commonly Encountered Problems
 - 5.4.1. Life-span of Tubular Polyethylene Biodigesters
 - 5.4.2. Accumulation of Sludge and Scum
 - 5.4.3. Water in the Pipeline
6. Excreta as Source of Nutrients for Water Plants, Terrestrial Crops and Earthworms
 - 6.1. Water Plants
 - 6.1.1. Cultivating Duckweed
 - 6.1.1.1. Construction of the Ponds
 - 6.1.1.2. Nutritive Value of Duckweed
 - 6.1.1.3. Fertilizing the Duckweed
 - 6.1.1.4. Problems and Possible Solutions
 - 6.2. Fish Ponds
 - 6.3. Earthworms
 - 6.3.1. Background
 - 6.3.2. Species of Earthworm
 - 6.3.3. Management
 - 6.3.4. Production Coefficients
 - 6.4. Manure and Biodigester Effluent as Fertilizer for Field Crops
 - 6.4.1. Goat Manure as Fertilizer
 - 6.4.2. Biodigester Effluent
7. Conclusions

Recycling of Agro-Industrial Wastes Through Cleaner Technology

64

Poonsuk Prasertsan, *Prince of Songkla University, Thailand*

Suteera Prasertsan, *Prince of Songkla University, Thailand*

Aran H-Kittikun, *Prince of Songkla University, Thailand*

1. Introduction
2. Sources and problems of agro-industrial wastes
3. Waste management hierarchy
 - 3.1. Waste minimization or waste reduction

- 3.1.1. Waste conservation
- 3.1.2. Waste segregation
- 3.2. Waste utilization (reuse, recovery / recycling)
- 3.3. Waste treatment
- 3.4. Waste disposal
- 4. Concept of Clean Technology
 - 4.1. Clean Technology Techniques
 - 4.1.1. Planning and organization
 - 4.1.2. Pre-assessment
 - 4.1.3. Assessment
 - 4.1.4. Feasibility study
 - 4.1.5. Implementation
 - 4.2. Waste minimization process
 - 4.2.1. Inventory management and improved operations
 - 4.2.1.1. Inventory and trace of all raw materials
 - 4.2.1.2. Improve material receiving, storage and handling practices
 - 4.2.1.3. Maintain strict preventive maintenance (PM) program
 - 4.2.1.4. Implement employee training and management feedback
 - 4.2.2. Equipment modifications
 - 4.2.2.1. Install equipment that produces minimal or no waste
 - 4.2.2.2. Redesign equipment or production lines to produce less waste
 - 4.2.2.3. Improve operating efficiency of equipment
 - 4.2.2.4. Modify equipment to enhance or permit recovery or recycling options
 - 4.2.2.5. Eliminate source of leaks and spills
 - 4.2.3. Production process modifications
 - 4.2.3.1. Optimize reactions and raw material used
 - 4.2.3.2. Modify process conditions or practices to reduce waste generation
 - 4.2.4. Waste recycling
 - 4.2.4.1. On-site recycling
 - 4.2.4.2. Off-site recycling
 - 4.2.4.3. Participation in waste exchanges (using one company's waste as another's feedstock)
- 5. Future prospect of clean technologies

Urban Rooftop Microfarms

89

Geoffrey Eric Wilson, *Urban Agriculture Online, Australia*

- 1. Introduction
- 2. Microfarming—What Is It?
- 3. Why Organic Hydroponics?
- 4. Sample Projects
- 5. The Silwood Suburban Microfarm
- 6. Mt. Gravatt Study
- 7. Profitability
- 8. Conclusion

Biomass and Organic Waste Conversion to Food, Feed, Fuel, Fertilizer, Energy and Commodity Products

104

Horst Werner Doelle, *MIRCEN-Biotechnology, Australia*

- 1. Introduction
- 2. Planning Strategies
 - 2.1. Historical Development of the Clean Bioprocess Technology Concept
 - 2.2. Future Planning Strategies for Urban and Rural Sustainability
 - 2.3. The Concept of Bio-Refinery
 - 2.4. Bio-refinery Management
- 3. Agricultural Production Unit

4. The Bioprocess Unit
 - 4.1. Raw Material
 - 4.2. Food, Feed, Fertilizer and Energy Production from Lignocellulosic Material
 - 4.2.1. Food Production
 - 4.2.2. Animal Feed Production
 - 4.2.3. Fertilizer
 - 4.2.4. Energy
 - 4.2.4.1. Direct Combustion for Electricity and Heat Generation
 - 4.2.4.2. Thermo-chemical Processes
 - 4.2.4.3. Microbial Processes
 - 4.3. Food, Feed, Fertilizer and Energy Production from Non-lignocellulosic Polymers
 - 4.3.1. Polymer Conversion into Monomeric Units for Microbial Processing
 - 4.3.2. Microbial Process Development
 - 4.3.3. Multiproducts from Sagopalm (Metroxylon sagu)
 - 4.3.3.1. Lignocellulosic Processing
 - 4.3.3.2. Non-lignocellulosic Biomass Utilisation
 - 4.3.4. Multiproduct Formation from Sugarcane
 - 4.3.5. Food Processing Industries
 - 4.3.6. Multiproducts from Palm oil industry
5. Waste Management Control Unit

Health And Environmental Aspects Of Recycled Water

138

J.G. Atherton, *Kenmore, Brisbane, Australia*

1. Introduction
2. Why Recycle?
 - 2.1 Economic Advantage
 - 2.2 Resource Constraints
 - 2.3 Equality of Access
 - 2.4 Environmental Drivers
 - 2.5 Intergenerational Equity
 - 2.6 Recycled Water—a Valuable Resource
3. Uses of Recycled Water
 - 3.1 Water Quality to Fit the Purpose
 - 3.2 Recycling in Agriculture
 - 3.3 Recycling in Industry and Commerce
 - 3.4 Recycling in Urban Areas
4. Issues and Options in the Use of Recycled Water
 - 4.1 General Health Considerations
 - 4.2 Risk Assessment
 - 4.3 Epidemiological Studies
 - 4.4 Defining an Acceptable Health Risk
 - 4.5 Setting Appropriate Water Quality Criteria
 - 4.6 Microbiological Contaminant Management
 - 4.7 Indicator Organisms
 - 4.8 Identification Methods based on Nucleic Acids Ingestion Pathways
 - 4.9 Ingestion Pathways
 - 4.10 Chemical Contaminant Management
 - 4.11 Pesticides, Herbicides, Endocrine Disruptors and Artificial Hormones
 - 4.12 Cyanobacterial Toxins (Blue-Green Algal Toxins)
 - 4.13 Stormwater Management
 - 4.14 Quality Assurance
 - 4.15 Research Needs
5. Treatment Technologies
 - 5.1 General Treatment Processes
 - 5.1.1 Physico-Chemical Treatment Processes
 - 5.1.2 Biological Treatment Processes

- 5.1.3 Chemical Disinfection
- 5.1.4 Physical Disinfection
- 5.2 Domestic Scale Treatment Technologies
- 5.3 Local and Regional Treatment Technologies
- 5.4 Storage and Transport Technologies
- 5.5 Managed Aquifer Recharge Methods
- 5.6 Research Needs
- 6. Legal Issues
 - 6.1 Regulation
 - 6.2 Ownership of the Resource
 - 6.3 Legal Liability
- 7. Economics
- 8. Community Involvement

Microorganisms as Catalysts for the Decontamination of Ecosystems and Detoxification of Organic Chemicals **167**

Wolfgang Babel, *UFZ-Centre for Environmental Research, Germany*
 Roland H. Muller, *UFZ Centre for Environmental Research, Germany*

- 1. Introduction
- 2. Key Reactions of Microbially Mediated Degradation of Organics
- 3. Modes of Microbially Mediated Detoxification of Organics
 - 3.1. Detoxification by Productive Degradation (Detoxification of Potential Growth Substrates)
 - 3.2. Detoxification by Non-Productive Conversion (Detoxification of Non-Growth Substrates)
- 4. Approaches to Increasing Efficiency and Velocity of Detoxification of Organics
 - 4.1. The Auxiliary Substrate Concept
 - 4.2. The Principle of Start Assistance
 - 4.3. Defined Mixed Cultures
- 5. Concluding Remarks

Biohydrometallurgy **195**

Fernando Acevedo, *Catholic University of Valparaiso, Chile*

- 1. Introduction
 - 1.1. General
 - 1.2. Historical Development
 - 1.3. The Future of Biomining Technologies
- 2. Microbiology of Biomining Processes
 - 2.1. Leaching Bacteria
 - 2.2. Leaching Mechanisms
 - 2.3. Kinetics of Ferrous Ion Oxidation
- 3. Effect of Operation Variables
 - 3.1. Nutrients and Inhibitors
 - 3.2. Gaseous Nutrients
 - 3.3. Effect of Temperature and pH
 - 3.4. Mineral Composition and Particle Size
 - 3.5. Operation Mode
- 4. Biorecovery of Copper
 - 4.1. Copper Mining
 - 4.2. Copper Bio-Mining
- 5. Bio-Oxidation of Gold Ores
 - 5.1. Gold Mining
 - 5.2. The Bio-Oxidation Process

Biodegradation of Xenobiotics

215

Susanne Fetzner, *Department of Microbiology, University of Oldenburg, Germany*

1. Introduction: General Features of the Microbial Degradation of Xenobiotics
 - 1.1. Biodegradation, Biotransformation, and Co-metabolism
 - 1.2. What are Xenobiotics?
 - 1.3. Parameters Influencing Bioavailability and the Rate of Biodegradation
2. Polycyclic Aromatic Hydrocarbons
3. Halogenated Hydrocarbons
 - 3.1. Haloaliphatic Compounds
 - 3.1.1. Aerobic Biodegradation
 - 3.1.2. Anaerobic Biodegradation
 - 3.2. Haloaromatic Compounds
 - 3.2.1. Aerobic Biodegradation
 - 3.2.2. Anaerobic Biodegradation
4. Nitroaromatic Compounds
 - 4.1. Aerobic Biodegradation
 - 4.2. Anaerobic Biodegradation
5. Azo Compounds
6. s-Triazines
7. Organic Sulfonic Acids
8. Synthetic Polymers
9. Conclusions

Sustainable Aquaculture: Concept or Practice

247

William A. Wurts, *Aquaculture, Cooperative Extension Program, Kentucky State University, USA*

1. Sustainability
2. The Origins and Evolution of Aquaculture
3. Green and Blue Revolutions
4. Sustainable Aquaculture Practices
5. Dynamics of Intensive Culture Ponds
6. Reduced Stocking and Feeding
7. Harvesting Plankton to Recycle Nutrients and Improve Sustainability
8. Economic and Social Considerations
9. Managing Global Ecosystems

Biogas as Renewable Energy from Organic Waste

262

Amrit B. Karki, *Consolidated Management Services Nepal (P) Ltd, Kathmandu, Nepal*

1. Introduction
2. Biomass Waste
 - 2.1. Plant Waste
 - 2.2. Animal Waste
 - 2.3. Human Waste
3. Energy Production Using Anaerobic Digestion Technology
 - 3.1. Biogas Technology
 - 3.2. Biogas Potential
 - 3.3. Characteristic and Composition of Biogas
 - 3.4. Designs of Anaerobic Reactors
 - 3.4.1. Floating Drum Digester
 - 3.4.2. Fixed Dome Digester
 - 3.4.3. Deenbandhu Model
 - 3.4.4. Bag Digester
 - 3.4.5. Plug Flow Digester
 - 3.4.6. Anaerobic Filter

- 3.4.7. Up-flow Anaerobic Sludge Blanket (UASB)
- 3.5. Conditions for Anaerobic Fermentation
 - 3.5.1. Temperature
 - 3.5.2. pH
 - 3.5.3. Dilution
 - 3.5.4. Necessary Elements and C/N Ratio
 - 3.5.5. Loading Rate
 - 3.5.6. Detention Time
- 3.6. Process of Anaerobic Fermentation for Methane Generation
 - 3.6.1. Hydrolysis
 - 3.6.2. Acid Formation
 - 3.6.3. Methane Formation
- 3.7. Use of Biogas
 - 3.7.1. Lighting
 - 3.7.2. Cooking
 - 3.7.3. Other Uses of Biogas
- 3.8. Implications of Biogas System
- 4. Energy from Garbage and Municipal Solid Waste
 - 4.1. Concept and Options for Treating the Municipal Solid Waste
 - 4.2. Anaerobic digestion of municipal solid waste [MSW]
 - 4.2.1. Demonstration of Biogas Plant for Treating MSW Experimented at Knudmosevaerket in Denmark
 - 4.2.2. Technical Data Regarding Proposed Banepa Municipality Biogas Plant in Nepal
- 5. Energy from Human and/or Animal Waste: Case Studies
 - 5.1. Latrine-attached Bio-digesters
 - 5.1.1. Objectives
 - 5.1.2. Installation, Operation and Use of Community Latrines-cum Bio-digester
 - 5.1.3. Use of Gas and Digested Effluent
 - 5.1.4. Sustainability of the Programme
 - 5.2. Bio-digester Fed with Latrine Waste and Elephant Dung at Machan Wildlife Resort Chitwan, Nepal
 - 5.2.1. Background
 - 5.2.2. Objectives and Scope
 - 5.2.3. Raw Materials
 - 5.2.4. Installations of latrines-cum-Bio-digester
 - 5.2.5. Operation of Bio-digester
 - 5.3. Bio-digester fed with Sewerage, Kitchen Waste and Lawn Grasses
 - 5.3.1. Background
 - 5.3.2. Objectives and Scope
 - 5.3.3. Installation of Bio-digester
 - 5.3.4. Raw Materials
 - 5.3.5. Operation of Bio-digester
 - 5.3.6. Saving of Energy and Money from Biogas installation

Biodiversity: The Impact of Biotechnology

293

Richard Braun, *BIOLINK, Bern, Switzerland*

Klaus Ammann, *Botanical Garden, University of Bern, Bern, Switzerland*

- 1. Introduction
- 2. The Essence of Biodiversity
 - 2.1. Native biodiversity
 - 2.2. Agricultural biodiversity
 - 2.3. Human population expansion
- 3. International agreements
 - 3.1. The Convention on Biological Diversity (CBD)
 - 3.2. The Cartagena Protocol on Biosafety
- 4. Loss of biodiversity and conservation

- 4.1. Reduction of biodiversity
- 4.2. Conservation Strategies
5. Applications of biotechnology and its effect on biodiversity
 - 5.1. Biotechnology for the acquisition of knowledge
 - 5.2. Direct gene transfer to crops and farm animals
 - 5.3. Native Biodiversity and Biotechnology
 - 5.4. Agricultural Biodiversity and Biotechnology
6. Social consequences
 - 6.1. Economic considerations
 - 6.2. Ethical Considerations
 - 6.3. A brief case study: Biotechnology in India

Biotechnology in the Environment: Potential Effects on Biodiversity

314

Brian R. Johnson, *Natural England, UK*

Anna R. Hope, *Natural England, UK*

1. Introduction
 - 1.1. Agriculture and biodiversity
 - 1.2. Background to crop breeding
 - 1.3. Traditional breeding versus genetic engineering
2. Defining ecological risk
 - 2.1. Framework for ecological risk assessment
 - 2.1.1. Ecological risks from transgenic crops
 - 2.1.2. Defining ecological harm
 - 2.2. The Precautionary Principle
 - 2.3. Post release monitoring
3. Direct risks of transgenic crops
 - 3.1. Ecological interactions
 - 3.1.1. The agricultural ecosystem
 - 3.1.2. Non-agricultural ecosystems
 - 3.2. Risks to biodiversity
 - 3.2.1. Altered toxicity
 - 3.2.1.1. Impacts on non-target organisms
 - 3.2.1.2. Target pest resurgence following development of resistant populations
 - 3.2.2. Gene flow
 - 3.2.2.1. Behaviour of transgenes in plants
 - 3.2.2.2. Behaviour of transgenes in other organisms
 - 3.3. Management of direct risks
4. Indirect risks of GM crops
 - 4.1. Impacts of changed agricultural practice on biodiversity
 - 4.1.1. Links between crops and wildlife - the natural warning system
 - 4.2. Other indirect impacts on biodiversity
 - 4.3. Management of indirect risks
5. Ecological risks and sustainability

Bioremediation: an Overview

344

Maurizio Vidali, *Dipartimento di Chimica Inorganica, Metallorganica, e Analitica, Università di Padova
Via Loredan, Padova, Italy*

1. Introduction
2. Principles of Bioremediation
3. Factors of Bioremediation
4. Microbial Population for Bioremediation Processes
5. Environmental Factors
 - 5.1. Nutrients
 - 5.2. Environmental requirements

6. Bioremediation Strategies
 - 6.1. *In situ* bioremediation
 - 6.2. Ex situ bioremediation
 - 6.3. Advantages of bioremediation
 - 6.4. Disadvantages of bioremediation
7. Phytoremediation

Microbial Resource Management: The Road to Go for Environmental Biotechnology 361

W. Verstraete, L. Wittebolle, T. van de Wiele, N. Boon, *Laboratory of Microbial Ecology and Technology, Ghent University, Belgium*
 K. Heylen, B. Vanparys and P. de Vos, *Laboratory of Microbiology, Ghent University, Belgium*

1. Introduction
2. Microbial Resources: "quoi de neuf ?" (What is new ?)
3. Microbial Resource Management (MRM)
 - 3.1. Three key strategies in MRM
 - 3.2. Three missing links in MRM
 - 3.3. Four Paradigms about Microbial Interactions
 - 3.4. MRM in Practice
4. Exciting new potentials of MRM in Relation to the Super Challenges
 - 4.1. Climate Change
 - 4.2. Energy Supply
 - 4.3. Health and Disease
 - 4.4. Sustainable Environment
 - 4.4.1. Plant growth
 - 4.4.2. Biofilms/Bio-Aggregation Engineering
 - 4.4.3. New Catalysis
 - 4.4.4. The Mineral Cycles
5. Conclusions

Appropriate And Inappropriate Biotechnology For Developing Countries 379

E.R. Ørskov, *Macaulay Institute, Craigiebuckler, Aberdeen AB15 8QH, UK*

1. Introduction
2. Which type of Biotechnology may be appropriate
 - 2.1. Inappropriate Biotechnology – GM crops
 - 2.2. Appropriate Biotechnology – Complementary Multi-cropping

Vermiculture Industry In Circular Economy 386

Li Kangmin, *Asian Pacific Regional Research & Training Center for Integrated Fish Farming, Freshwater Fisheries Research Center, Chinese Academy of Fishery Sciences, Shanshui West Road Wuxi China*

1. Introduction
2. Necessity to develop a vermiculture industry
3. Status of the vermiculture industry
4. Where is the orientation of vermiculture?
 - 4.1. Organic waste disposal
 - 4.2. Call For Castings To Improve Soil
 - 4.3. Source of animal protein feed
 - 4.4. Raw Materials for Pharmaceutical Biological Products
5. Measures Taken In Vermiculture Industry

Index 401

About EOLSS 407

VOLUME XI

Bio-Cultural Diversity and Medicine 1
 Edgar J. DaSilva, *Former Director, Division of Life Sciences, Paris, France*
 Murukesan V. Krishnapillai, *College of Micronesia-FSM, Colonia, Yap, Federated States of Micronesia*
 Pier Giovanni d'Ayala, *Secretary-General, INSULA*

1. Introduction
2. Biocultural diversity
 - 2.1. Africa
 - 2.2. Arab States
 - 2.3. Asia
 - 2.4. Europe
 - 2.5. Latin America and the Caribbean
 - 2.6. The Pacific Region
3. Socio-economic Diversity
 - 3.1. Africa
 - 3.2. Arab States
 - 3.3. Asia
 - 3.4. Europe
 - 3.5. Latin America and the Caribbean
 - 3.6. The Pacific Region
4. Conclusion

Blood: The Essence of Humanity 31
 Shilpa Mehta, *Hematology Laboratory, India*
 Sunil J. Parekh, *Hematology Laboratory, India*
 Edgar J. DaSilva, *International Scientific Council for Island Development, France*

1. Introduction
2. Blood Composition and Functions
 - 2.1. Red Blood Cells (Erythrocytes)
 - 2.2. White Blood Cells (Leukocytes)
 - 2.3. Platelets (Thrombocytes)
 - 2.4. Plasma
 - 2.5. Blood Components in Diagnosis of Diseases
3. Blood Groups
 - 3.1. Blood group systems
 - 3.2. ABO and Rh Blood Group System
 - 3.3. ABO and Rh Grouping Methods
 - 3.3.1. Forward Grouping
 - 3.3.2. Reverse Grouping
 - 3.3.3. Cross Matching
 - 3.3.4. Direct Coombs (Antiglobulin) Test (DCT)
 - 3.3.5. Indirect Coombs (Antiglobulin) Test (ICT)
4. Blood Transfusion - Safety and Transmission of Diseases
 - 4.1. Safety in Blood Transfusion
 - 4.2. Pre-donation considerations
 - 4.3. Adverse Effects of Blood Transfusion
 - 4.3.1. Transfusion Reactions
 - 4.3.2. Transfusion-Associated Graft versus Host Disease (TA-GvHD)
 - 4.3.3. Transfusion-Related Acute Lung Injury (TRALI)
 - 4.4. Blood Component Therapy

- 4.4.1. Collection of Blood for Transfusion
- 4.4.2. Preparation of red cells
- 4.4.3. Preparation of plasma
- 4.4.4. Preparation of cryoprecipitate
- 4.4.5. Preparation of platelet concentrate
- 4.4.6. Preparation of apheresis platelets
- 4.4.7. Plasma derivatives
- 4.5. Blood doping
- 5. Red Cell Indices and Morphology in Disease Diagnosis
 - 5.1. Red Cell Indices
 - 5.2. Morphology of Red Cells
 - 5.2.1. Size
 - 5.2.2. Shape
 - 5.2.3. Color
 - 5.2.4. Inclusions
 - 5.2.5. Nucleated Red Cells
 - 5.3. Red Cell Indices in Diagnosis
 - 5.4. Reticulocytes and their Importance
- 6. Anemias
 - 6.1. Iron Deficiency Anemia
 - 6.1.1. Stages of Iron Deficiency
 - 6.1.2. Causes of Iron deficiency are:
 - 6.1.3. Symptoms and Signs of Iron deficiency are:
 - 6.1.4. Treatment of Iron deficiency
 - 6.2. Thalassemias
 - 6.3. Sickle Cell Anemia
 - 6.4. Sideroblastic Anemia
 - 6.5. Megaloblastic Anemia
 - 6.6. Hemolytic Anemias
 - 6.7. G6PD Deficiency
- 7. Leukemias
 - 7.1. Acute Leukemias
 - 7.1.1. Acute myeloid leukemia (AML)
 - 7.1.2. Acute lymphoid leukemia (ALL)
 - 7.1.3. Clinical Features in AML and ALL
 - 7.2. Chronic Leukemias
 - 7.2.1. Clinical features in CML and CLL
 - 7.2.2. Hairy Cell Leukemia (HCL)
- 8. Bleeding and Clotting Disorders
 - 8.1. Bleeding Disorders
 - 8.1.1. Hemophilia
 - 8.1.2. Von Willebrands Disease (vWD)
 - 8.2. Clotting Disorders
- 9. Blood Parasites
 - 9.1. Malaria
 - 9.1.1. Types of Malaria
 - 9.1.2. Life Cycle of Malarial Parasite
 - 9.1.3. Clinical Features of Malaria
 - 9.1.4. Hematological Complications of Malaria
 - 9.1.5. Complications of Plasmodium Infections
 - 9.1.6. Treatment of Malaria
 - 9.2. Filariasis
 - 9.3. Kala-Azar
 - 9.4. Trypanosomiasis
- 10. Blood Substitutes
 - 10.1. Red blood cell substitutes
- 11. Blood and the Arts
- 12. Conclusion

Compulsory License Regimes For Public Health In Europe

73

Esther van Zimmeren and Geertrui Van Overwalle, *Center for Intellectual Property Rights, K.U.Leuven, Belgium*

1. Introduction
2. The Context: The BRCA-Controversy
3. Compulsory Licenses
 - 3.1. Concept
 - 3.2. Legal Framework
 - 3.3. Grounds
4. Conventional Compulsory License
 - 4.1. Types
 - 4.1.1. Failure to Work
 - 4.1.2. Dependency
 - 4.1.3. Public Interest
 - 4.2. Application Procedure
 - 4.3. Advantages and Shortcomings
5. Compulsory License for Public Health
 - 5.1. Legal Framework
 - 5.1.1. International
 - 5.1.2. National
 - 5.2. Scope
 - 5.2.1. Material Scope
 - 5.2.2. Personal Scope
 - 5.2.3. Geographical Scope
 - 5.3. Application Procedure
 - 5.4. Legal Nature
 - 5.5. Advantages and Shortcomings
6. Conclusion

Medical Mycology

103

Stephen Davis, *Mycology Unit, S. A. Pathology, Women's and Children's Hospital Campus, Adelaide, South Australia*

1. Introduction
2. Classes of fungi that are of Medical Interest
 - 2.1. Basidiomycetes
 - 2.2. Zygomycetes
 - 2.3. Ascomycetes
 - 2.4. Mitosporic fungi (Fungi imperfecti)
 - 2.4.1. Blastomycetes
 - 2.4.2. Coelomycetes
 - 2.4.3. Hyphomycetes
3. Clinical groupings of fungal infections
 - 3.1. Superficial infections
 - 3.1.1. Pityriasis versicolor
 - 3.1.2. Tinea nigra
 - 3.1.3. Black piedra
 - 3.1.4. White piedra
 - 3.2. Cutaneous infections
 - 3.2.1. Dermatophytosis (Ringworm and Tinea)
 - 3.2.1.1. Tinea capitis
 - 3.2.1.2. Tinea corporis
 - 3.2.1.3. Tinea cruris
 - 3.2.1.4. Tinea pedis
 - 3.2.1.5. Tinea manuum
 - 3.2.1.6. Tinea unguium
 - 3.2.2. Thrush

4. Subcutaneous infections
 - 4.1. Chromoblastomycosis
 - 4.2. Eumycotic Mycetoma
 - 4.3. Phaeohyphomycosis
 - 4.4. Hyalohyphomycosis
 - 4.5. Sporotrichosis
 - 4.6. Subcutaneous Zygomycosis
 - 4.6.1. Mucormycosis
 - 4.6.2. Entomophthoromycosis
5. Systemic infections
 - 5.1. Aspergillosis
 - 5.2. Cryptococcosis
 - 5.3. Zygomycosis
 - 5.4. Candidiasis
 - 5.5. Pseudallescheriasis
 - 5.6. Histoplasmosis
 - 5.7. Blastomycosis
 - 5.8. Coccidiomycosis
 - 5.9. Paracoccidiomycosis
6. Miscellaneous fungal or fungal-like diseases
 - 6.1. Rhinosporidiosis
 - 6.2. Lobomycosis
 - 6.3. Protothecosis
 - 6.4. Pythiosis
7. Antifungal Therapy
 - 7.1. Commonly used Antifungal agents
 - 7.1.1. Amphotericin B
 - 7.1.2. Fluconazole
 - 7.1.3. Itraconazole
 - 7.1.4. Voriconazole
 - 7.1.5. Posaconazole
 - 7.1.6. Caspofungin
 - 7.1.7. Nystatin
 - 7.1.8. Terbinafine and antifungals containing the 'allyl' group
 - 7.1.9. Topical antifungals
 - 7.2. In vitro Sensitivity Testing Procedures
8. Identification of fungi- The Classical Approach to Fungal Identification
 - 8.1. The steps involved in identifying a microfungus
 - 8.1.1. Macroscopic inspection after isolation on relevant media
 - 8.1.1.1. Yeasts
 - 8.1.1.2. Moulds
 - 8.1.2. Microscopic inspection
9. Serological testing

Lysine Biosynthesis In Bacteria – An Uncharted Pathway For Novel Antibiotic Design 146

Con Dogovski, Sarah C. Atkinson, Sudhir R. Dommaraju, Renwick C. J. Dobson, and Matthew A. Perugini, *Department of Biochemistry and Molecular Biology, Bio21 Molecular Science and Biotechnology Institute, University of Melbourne, Parkville, Victoria 3010, Australia*

Lilian Hor, *Department of Biochemistry and Molecular Biology, Bio21 Molecular Science and Biotechnology Institute, University of Melbourne, Parkville, Victoria 3010, Australia* School of Chemistry, *Bio21 Molecular Science and Biotechnology Institute, University of Melbourne, Parkville, Victoria 3010, Australia*

Craig A. Huton, *School of Chemistry, Bio21 Molecular Science and Biotechnology Institute, University of Melbourne, Parkville, Victoria 3010, Australia*

Juliet A. Gerrard, *School of Biological Sciences, University of Canterbury, Christchurch, New Zealand*

1. Introduction

2. Lysine Biosynthesis Pathway in Bacteria
3. Identification and Validation of Targets
4. Dihydrodipicolinate Synthase [DHDPS]
 - 4.1. Function of DHDPS
 - 4.1.1. Regulation of DHDPS activity
 - 4.2. Structure of DHDPS
 - 4.2.1. Subunit and quaternary structure of DHDPS
 - 4.2.2. Active site
 - 4.2.3. Tight dimer interface
 - 4.2.4. Weak dimer interface
 - 4.2.5. Allosteric site
 - 4.2.6. Alternative Quaternary Architectures
 - 4.3. Inhibition of DHDPS
5. Dihydrodipicolinate Reductase [DHDPR]
 - 5.1. Function of DHDPR
 - 5.1.1. Nucleotide Preference of Bacterial DHDPR
 - 5.2. Structure of DHDPR
 - 5.2.1. Subunit and quaternary structure of DHDPR
 - 5.2.2. Substrate Binding Site
 - 5.2.3. Nucleotide Binding Site
 - 5.3. Inhibition of DHDPR
6. Diaminopimelate (DAP) Epimerase
 - 6.1. Function of DAP epimerase
 - 6.2. Structure of DAP epimerase
 - 6.3. Inhibition of DAP epimerase
7. Conclusions

Antibody Based Protein Research In Human Pathology

167

C. Gulmann and C. Buckley, *Departments of Histopathology, Beaumont Hospital, Dublin, Ireland*
 R. Cummins, *Royal College of Surgeons, Dublin, Ireland*

1. Introduction
 - 1.1. Antigen-Antibody Interactions
2. Routine Antibody Based Methods in Pathology
 - 2.1. Immunohistochemistry in Histological Material
 - 2.1.1. Principles and History
 - 2.1.2. Antibodies
 - 2.1.3. Blocking Non-Specific Background
 - 2.1.4. Detection Systems
 - 2.1.5. Tissue Fixation, Processing and Antigen Retrieval
 - 2.2. Flow Cytometry
 - 2.3. Fluorescent Techniques
 - 2.3.1. Immunofluorescence
 - 2.3.2. ELISA
3. Novel Protein Investigation Techniques
 - 3.1. Protein Array Techniques
 - 3.1.1. Antibody Arrays
 - 3.1.2. 'Reverse Phase Arrays'
 - 3.2. Ancillary Methods in Protein Arrays
 - 3.2.1. Antibody Validation
 - 3.2.2. Tissue Microdissection
 - 3.2.3. Large Scale Validation – The Role of Tissue Microarrays
 - 3.2.4. Data Analysis of Large Data Sets
4. Problems in Antibody Based Methods
 - 4.1. Procurement of 'Specific' Antibodies
 - 4.2. Standardisation
 - 4.3. Increasing Throughputness
5. Conclusions and Future

Abzymes - A Challenge For The Medical Biotechnology And Public Health**184**I. Getov, *Department of Social pharmacy, Medical University – Sofia, Bulgaria*T. Argirova, *Department of Biochemistry, Sofia University "St. Kliment Ohridski", Bulgaria*

1. Introduction
2. Structure and Function Of Enzymes
3. Antibodies
4. Catalytic Antibodies
 - 4.1. The Abzymes
 - 4.2. Natural Catalytic Antibodies
 - 4.3. Catalytic Antibodies to HIV
5. Abzymes – A Challenge for Medical Biotechnology
6. Perspectives For Abzyme Technology As A New Branch Of Medical And Pharmaceutical Biotechnology

The Role of Phytobiotechnology in Public Health**202**Kenneth Anchang Yongabi, *Phytobiotechnology Research Foundation and Clinic, Bamenda, Cameroon*

1. Introduction: The Concept of Medicinal Plants and Phytobiotechnology
2. A Recap of Infectiology and Contemporary Challenges in the Control of Infectious Diseases
 - 2.1. Challenges involved in Controlling Infectious Diseases
 - 2.2. Synthetic Antibiotics in Health Care and their Shortfalls
 - 2.3. Applications of Medicinal Plant Biotechnology in the Control of Leishmaniasis and Dracunculiasis, Case Study: Northern Nigeria
 - 2.4. Medicinal Plants and Medicinal Plant Biotechnology in the Control of Mosquitoes (*Anopheles*) and Houseflies (*Musca Domestica*) in the Tropics
3. Medicinal Plants and Macrofungi in Control of Fungal Infections and Other Dermatological Problems
4. Employing Appropriate Medicinal Plant Biotechnology in the Management of HIV/AIDS And Cancer
 - 4.1. Role of Medicinal Plant Biotechnology in the Treatment of Cardiac and Neurological, Central Nervous System Disorder, Rheumatic Arthritis Etc
 - 4.2. Management Of Hepatitis, Cancers And Autoimmune Disorders Using Medicinal Plant Extracts
5. Medicinal Plant Biotechnology in Preventive Health
 - 5.1. Exploiting the Potentials of African Medicinal Plants and Indigenous Knowledge in Environmental Sanitation and Hygiene: Water Purification With Phytocoagulants
 - 5.2. A Preliminary Study on Disinfection of Fresh Human Excrements with Medicinal Plant Seeds, Kerosene and Saw Dust
6. Conclusions

Medical Biotechnology-Modern Development**233**Li Yang Hsu, *Department of Medicine, National University of Singapore, Singapore*Felicia Su Wei Teo, *Department of Respiratory & Critical Care Medicine, Singapore General Hospital, Singapore*Tan Min Chin, *Department of Hematology & Oncology, National University Hospital, Singapore*

1. Introduction
2. Diagnostics
 - 2.1. Nucleic Acid Tests
 - 2.1.1. Role in Infectious Diseases
 - 2.1.2. Role in Cancer
 - 2.1.3. Prenatal Screening and Pre-implantation Genetic Diagnosis
 - 2.2. Monoclonal Antibodies
 - 2.3. Proteomics for Diagnostics
 - 2.4. Nanodiagnosics
3. Therapeutics
 - 3.1. rDNA Drugs and Vaccines
 - 3.1.1. Bio-factories

- 3.1.2. Efficacy and Adverse Effects
- 3.2. Gene Therapy
 - 3.2.1. History and Development
 - 3.2.2. Barriers
- 3.3. Stem Cells
- 3.4. Rational Drug Design
- 4. Economics and Industry Trends
 - 4.1. Medical Biotechnology Market
 - 4.2. Industry Strategies
 - 4.3. Financing
 - 4.4. Market Forces and Beneficiaries
- 5. Regulation
 - 5.1. Drug Approval
 - 5.2. Research Regulation and Patents
- 6. Social Issues and Ethics
 - 6.1. Stem Cell Research
 - 6.2. Cloning
 - 6.3. Genetic Testing and Therapy
 - 6.4. Genetic Databases
 - 6.5. Health Inequities
- 7. Conclusion

Bioinformatics on Post Genomic Era: From Genomes to Systems Biology

255

Mauno Vihinen, *Institute of Medical Technology, University of Tampere, Finland and Research Unit, Tampere University Hospital, Tampere, Finland*

- 1. Introduction
 - 1.1. Implications of Genomes
- 2. Bioinformatics and Internet
- 3. Genomes
- 4. Databases
 - 4.1. Annotation
 - 4.2. Gene ontologies
 - 4.3. Data Mining
- 5. Sequence Alignment
- 6. Common Sequence Analysis Methods
 - 6.1. Gene Finding
 - 6.2. Mapping
 - 6.3. DNA/RNA Secondary Structure
 - 6.4. Primer Selection
 - 6.5. Translation
 - 6.6. Protein Analysis
 - 6.7. Pattern Searches
- 7. Functional Genomics
 - 7.1. Gene and Protein Expression
- 8. Protein Structure Predictions
- 9. Systems biology
- 10. Trends and Prospects

Gene Therapy

268

P. Lehtolainen, A.I.V. *Institute University of Kuopio Finland and University College London4, Department of Medicine, UK*

M.O. Laukkanen, A.I.V. *Institute University of Kuopio Finland and Medicity Research Laboratory, University of Turku, Finland*

S. Ylä-Herttua, A.I.V. *Institute A.I.V. Institute University of Kuopio Finland and Department of Medicine University of Kuopio and Gene Therapy Unit, Kuopio University Hospital, Kuopio, Finland*

1. Introduction
2. Vectors for Gene Transfer
 - 2.1. Non-viral Vectors
 - 2.2. Viral Vectors
 - 2.2.1. Adenoviral Vectors
 - 2.2.2. Retroviral and Lentiviral Vectors
 - 2.2.3. Adeno-associated Viral Vectors
 - 2.2.4. Other Viral Vectors
 - 2.2.5. Replicating Viral Vectors
3. Gene Delivery
 - 3.1. Ex Vivo Delivery
 - 3.2. In Vivo Delivery
 - 3.3. Pre-clinical Gene Therapy Experiments
4. Clinical Applications of Gene Therapy

Tissue Engineering: Advances in Organ Replacement

286

Lisa Riccalton-Banks, Andrew Lewis, Kevin Shakesheff, *School of Pharmaceutical Sciences, University of Nottingham, Nottingham, UK*

1. Introduction
2. The Skin
3. The Liver
4. Kidney
 - 4.1. The Bioartificial Kidney
 - 4.2. Tissue Engineering a Kidney
5. Bone
6. Blood Vessels
7. Skeletal Muscle
8. The Bladder
9. Nerve
10. Articular Cartilage
11. Cornea

The Nanostructure of the Nervous System and the Impact of Nanotechnology on Neuroscience

313

Gabriel A.Silva, *Departments of Bioengineering and Ophthalmology, and Neurosciences Program, University of California, San Diego, USA*

1. Introduction
2. The Micro- and Nanoscale Structure of the Central Nervous System (CNS)
 - 2.1. The organization of the CNS
 - 2.2. The cellular and molecular structure of the CNS
 - 2.3. Membrane proteins and receptors
 - 2.4. Example of the nanoengineered CNS: Self-assembly of the presynaptic particle web
3. Synthetic and Engineering Methods in Nanotechnology
4. Applications of Nanoengineering and Nanotechnology to the CNS
 - 4.1. Applications to Basic Neuroscience
 - 4.2. Applications to Clinical Neuroscience
5. Challenges Associated with Nanotechnology Applications to the CNS
6. Conclusions

VOLUME XII

TP53 Gene and P53 Protein as Targets in Cancer Management and therapy 1

Daniela Maurici, *International Agency for Research on Cancer, WHO, France*
 Pierre Hainaut, *International Agency for Research on Cancer, WHO, France*

1. Introduction
2. TP53 Mutations and Human Cancer
3. The p53 Protein—A Sensor of Genotoxic Stress
4. Gene Therapy Using TP53
 - 4.1. Replacement Gene Therapy
 - 4.1.1. Viral Delivery
 - 4.1.2. Non-viral Delivery
 - 4.2. E1B-defective Adenoviruses
5. The p53 Pathway as a Target for Pharmacological Intervention
 - 5.1. Restoration of Wild-type p53 Functions
 - 5.2. Modulation of Wild-type p53
 - 5.2.1. Use of Mdm2 Peptides to Stabilize Wild-type p53
 - 5.2.2. Biochemical Modulation of p53 Protein Activity
 - 5.2.3. Inhibiting Wild-type p53: Pifithrin
 - 5.3. Amifostine—A Drug that Targets the p53 Pathway
6. TP53 in Cancer Detection and Monitoring
 - 6.1. Auto Antibodies to p53
 - 6.2. Plasmatic Free TP53 DNA
7. Perspectives and Future Challenges

Plant-Made Vaccines- The Past, Present and Future 27

Amanda M. Walmsley, *School of Biological Sciences, Monash University, Australia*
 Dwayne D. Kirk, *Monash University, Australia*

1. Introduction
2. Traditional Vaccines
3. New Generation Vaccines
4. Plant-made Vaccines
5. Plant-made Vaccine History
6. The Successful Plant-made Vaccine
7. The Future
 - 7.1. Plant Expression Systems
 - 7.2. Processing of Plant Materials and Stability of Vaccines
 - 7.3. Intellectual Property, Freedom to Operate and Regulations
 - 7.4. Commercial Feasibility of Plant-made Vaccines

Transgenic Mice in Immunobiology 37

Harri Alenius, *Laboratory of Immunotoxicology, Finnish Institute of Occupational Health, Helsinki, Finland*

1. Introduction
2. Strategies to Generate Transgenic Mice
 - 2.1. Gene targeting with homologous recombination
 - 2.2. Cre/loxP System in Chromosomal Engineering
 - 2.3. Inducible Gene Expression with Tetracycline Transactivator System
 - 2.4. Gene Targeting by Inducible Activation System
 - 2.5. Tissue Specific Control of Gene Expression
3. Transgenic Mice and the Immune System
 - 3.1. RAG-Deficient Blastocyst Complementation
 - 3.2. Transgenic Mice in the Study of Immunological Diseases
 - 3.2.1. X-Linked SCID

- 3.2.2. Type I Diabetes
- 3.2.3. Allergic asthma
- 4. Future Perspectives

Nanomedicine and Medical Nanorobotics

59

Robert A. Freitas, *Institute for Molecular Manufacturing, USA*

- 1. Nanotechnology and Nanomedicine
- 2. Medical Nanomaterials and Nanodevices
 - 2.1. Nanopores
 - 2.2. Artificial Binding Sites and Molecular Imprinting
 - 2.3. Quantum Dots and Nanocrystals
 - 2.4. Fullerenes and Nanotubes
 - 2.5. Nanoshells and Magnetic Nanoprobes
 - 2.6. Targeted Nanoparticles and Smart Drugs
 - 2.7. Dendrimers and Dendrimer-Based Devices
 - 2.8. Radio-Controlled Biomolecules
- 3. Microscale Biological Robots
- 4. Medical Nanorobotics
 - 4.1. Early Thinking in Medical Nanorobotics
 - 4.2. Nanorobot Parts and Components
 - 4.2.1. Nanobearings and Nanogears
 - 4.2.2. Nanomotors and Power Sources
 - 4.2.3. Nanocomputers
 - 4.3. Self-Assembly and Directed Parts Assembly
 - 4.3.1. Self-Assembly of Mechanical Parts
 - 4.3.2. DNA-Directed Assembly
 - 4.3.3. Protein-Directed Assembly
 - 4.3.4. Microbe- and Virus-Directed Assembly
 - 4.4. Positional Assembly and Molecular Manufacturing
 - 4.4.1. Diamond Mechanosynthesis
 - 4.4.2. Massively Parallel Manufacturing
 - 4.5. Medical Nanorobot Designs and Scaling Studies
 - 4.5.1. Spirocytes
 - 4.5.2. Microbivores

Role of Xenobiotic Metabolism in Drug Discovery and Development

108

Paivi Taavitsainen, *University of Oulu, Finland*

Paavo Honkakoski, *University of Kuopio, Finland*

Risto Juvonen, *University of Kuopio, Finland*

Olavi Pelkonen, *University of Oulu, Finland*

Hannu Raunio, *University of Kuopio, Finland*

- 1. Introduction
- 2. General Aspects of Xenobiotic Metabolism
 - 2.1. Role of Metabolic Studies during Drug Development
 - 2.2. Overview of Drug Metabolising Enzymes
 - 2.3. CYP Enzymes involved in Xenobiotic Metabolism
 - 2.4. CYP3A4
 - 2.5. CYP Enzymes and Drug Development
- 3. Methods for Studying in vitro Metabolism
 - 3.1. Human Liver Microsomes
 - 3.2. Human Hepatocytes
 - 3.3. Permanent Cell Lines and Liver Slices
 - 3.4. cDNA-expressed Enzymes
- 4. Determination of Metabolism in in vitro Systems
 - 4.1. Metabolic Stability of an NCE

- 4.2. Identification of Metabolites and Metabolic Routes
- 4.3. Identification of CYPs Metabolising an NCE
- 4.4. Utilisation of CYP-selective Chemical Inhibitors
- 4.5. Utilisation of CYP-specific Antibodies
- 4.6. cDNA-expressed CYPs
- 4.7. Correlation Analysis
- 4.8. Measures of Affinities of an NCE for CYPs
- 4.9. High-throughput Screening in Drug Metabolism
5. In vitro - in vivo Scaling of an NCE
 - 5.1. Apparent Enzyme Kinetic Parameters K_m and V_{max}
 - 5.2. Prediction of the Intrinsic Clearance (Cl_{int})
 - 5.3. Extrapolation of Cl_{int} to in vivo clearance in the whole organism
 - 5.4. Apparent K_i and Type of Inhibition
 - 5.5. Prediction of Drug-drug Interactions
6. Induction of CYP Enzymes
 - 6.1. Mechanisms of Induction for Major Drug-metabolising CYPs
 - 6.2. Species and Inter-individual Differences in Induction
 - 6.3. Assay systems for Induction
7. Modelling of CYP Enzymes
8. In Vitro versus in Vivo
9. Conclusions

From Gene to Clinical Product: An Overview of GMP Requirements Associated to the Development of New Biotherapeutics, in a Multiprocess/Multiproduct Facility

137

Jean-François POLLET, *Henogen sa, University of Brussels, Belgium*

Alex BOLLEN, *Henogen sa / Applied Genetics, University of Brussels, Belgium*

1. Introduction
2. Basic requirements for a State-of-the-Art Biopharmaceutical Development Facility
 - 2.1. The quality management concepts and the current Good Manufacturing Practice (cGMP)
 - 2.1.1. *Quality Assurance [QA]*
 - 2.1.2. *Current Good Manufacturing Practice for medicinal product [cGMP]*
 - 2.1.3. Quality Control [QC]
 - 2.2. Design of building, facilities and equipment
 - 2.3. Organisation and management of documentation for pharmaceutical development and cGMP
 - 2.3.1. Manufacturing formulae and specifications
 - 2.3.2. Procedures
 - 2.3.3. Instructions
 - 2.3.4. Records
 - 2.4. Personnel training requirements
 - 2.5. Validation contingencies in pharmaceutical production
 - 2.5.1. Design Specification [DS]
 - 2.5.2. Installation Qualification [IQ]
 - 2.5.3. Operational Qualification [OQ]
 - 2.5.4. Performance Qualification [PQ]
3. General considerations for a multi-process/multi-product biotech manufacturing facility
 - 3.1. Design of a multi-process/multi-product facility and prevention of cross-contamination
 - 3.2. Personnel, material, product and waste flows
 - 3.3. HVAC system requirements for biotech multi-product facilities
 - 3.4. Biosafety requirements
 - 3.5. Decontamination and cleaning
4. Requirements for manufacture and quality control of investigational medicinal products derived by biotechnological processes
 - 4.1. Control of starting materials
 - 4.2. Seed lot and cell bank system
 - 4.3. Fermentation, or cell culture, and harvesting
 - 4.4. Extraction, purification and downstream processing

- 4.5. Filling/packaging operations, control of final product and batch release
- 4.6. Stability considerations and storage
- 4.7. Pre-clinical safety evaluation
5. Conclusions

The Impact of Patents on Medical Biotechnology 166

Dianne Nicol and Jane Nielsen, *Centre for Law and Genetics, Law Faculty, University of Tasmania, Australia*

1. Introduction
2. Key features of patent law
3. Restrictions on use of gene and research tool patents
4. Increasing complexity of the patent landscape
5. Social policy considerations in the healthcare arena
6. Social policy considerations in the public sector research arena
7. The way forward
8. Conclusions

Biofilm of Medical Importance 182

Morten Alhede, *Department of Systems Biology, Technical University of Denmark, DK*

Peter Ø. Jensen, *Department of Clinical Microbiology, Rigshospitalet, DK.*

Michael Givskov and Thomas Bjarnsholt, *Department of International Health, Immunology and Microbiology, Faculty of Health Sciences, University of Copenhagen, DK*

1. Introduction
2. The Structure of Biofilms
3. Tolerance to Antimicrobials
4. Lung Infection
5. Wound Infection
7. Chronic Otitis Media
8. Foreign Body Implants / Tissue Fillers
9. Treatment of Biofilm Infected CF Lungs
10. Conclusion

Human Genetic Data Banks: From Consent to Commercialization - An Overview of Current Concerns and Coundrums 198

Lori Luther and Trudo Lemmens, *Faculty of Law, University of Toronto, Canada*

1. Introduction
2. Types of Biobanks: Population Banks vs. Disease Specific Banks
 - 2.1. Types of Banks
 - 2.1.1. Population Biobanks
 - 2.1.2. Specific Disease Banks
3. Legal and Ethical Issues in the Establishment and Use of Biobanks: How to Reconcile Autonomy with the Existence of Common Interests?
 - 3.1. Consent
 - 3.1.1. Types of Consent
 - 3.1.1.1. General and Specific Consent
 - 3.1.1.2. Presumed and Prior Informed Consent
 - 3.1.1.3. Individual and group consent
 - 3.1.2. Alternatives to Consent
 - 3.1.2.1. Informed Permission/Authorization
 - 3.1.2.2. A 2-step process
 - 3.1.2.3. Co-mingling of broad and specific consent
 - 3.1.3. Public Consultation as a Middle Ground to Consent

- 3.1.4. Exceptions to Consent – Including but not Limited to Research
- 3.2. Confidentiality
- 3.3. Privacy
- 3.4. Duty To Warn Family Members
- 3.5. Access
 - 3.5.1. Participant Access
 - 3.5.2. Researcher Access
 - 3.5.3. Third-Party Access
 - 3.5.3.1. Family Members
 - 3.5.3.2. Insurers
 - 3.5.3.3. Employers
 - 3.5.3.4. Participants Physicians
 - 3.5.3.5. The State
- 3.6. Genetic Discrimination
- 4. Commercialization of Genetic Data: Common Heritage of Humanity vs. Private Interests?
 - 4.1. Commercialization
 - 4.2. Benefit Sharing
 - 4.3. Ownership
 - 4.3.1. Population Banks
 - 4.3.2. Private Banks
 - 4.3.3. Case Law
- 5. Public Involvement: Can or Should Researchers and Participants be Partners?
- 6. Conclusion

The Status of the Extracorporeal Embryo [Stem Cells]

233

H. Nys, Brant Hansen, *Centre for Biomedical Ethics and Law, Department of Public Health, Faculty of Medicine, Catholic University of Leuven, Belgium*

- 1. The Legal Situation
 - 1.1. The embryo in vitro
 - 1.1.1. Introduction
 - 1.1.2. History of the Embryo Law: European conformity
 - 1.1.3. Definition of the extracorporeal embryo
 - 1.1.4. Research on supernumerary embryos
 - 1.1.5. Creation of embryos solely for research purposes
 - 1.1.6. Prohibitory clauses
 - 1.2. Medically Assisted Procreation
 - 1.3. The embryo in vivo
 - 1.3.1. Termination of pregnancy by a physician
 - 1.3.2. Evaluation of the application of the law
- 2. Ethical evaluation: The Belgian (federal) Council on Bioethics
 - 2.1. Human reproductive cloning
 - 2.2. Research on human embryos in vitro
 - 2.3. Sex selection
- 3. Factual Material
 - 3.1. Demographic Structure
 - 3.2. Medically Assisted Reproduction
 - 3.3. Reproductive Tourism
 - 3.4. Termination of pregnancy
 - 3.5. On the limits of biomedicine

Bioterrorism by Biotechnology: Implications for Clinical Medicine

251

Gifty Immanuel, *Department of Medical Virology, Center for AIDS and Antiviral Research, 37 Tenth Street, Tooveypuram, Tuticorin, Tamilnadu, INDIA*

- 1. Introduction

2. Biotechniques in Bioweaponering
 - 2.1. Genetic Engineering
 - 2.2. Synthetic Biology
 - 2.3. Nanotechnology
 - 2.4. Dual Agent Fabrication
 - 2.5. Bioregulators Production
 - 2.6. Toxin Synthesis
 - 2.7. Transgenesis
 - 2.8. Genome Sequencing
3. Counter Strategies in Clinical Medicine
 - 3.1. Electron Microscopy
 - 3.2. Genomics, Proteomics and Microarrays
 - 3.3. Biosensors
 - 3.4. Syndromic Surveillance
 - 3.5. Radiation and Chemical Inactivation
 - 3.6. Phage Therapy
 - 3.7. Immunostimulants, Modulators and Enhancers
 - 3.8. Gene Silencing and Gene therapy
 - 3.9. Monoclonal Antibodies and Molecular Decoys
 - 3.10. Nanobiotechnology
 - 3.11. Serum Therapy and Biotherapy
 - 3.12. Vaccines, Antitoxins and Toxoids
 - 3.13. Hemodialysis, Hemofiltration and Plasmapheresis
 - 3.14. Edible Vaccine and Plantibodies
4. Conclusion

HumanF Papillomavirus-Mediated Transformation of The Anogenital Tract	269
<i>Renske D.M. Steenbergen, Department. Of Pathology, VU University Medical Center, De Boelelaan 1117, 1081 HV Amsterdam, The Netherlands.</i>	
<i>Jillian de Wilde, Department. Of Pathology, VU University Medical Center, De Boelelaan 1117, 1081 HV Amsterdam, The Netherlands.</i>	
<i>Saskia M. Wilting, Department. Of Pathology, VU University Medical Center, De Boelelaan 1117, 1081 HV Amsterdam, The Netherlands.</i>	
<i>Antoinette A.T.P. Brink, Department. Of Pathology, VU University Medical Center, De Boelelaan 1117, 1081 HV Amsterdam, The Netherlands.</i>	
<i>Peter J.F. Snijders, Department. Of Pathology, VU University Medical Center, De Boelelaan 1117, 1081 HV Amsterdam, The Netherlands.</i>	
<i>Chris J.L.M. Meijer, Department. Of Pathology, VU University Medical Center, De Boelelaan 1117, 1081 HV Amsterdam, The Netherlands.</i>	

1. HPV in anogenital cancers
2. HPV and cervical cancer development
3. HPV-mediated transformation: additive events
4. Deregulation of E6 and E7 transcription
5. E6 and E7, the viral oncogenes
6. HPV-mediated immortalization
7. Telomerase activation
8. Chromosomal alterations
9. Epigenetic alterations in cervical cancer
10. Concept of multistep process of HPV-mediated carcinogenesis and future perspectives

VOLUME XIII

Social, Educational and Political Aspects of Biotechnology - An Overview and an Appraisal of Biotechnology in a Changing World 1Colin Ratledge, *Department of Biological Sciences, University of Hull, Hull, UK*

1. Science and the Public
2. Biotechnology and the Public
3. Biotechnology and Genetically Modified Crops
4. GM Foods and the Media
5. GM Foods: The Lessons Learnt
6. Biotechnology and its Impact on the Public Understanding of Science
7. Biotechnology and the Ethics of Gene Therapy, Animal Cloning and Gene Manipulation in Humans

Some Social, Educational and Political Aspects of Biotechnology 19Ian A. Pownall, *Scarborough Centre for Business and Leisure Management (SCBLM), Hull University, Scarborough, UK*

1. Introduction
2. The Developing Country Identity
3. Analyzing the Impact of Biotechnology
4. Methodological Approaches and Competing Discourses
5. Rhetoricism and Debate
6. The diplomacy model and environmental discourses
7. An international Political Economic Discourse
8. Conclusion

Public Policy Responses to Biotechnology 47Philipp Aerni, *University of Harvard, USA*
Peter Rieder, *Swiss Federal Institute of Technology (ETH), Switzerland*

1. Introduction
2. Challenges for the Biotechnology Industry
3. Reasons for the Lack of Public Acceptance
4. Some theoretical considerations regarding public confidence
5. Public Policy Issues related to Biotechnology
6. Some Reflections on Future Public Policy Towards Biotechnology

Inventions, Patents and Morality 71Darryl R. Johnson Macer, *Regional Unit for Social and Human Sciences in Asia and the Pacific (RUSHSAP), UNESCO Bangkok, 920 Sukhumvit Road, Prakanong, Bangkok 10110, Thailand*

1. Introduction
2. Intellectual Property Protection
3. Ethical and Moral Issues
4. Moral Arguments Supporting Patenting
5. Ethical Arguments Against Patenting
6. Rewarding Historical Innovation
7. Morality Exclusion of Patents
8. Conclusions and Predictions

The Regulation of Genetically Modified Food 89Sue. J. Mayer, *Gene Watch UK, UK*

1. Introduction
2. Process versus product regulation and the risks of GMOs
 - 2.1. The risks of genetically modified organisms to the environment
 - 2.2. The risks of genetically modified organisms to the human health
 - 2.3. Discussion
3. Regulating the Laboratory Use of GMOs
 - 3.1. U.S.A.
 - 3.2. Europe
 - 3.3. Discussion
4. Regulating the Release of GMOs to the Environment
 - 4.1. U.S.A.
 - 4.2. Europe
 - 4.3. Rest of the World
 - 4.4. The Cartagena Protocol on Biosafety
 - 4.5. Discussion
5. GM Food Safety Regulations
 - 5.1. U.S.A.
 - 5.2. Europe
 - 5.3. Discussion
6. Labelling
 - 6.1. U.S.A.
 - 6.2. Europe
 - 6.3. Discussion
7. Trade and GM food regulations
8. Conclusions

Biotechnology Education

107

Gustavo Viniestra-Gonzalez, *Universidad Autonoma Metropolitana - Iztapalapa, México*

1. Introduction
 - 1.1. General Considerations
 - 1.2. The Importance of Basic Knowledge in The Twenty-First Century
 - 1.3. Definition and Scope of Biotechnology
 - 1.4. The Practical Link between Basic Science and Biotechnology
 - 1.5. Relations between Higher Education, Technological Innovation and Economic Development
2. Teaching the Basic Principles of Biotechnology
 - 2.1. Qualitative vs. Quantitative Principles of Biotechnology
 - 2.2. How to Teach Scientific Principles: Basic vs. Applied Approaches
 - 2.3. Allometry: A General Scale-up Principle of Biology
 - 2.4. Computers and Functional Scientific Illiteracy
3. Teaching the Skills of Biotechnology
 - 3.1. Bioprocess Engineering, a New Trend in Biotechnology
 - 3.2. Skills for Scaling-up or Scaling-down Bioprocesses
 - 3.3. Bioprocess Engineering in Developing Countries
 - 3.4. Bioprocess Engineering for Fine Products
 - 3.5. Qualitative vs. Quantitative Skills in Biotechnology
 - 3.6. The Importance of Reasoning and Common Sense
 - 3.7. Academic and on-the Job Training
 - 3.8. The Need to Teach Skills on Computation and Informatics
 - 3.9. Integration of Skills
4. Teaching Values and Attitudes in Biotechnology
 - 4.1. The Importance of Values and Attitudes in Biotechnology Education
 - 4.2. The Issues of Technology as a Sensible or a Dangerous Path for Development
 - 4.3. How to Teach Values and Attitudes
5. General Discussion
 - 5.1. The Need for Integration in Biotechnology Education
 - 5.2. Integration in Undergraduate Programs

- 5.3. Integration in Graduate Programs
- 5.4. A Brief Note on Scientific Cooperation

Biotechnology in Rural Area

143

Li Kangmin, *Asian Pacific Regional Research and Training Center for Integrated Fish Farming, China*

1. Introduction
 2. Advanced Biotechnological Achievements Applied in Rural Areas
 - 2.1. Gene Engineering
 - 2.2. Transgenic Cotton
 - 2.3. Transgenic Rice
 - 2.4. Transgenic Rape-Seed
 - 2.5. Transgenic Fish
 - 2.6. Transgenic Animal and Bio-Pharmaceuticals
 3. Conventional Biotechnology as Practiced in Rural Areas
 - 3.1. Rice Heterosis Exploitation
 - 3.2. Induced Breeding of Fish
 - 3.3. Fish Hybridization
 - 3.4. Integrated Bio - Systems (IBS)
 - 3.4.1. Integrated Bio Systems Using Organic Matter in Multi -Trophic Levels in Food Chain in Material Cycle/Recycle and Energy Flow
 - 3.4.1.1. Biogas-digester subsystem
 - 3.4.1.1.1. Why Develop Biogas?
 - 3.4.1.1.2. Biogas Producing Processes
 - 3.4.1.1.3. Many Uses of Biogas
 - 3.4.1.1.4. Uses of Bio-Slurry and Bio-Sludge
 - 3.4.1.1.5. Biogas, The Basis of Eco-Economy
 - 3.4.1.2. Constraints and Prospects
 - 3.4.1.3. Earthworm Culture Subsystem
 - 3.4.1.4. Mushroom Cultivation Subsystem
 - 3.4.2. Integrated Biomass Systems Using Mutualism Principles
 - 3.4.2.1. Inter-cropping to apply the principle of Allelopathy
 - 3.4.2.2. Stereo Agriculture – Vertical Stratified Agriculture (Pond Dike System)
 - 3.4.3. Integrated Biomass Systems Using Genetically Engineered Bacteria
 - 3.4.4. Integrated Biomass Systems Using Bio Extraction of Bio Resources
 - 3.4.4.1. Enzyme Agents
 - 3.4.4.2. Mono Cell Protein
 - 3.4.4.3. Disease Resistant Crop Yield-Increasing Agent
 - 3.5. Biological Control
4. Socioeconomic, Political and Cultural Impacts on Biotechnology
 - 4.1. Economic Systems and Biotechnology
 - 4.2. Bio-Diversity and Biotechnology
 - 4.3. Pharmaceutical biotechnology and traditional Chinese culture
 - 4.4. Qinghaosu
 - 4.5. Urbanization and Biotechnology
 - 4.6. Ethical Principles and Biotechnology

Art, Biotechnology and the Culture of Peace

179

Edgar J. DaSilva, *Former Director Division of Life Sciences, INSULA, UNESCO House, France*

1. Introduction
2. Biotechnology - Ancestral Art and Culture
 - 2.1. Fermentation technology and art
 - 2.2. Fermented foods and culture
3. Zero-Emission Biotechnology and Environmental Art
4. Microbes and Cultural Heritage

5. Biotechnology and Art
 - 5.1. Biotechnology and cover art
 - 5.2. Bioart
 - 5.3. Making the invisible visible and conservation of microbial heritage
 - 5.4. Biotechnology in Literature, Cinema and TV
 - 5.5. Medicine and art
 - 5.6. Music and microbes
6. Education and art
7. The Dark Side of Biotechnology - Culture and Peace
8. The Developing Countries and Biotech Art
9. Concluding Remarks
10. Dedication

About EOLSS **233**

VOLUME XIV

Why Genetic Modification Arouses Concerns: Social, Cultural and Political Impacts	1
<i>Richard Braun, BIOLINK, Bern, Switzerland</i>	

1. Introduction
 - 1.1. The public perception of new technologies
 - 1.2. The status of applications of genetic modification
2. How to Know about Concerns
 - 2.1. Surveys
 - 2.2. Media reports
 - 2.3. Consultations
 - 2.4. Public votes on the application of genetic modification
3. What are the Concerns
 - 3.1. Human health
 - 3.2. Environment
 - 3.3. Ethics
 - 3.4. Economics
4. Cultural Roots of the Concerns
 - 4.1. Lack of understanding the science
 - 4.2. Education
 - 4.3. Naturalness
 - 4.4. Religion
5. Political Factors Contributing to the Concerns
 - 5.1. Governments and Government Agencies
 - 5.2. Industry
 - 5.3. Farmers
 - 5.4. NGOs
6. Ways Forward: Dialogue
 - 6.1. Contributions by industry
 - 6.2. Contributions by Scientists and the Media
 - 6.3. Contributions by the Political Arena
 - 6.4. Contributions by Science Organisations

Gender Relations in Local Plant Genetic Resource-Mangement and Conservation	20
--	-----------

Patricia Louise Howard-Borjas, Department of Social Sciences, Wageningen University, The Netherlands
Willemijn Johanna Maria Cuijpers, Department of Social Sciences, Wageningen University, The Netherlands

1. General Background
 - 1.1. Gender Relations and Gender Bias
 - 1.2. What is Conserved is Related to Who Conserves
2. Patterns in Relief: Women's Knowledge and Management of Plant Genetic Resources
 - 2.1. Woman, the Housewife
 - 2.2. Woman, the Gatherer
 - 2.3. Woman, the Gardener
 - 2.4. Woman, the Herbalist
 - 2.5. Woman, the Seed Custodian
 - 2.6. Woman, the Plant Breeder
3. Behaviors in Relief: the Practice and Consequences of Gender Bias
 - 3.1. Women's Rights to Plant Genetic Resources
 - 3.2. Gender Bias in Ethnobotany and Related Sciences
 - 3.3. Gender, Biodiversity Loss, and Conservation
4. Needs in Theory and Practice

Biowarfare and Bioterrorism: The Dark Side of Biotechnology

59

Edgar J. DaSilva, *Section of Life Sciences, Division of Basic and Engineering Sciences, UNESCO, Paris, France*

1. Introduction
2. Biological/Chemical Warfare Characteristics
3. Bioweapons
4. Bioterrorism
5. Control, Monitoring and Reporting Systems
6. Conclusion

Social Factors in the Treatment and Reuse of Organic Wastes in Developing Countries

107

Christine Furedy, *Urban Studies, York University Canada*

Hanns-Andre Pitot, *Verband zur Förderung angepasster, sozial- und umweltverträglicher Technologien e.V., Waldburgstr, Stuttgart, Germany*

1. Introduction: Attitudes, behaviours and technology for organic waste reuse
 - 1.1. Variety of organic wastes or residues
 - 1.2. Reactions to wastes
2. Household and community-scale action for treatment and reuse
 - 2.1. Compost latrines
 - 2.2. Urban-waste-derived compost and vermicompost
 - 2.3. Biogas digesters
3. Technology choice, behavioural change and institutional supports
4. Conclusion

Potentials of Bioenergy from the Sago Industries in Malaysia

124

Kopli.B.Bujang, *Department of Resource Biotechnology, Faculty of Resource Science and Technology University Malaysia Sarawak, Kota Samarahan, Sarawak, Malaysia*

1. Introduction
2. Starch Industries
3. The Sago Palm
4. Production of Bio-Ethanol
 - 4.1. Hydrolysis of Sago Starch
 - 4.2. Justification of Bioethanol Production
 - 4.3. Ethanol Fermentation Process
5. Waste Production and Management
 - 5.1. Liquid waste
 - 5.2. Solid waste

6. Prospects and Problems

The Pacific Islands: A Natural Treasurehouse Of Bioresources and Island Biotechnology 137

Edgar J. DaSilva, *International Scientific Council for Island Development (INSULA), Paris, France*
 Murukesan V. Krishnapillai, *Agricultural Experiment Station, College of Micronesia-FSM, Federated States of Micronesia*

1. Introduction
2. The Pacific Region and Medicinal Plants
3. Aboriginal and Maori Medicine
4. Pacific Island Medicinal Plants and Intellectual Property Rights
5. Safety
6. Biodiversity trade in the contemporary Pacific
7. Trade considerations - Green pharmaceuticals
8. Gender
9. Kava and Nonu
 - 9.1. Kava
 - 9.2. Nonu
10. Conclusion

Index 213

About EOLSS 217

VOLUME XV**The Role of Microbial Resources Centers and UNESCO in the Development of Biotechnology 1**

Horst W. Doelle, *MIRCEN-Biotechnology, Australia*
 Faustino Sineriz, *Institute of Microbiology, University of Tucuman, Argentina*

1. Preliminary History
2. UNESCO and GIAM
3. MIRCEN
 - 3.1. Culture Collection MIRCENS
 - 3.2. Biological Nitrogen Fixation [BNF] MIRCENS
 - 3.3. Biotech MIRCENS
 - 3.4. Aquaculture and Marine Biotech MIRCENS
 - 3.5. Bioinformatic MIRCENS
 - 3.6. UNESCO-MIRCEN Fellowship Programme
 - 3.6.1. UNESCO Mircen Fellowships
 - 3.6.2. Special Project Unesco/Africa Fellowships
 - 3.6.3. Biotechnology - Women, Science and Technology Fellowships
 - 3.6.4. UNESCO/Ipalac Fellowships
 - 3.6.5. Nitrogen Fixation Fellowships
 - 3.6.6. Mircen Molecular Microbiology Fellowships
 - 3.6.7. UNESCO/ASM Fellowships
 - 3.6.8. UNESCO/IUMS/SGM Fellowships
 - 3.7. UNESCO/MIRCEN Professorship Scheme
 - 3.8. UNESCO-ASM Visiting Resource Person Program--The American Society For Microbiology-UNESCO Joint Program: Visiting UNESCO-ASM Resource Person Program
 - 3.9. NAS/ASM/MIRCEN Program
 - 3.10. UNESCO Support for Launch of the ASM Global Outreach Programme
 - 3.11. World Journal of Microbiology and Biotechnology
 - 3.12. Digital Education and Research In Biotechnology
4. Population Growth and Food Production

5. Biotechnology Education and Training Centers [BETCEN]
 - 5.1. Marine Biotechnology Betcen at Ocean University Of Qingdao, Qingdao, People's Republic of China
 - 5.2. Plant Biotechnology Betcen At Agricultural Biotechnology Centre, Godollo, Hungary
 - 5.3. Plant Biotechnology Betcen At Bethlehem University, Bethlehem, Palestine Territory Via Israel
 - 5.4. Plant Biotechnology Betcen At Centro De Investigacion Y De Estudios Avanzados Del L.P.N., Irapuato - Leon, Mexico
 - 5.5. Plant Biotechnology Betcen At Vegetable And Ornamental Plant Institute, Agricultural Research Centre, Private Bag X293000 Pretoria, South Africa
6. Conclusion

Biotechnological Activities of the MIRCENs History, Training and Research until 2002 28

Horst W. Doelle, *MIRCEN-Biotechnology, Australia*

Faustino Sineriz, *Institute of Microbiology, University of Tucuman, Argentina*

1. Introduction
2. Biological Nitrogen Fixation [BNF] MIRCENs
 - 2.1. Rhizobium MIRCEN Porto Alegre in Brazil
 - 2.1.1. Introduction
 - 2.1.2. Activities of MIRCEN Porto Alegre
 - 2.2. Rhizobium MIRCEN Nairobi in Kenya
 - 2.2.1. Introduction
 - 2.2.2. Legume Niches in Farming Systems
 - 2.2.3. Is the Technology Available?
 - 2.2.4. Possibilities for Strengthening the Impact of Agrobiotechnologies to the Small-hold Farmers
 - 2.3. Rhizobium MIRCEN Dagar in Senegal
 - 2.3.1. History
 - 2.3.2. Achievements
 - 2.4. Rhizobium MIRCEN Beltsville in USA
 - 2.4.1. Introduction
 - 2.4.2. Staff and Training
 - 2.4.3. Culture Collection Activities
 - 2.5. NIFTAL MIRCEN Pala in Hawaii, USA
3. Culture Collection MIRCENs
 - 3.1. Culture Collection and Patents MIRCEN Brussels in Belgium
 - 3.1.1. International Cooperation Activities of the Belgian Coordinated Collections of Microorganisms (BCCM) Consortium
 - 3.1.2. BCCM International Cooperation Policy and Activities
 - 3.2. Culture Collection and Patents MIRCEN Braunschweig in Germany
 - 3.2.1. Basic Description of the Infrastructure
 - 3.2.2. Quality of the Infrastructure
 - 3.2.3. Education & Training
 - 3.3. Culture Collection and Patent MIRCEN Budapest in Hungary
 - 3.4. Enteric Diseases MIRCEN Calcutta in India
 - 3.4.1. Activities
 - 3.4.2. Future Plans
 - 3.5. Culture Collection MIRCEN London in UK
 - 3.5.1. Basic Description of the Infrastructure
 - 3.5.2. Overview
 - 3.5.3. Molecular Identification Services Unit
 - 3.5.4. Service Activities
 - 3.5.5. Outputs
 - 3.5.6. Research and Development
 - 3.5.7. Teaching and Training
 - 3.6. Mycology MIRCEN Egham in UK
 - 3.6.1. Activities
 - 3.6.2. Some recent achievements

- 3.7. Culture Collection and Patent MIRCEN ATCC Manssassis in USA
4. Biotechnology MIRCENs
 - 4.1. S.M. de Tucuman in Argentina
 - 4.1.1. Background
 - 4.1.2. Training courses
 - 4.1.3. Some of the MIRCEN activities in recent years
 - 4.2. Biotechnology MIRCEN Brisbane and Pacific Region
 - 4.2.1. Australian Collection of Microorganisms
 - 4.2.2. Research
 - 4.2.3. Pacific Regional Network
 - 4.2.4. Future Plans
 - 4.3. Biotechnology MIRCEN Waterloo in Canada
 - 4.3.1. Biochemical Engineering, Industrial Biotechnology, Environmental Management
 - 4.4. Microbial Technology MIRCEN Beijing in China
 - 4.4.1. Beijing MIRCEN Activities during 1996-2001, with support from UNESCO, UNEP, and ASM
 - 4.5. Biotechnology MIRCEN Cairo in Egypt
 - 4.5.1. Background
 - 4.5.2. Objectives
 - 4.5.3. Activities
 - 4.5.4. Future View
 - 4.6. Biotechnology MIRCEN Guatemala City in Guatemala
 - 4.6.1. Introduction
 - 4.6.2. Activities in the year 2000
 - 4.6.3. Activities for the year 2001
 - 4.7. Bioconversion Technology MIRCEN Hong Kong in China
 - 4.7.1. Introduction
 - 4.7.2. Training
 - 4.7.3. Research
 - 4.8. Biotechnology MIRCEN Teheran in Iran
 - 4.8.1. Biotechnology Research Centre
 - 4.8.2. The Persian Type Culture Collection and Tehran MIRCEN
 - 4.8.3. Major Scientific Achievements of the Centre
 - 4.9. Fermentation Technology MIRCEN Osaka in Japan
 - 4.9.1. Introduction
 - 4.9.2. MIRCEN Osaka (Fermentation)
 - 4.9.3. Research Collaboration through JSPS Core University Programme
 - 4.9.4. Training young scientists in Asia through the International Post-graduate University course in Microbiology
 - 4.9.5. Education in the Graduate School, Osaka University
 - 4.10. Industrial Biotchnology MIRCEN Bloemfontein in South Africa
 - 4.10.1. Objectives
 - 4.11. Fermentation, Food and Waste Recycling MIRCEN Bangkok in Thailand
 - 4.11.1. Culture Collection
 - 4.11.2. Training
 - 4.11.3. Research
 - 4.11.4. Thailand's Potential Contribution To Future Cooperation
 - 4.12. Microbial Biotechnology MIRCEN St Augustine in Trinidad and Tobago
 - 4.12.1. Current Areas Of Research
 - 4.12.2. Future Plans
 - 4.13. Biotechnology MIRCEN Sittingborne in UK
 - 4.13.1. Introduction
 - 4.13.2. Conclusions
 - 4.13.3. Other MIRCEN Activities
 - 4.13.4. The Future
5. Aquaculture and Marine Biotechnology MIRCENs
 - 5.1. Aquaculture MIRCEN Mumbai in India
 - 5.1.1. Training Program

- 5.1.2. Other Activities
- 5.2. Aquaculture MIRCEN Sede Boqer in Israel
 - 5.2.1. Training
 - 5.2.2. Courses
- 5.3. Marine Biotechnology MIRCEN Baltimore in USA
- 5.4. The Microbial Gene Prospecting MIRCEN (San Jos, Costa Rica)
 - 5.4.1. Introduction
 - 5.4.2. Activities
 - 5.4.3. Microbial Biodiversity
 - 5.4.4. Microbial Ecology
 - 5.4.5. Gene Prospecting
- 5.5. Marine Biotechnology MIRCEN Mangalore in India
 - 5.5.1. History
 - 5.5.2. Achievements of Mangalore MIRCEN
- 6. Bioinformatics MIRCENS
 - 6.1. BITES MIRCEN Ljubljana in Slovenia
 - 6.1.1. International Centre for Chemical Studies ICCS
 - 6.1.2. UNESCO-MIRCEN-BITES Program
 - 6.2. Bioinformatics MIRCEN Stockholm in Sweden
 - 6.3. WFCC MIRCEN Shizuoka in Japan
 - 6.3.1. Introduction
 - 6.3.2. On-line registration and updating
 - 6.3.3. e-Workbench
 - 6.3.4. Future Prospects

Biological Nitrogen Fixation

104

James Kahindi, *United States International University, Nairobi, Kenya*

Nancy Karanja, *Regional Coordinator Sub Saharan Africa, Urban Harvest-CGIAR System-wide Initiative on Urban and Peri-urban Agriculture, Nairobi, Kenya*

Mamadou Gueye, *ISRA-MICEN/Laboratoire Commun de Microbiologie (LCM) IRD-ISRA-UCAD, Dakar, Senegal*

1. Introduction
2. Nodulation: From the Infection Process to the Functioning of the Nitrogenase
 - 2.1. Nodule Formation
 - 2.2. Functioning of the Nitrogenase
 - 2.3. Assimilation of Fixed Nitrogen
3. Measurement: Different Methods to Monitor the Nitrogen Fixation
 - 3.1. Why Measure Nitrogen Fixation?
 - 3.2. Methods for Estimating N₂ Fixation
 - 3.2.1. The Acetylene Reduction Technique
 - 3.2.2. The Nitrogen-Difference Technique
 - 3.2.3. The Xylem Solute Technique
 - 3.2.4. The ¹⁵N Isotope Techniques
 - 3.2.4.1. The Isotope Dilution (ID)
 - 3.2.4.2. The A Value
 - 3.2.4.3. The Natural Abundance
4. Improvement: Description of Different Approaches Allowing Maximization of Nitrogen-Fixation
 - 4.1. Selection of Superior Plant Genotypes
 - 4.2. Selection of Elite Rhizobial Strains
 - 4.3. Rhizobial Inoculant Production and Quality Control

History and Achievements of the Culture Collection and Patent MIRCEN Braunschweig [Germany]

119

Dagmar Fritze, *DSMZ - Deutsche Sammlung von Mikroorganismen und Zellkulturen German Collection of Microorganisms and Cell Cultures, Germany*

1. Introduction
2. The Early Days of DSM
3. Further Development
4. History of DSM with Regard to its Patent Depository
5. MIRCEN activities of DSM in these early years
6. Present Organisation and Status of DSMZ
7. The OECD initiative on Biological Resource Centres (BRC-Initiative)
8. Future Development

The *Ex Situ* Conservation of Microorganisms: Aiming at a Certified Quality Management 137

David Smith, *CABI Europe-UK, Bakeham, Lane, Egham, Surrey TW20 9TY, UK*

Matthew J. Ryan, *CABI Europe-UK, Bakeham, Lane, Egham, Surrey TW20 9TY, UK*

Erko Stackebrandt, *DSMZ-German Collection of Microorganisms and Cell Cultures GmbH, 38124, Braunschweig, Germany*

1. Introduction
2. Towards a Global Network
 - 2.1. The World Federation for Culture Collections (WFCC)
 - 2.2. Organization for Economic Cooperation and Development BRC Initiative
 - 2.3. Microbiological Resource Centres (MIRCEN)
3. Size of the Task
4. Quality Management
5. Information Technology
 - 5.1. Data Quality Management
 - 5.2. Typical Information Generated on Microorganisms
 - 5.3. Information Provision and Exchange
6. Preservation
 - 6.1. Background
 - 6.2. Silica Gel Storage
 - 6.3. Freeze-drying (Lyophilization)
 - 6.4. L-drying
 - 6.5. Maintenance of Bacteria in Gelatin Discs
 - 6.6. Cryopreservation
7. Quality Control based on Molecular Characterization
8. Capacity Building
9. Conclusion

MIRCEN-BITES Ljubljana: Cooperation for Research, Education and Development 168

Bojana Boh, *ICCS - International Centre for Chemical Studies, MIRCEN-BITES Ljubljana, Slovenia*

1. International Centre for Chemical Studies – ICCS
2. Biotechnological Information Exchange System – BITES
3. Examples of Projects
 - 3.1. Applications of water-retaining polymers for agricultural use
 - 3.2. Non-Toxic Pesticide with Physical Action, Based On Modified Starch
 - 3.3. *Matricaria chamomilla* Project
 - 3.4. Microencapsulation of animal repellents for agriculture
 - 3.5. *Ganoderma* Medicinal Mushrooms
4. ICCS Publications

Microbiological Resources Centre (MIRCEN) at the Chinese University of Hong Kong, Shatin, Hong Kong (1991-2003) 189

Shu-Ting Chang, *Centre for International Services to Mushroom Biotechnology, Department of Biology, The Chinese University of Hong Kong, Hong Kong SAR, China*

John A. Buswell, *Institute of Edible Fungi, Shanghai Academy of Agricultural Sciences, Shanghai 201106, China*

1. Introduction
2. Research
3. Training
4. International Services
5. Publications/Conference Presentations
