# CONTENTS

# **VOLUME III**

### Methods in Gene Engineering

Chanan Angsuthanasombat, Mahidol University, Thailand

- 1. Introduction
- 2. Gene Engineering with Polymerase Chain Reaction
  - 2.1 Principles and Limitations of PCR
  - 2.2 Applications of PCR
    - 2.2.1 Gene Fusion via Splicing by Overlap Extension
    - 2.2.2 In Vitro Mutagenesis via Amplification of Entire Plasmid
    - 2.2.3 Dideoxy-Based Directed DNA Sequencing
- 3. Gene Expression Strategies
  - 3.1 High-Level of Protein Expression in Escherichia coli
  - 3.2 Detection of Expressed Gene Products
  - 3.3 Expression of Cloned Genes as Fusion Proteins

#### **Genetic Manipulation of Bacteria**

Christopher Morton Thomas, University of Birmingham, UK

- 1. Introduction
- 2. Genetic manipulation in bacteria
- 2.1 Vectors
  - 2.1.1 Plasmid vectors
  - 2.1.2 Phage vectors
  - 2.2 In vitro recombination
- 3. Introduction of DNA into bacteria
- 4. Library screening
- 5. Polymerase chain reaction (PCR)
- 6. Expression and protein purification
- 7. Site directed mutagenesis
- 8. Genetic manipulation of bacteria
  - 8.1 Cloning specific genes
  - 8.2 DNA shuffling
- 9. Examples of genetic manipulation
  - 9.1 Producing antibodies in bacteria
  - 9.2 Manipulation of bacterial metabolism
  - 9.3 Manipulation of biodegradative capacity
  - 9.4 Bacteria as biosensors
  - 9.5 Manipulation of antibiotic biosynthesis
- 10. Biosafety

#### **Genetic Engineering of Fungal Cells**

Margo M. Moore, Department of Biological Sciences, Simon Fraser University, Burnaby, Canada

- 1. Introduction
  - 1.1. Industrial importance of fungi
  - 1.2. Purpose and range of topics covered
- 2. Generation of transforming constructs
  - 2.1. Autonomously-replicating plasmids
    - 2.2. Promoters
      - 2.2.1. Constitutive promoters

36

16

3.

4.

- 2.2.2. Inducible promoters
- 2.3. Selectable markers
  - 2.3.1. Dominant selectable markers
  - 2.3.2. Auxotrophic markers
- 2.4. Fusion PCR and Ligation PCR
- 2.5. Gateway technology
- Transformation methods
- 3.1. Natural competence and protoplast formation
- 3.2.  $CaCl_2$  and PEG
- 3.3. Electroporation
- 3.4. Agrobacterium-mediated Ti plasmid
- 3.5. Biolistics
- 3.6. Homo- versus heterokaryotic selection
- Gene disruption and gene replacement
- 4.1. Targeted gene disruption
  - 4.1.1. Ectopic versus homologous recombination
  - 4.1.2. NHEJ-deficient strains
  - 4.1.3. AMT and homologous recombination
  - 4.1.4. RNA interference
- 4.2. Random gene disruption
  - 4.2.1. Restriction enzyme-mediated integration (REMI) 4.2.1.1.1. 4.2.2. T-DNA tagging using AMT
  - 4.2.2. Transposon mutagenesis & TAGKO
- 5. Concluding statement

# **Genetic Engineering of Algal Species**

Anna Godhe, University of Göteborg, Sweden Ann-Sofi Rehnstam-Holm, G'teborg University, Sweden

- 1. Introduction
  - 1.1 What are Algae?
  - 1.2 What is Genetic Engineering?
  - 1.3 The Importance of Algae
- 2. Classification of Algae
- 3. Principles of Microalga Culture
- 4. Gene Technology
  - 4.1 Polymerase Chain Reaction
  - 4.2 Cloning
  - 4.3 Hybridization
- 5. Genetical Identification and Phylogeny
  - 5.1 Origin of Chloroplasts
  - 5.2 Use of Conserved Genes
  - 5.3 Molecular Identification of Algae
  - 5.4 Molecular Identification of Algal Populations
- 6. Genetic Engineering as a Tool to understand the Physiology, Biochemistry and Molecular Biology of Algae
  - 6.1 Model Organisms
  - 6.2 Genetic Studies of Photosynthesis
  - 6.3 Genetic Studies of Photoprotection
  - 6.4 Genetic Studies on the Function of Flagellae
  - 6.5 Genetic Studies on Transport of Proteins into Plastids
  - 6.6 Markers used for Growth Studies
  - 6.7 Processes Regulated by the Circadian Clock
- 7. Genetic Engineering of Algae: Examples of Environmental and Industrial Applications
  - 7.1 Cyanophyceae as N-fertilizers and Bioremediators
  - 7.2 Commercially Attractive Compounds from Algae
  - 7.3 Cultivation of Marine Macro Algae

# **Genetic Engineering of Plants**

Jennifer Ann Thomson, University of Cape Town, South Africa

- 1. Introduction
- 2. Transformation of dicotyledonous plants
  - 2.1 Transformation using *Agrobacterium tumefaciens*2.2 Other transformation methods
- 3. Transformation of monocotyledonous plants
  - 3.1 Biolistic transformation
  - 3.2 Agrobacterium transformation
- 4. Transformation of algae
- 5. Promoter efficiency and tissue specificity
- 6. Targeting genes to organelles
- 7. Integration and stability of transgenes

#### Genetic Engineering of Mammalian Cells

Hugo H. Montaldo, Universidad Nacional Autonoma de Mexico (UNAM), México

110

94

- 1. Introduction
- 2. Expression and Regulation of Eukaryotic Genes
- 3. Recombinant DNA Technology
  - 3.1 Restriction Enzymes
    - 3.2 DNA Vectors
    - 3.3 DNA Libraries
- 4. Genetic Maps
  - 4.1 Genetic Linkage Maps
  - 4.2 Physical Maps
    - 4.2.1 Chromosomal Map
    - 4.2.2 cDNA Map
  - 4.3 Sequencing Technologies and the Human Genome Project
  - 4.4 Gene Function and Expression in Mammals
- 5. Use of Genomic Information in Animal Improvement
- 6. Cloning Adult Mammals
  - 6.1 Cloning Methods
  - 6.2 Problems
  - 6.3 Use of Cloning in Animal Breeding
- 7. Transgenic Animals
  - 7.1 Transgenic Methods
  - 7.2 Transgenesis in the Improvement of Production Traits
    - 7.2.1 Growth and meat traits
    - 7.2.2 Milk Composition
  - 7.3 Animal Models for Human Diseases
  - 7.4 Synthesis of Biomedical Products (Bioreactors)
  - 7.5 Commercial Transgenic Products
  - 7.6 Organs for transplant
  - 7.7 Future Perspectives of transgenesis
- 8. Gene Therapy
- 9. Ethical and Social Issues
- 10. Conclusions

# **Protein Engineering**

Robert A. Grayling, *The Procter & Gamble Company, USA* Donn N. Rubingh, *The Procter & Gamble Company, USA* 

- 1. Introduction
- 2. Strategies for Protein Engineering

3.

- 2.1 Rational Methods
  - 2.1.1 Rational Design
  - 2.1.2 De Novo Protein Design
- 2.2 Directed Evolution
  - 2.2.1 Introduction and Background
  - 2.2.2 DNA Shuffling
  - 2.2.3 Screening and Selection
- Commercial Applications of Protein Engineering
- 3.1 The Cleaning Products Industry
- 3.2 The Starch Processing Industry
- 3.3 Other Enzymes
- 3.4 Other Proteins
- 4. Future Possibilities
  - 4.1 Economics and Production
  - 4.2 Future Directions
    - 4.2.1 Bioremediation
    - 4.2.2 Chemical Processing
    - 4.2.3 Pharmaceuticals
  - 4.3 Emerging Technologies
  - 4.4 Perspectives on Directed Evolution and Biodiversity
- 5. Conclusions

# Health and Gene Sciences

Yongyuth Yuthavong, National Science & Technology Development Agency, Thailand

- 1. Introduction
- 2. Relevance of genomes to human health
- 3. Diagnosis
- 4. Drugs and Vaccines: pharmacogenomics
- 5. Gene Therapy
- 6. Conclusion

#### **GMO-Technology and Malnutrition**

Ingo Potrykus, Swiss Federal Institute of Technology(ETH), Switzerland

- 1. Micronutrient malnutrition
- 2. Cost-effective and sustained production of nutritious food
- 3. Why do we have GMO regulations?
- 4. Traditional breeding
- 5. The paradox of GMO regulation
  - 5.1 What is the 'status quo' of GMO regulation?
  - 5.2 What are the consequences of the 'status quo'?
  - 5.3 What does the author consider 'rational regulation?
- 6. Is GMO over-regulation costing lives?

#### **New opportunities revealed by biotechnological Exploration of Extremophiles** Anna-Louise Reysenbach, *Portland State University, USA*

Anna-Louise Reysenbach, *Portland State University*, Mircea Podar, ,

- 1. Introduction
- 2. Extremophiles and biomolecules
- 3. Extremophile genomics exposing the biotechnological potential
- 4. Tapping into the hidden biotechnological potential through metagenomics
- 5. Unexplored frontiers and future prospects

iv

166

176

### The Challenges of Genetic Information

Lisa Austin, *University of Toronto, Canada* Trudo Lemmens, *University of Toronto, Canada* 

- 1. Introduction
- 2. What is Genetic Information?
  - 2.1 DNA Testing
  - 2.2 Indirect Genetic Testing
  - 2.3 Family History
  - 2.4 Differentiation of Genetic Testing According to its Health Care Purpose and its Timing
  - 2.5 Identification Purposes: Forensic DNA and Military DNA banks
  - 2.6 Genetic Information Distinguished According to the Way it is Stored
  - 2.7 Which Definition?
- 3. Characteristics of Genetic Information: The Claim of Genetic Exceptionalism
  - 3.1 Genetic Prophecy
  - 3.2 Lack of Control Over One's Genome
  - 3.3 Family and Ethnic Community
- 4. How Genetics Highlights Existing Problems
  - 4.1 Family and Disclosure of Risk Information
  - 4.2 Information, Longevity and Identification
  - 4.3 Uses of Genetic Information
- 5. Conclusion
