## SYSTEM DYNAMICS

### **System Dynamics - Volume 1**

**No. of Pages:** 400

**ISBN:** 978-1-84826-137-2 (eBook)

**ISBN:** 978-1-84826-587-5 (Print Volume)

### **System Dynamics - Volume 2**

**No. of Pages:** 236

**ISBN:** 978-1-84826-138-9 (eBook)

**ISBN:** 978-1-84826-588-2 (Print Volume)

## VOLUME I

<b>System Dynamics: Systemic Feedback Modeling for Policy Analysis</b>	<b>1</b>
<i>Yaman Barlas, Industrial Engineering Department, Boğaziçi University, Istanbul, Turkey</i>	

1. Introduction
2. Dynamic problems and systemic feedback perspective
  - 2.1. Dynamic Feedback Problems
  - 2.2. Systems, Problems, and Models
  - 2.3. Structure and Behavior
  - 2.4. Principles of "Systemic Feedback" Approach
  - 2.5. Complexity of Dynamic Systems and Necessity of Modeling and Simulation
3. Modeling methodology and tools
  - 3.1. Steps of the System Dynamics Method
  - 3.2. Stock and Flow Variables
  - 3.3. Positive and Negative Causal Effects and Feedback Loops
4. Dynamics of basic feedback structures
  - 4.1. Single Linear Positive Feedback Loop
  - 4.2. Single Linear Negative Feedback Loop
  - 4.3. Simple Coupling of Linear Loops
  - 4.4. A Basic Non-Linear Coupling of Loops: Density-Dependent Growth
  - 4.5. Beyond S-Shaped Growth: Overshoot-Then-Decline
5. Formulation principles and generic model structures
  - 5.1. General Principles of Formulation
  - 5.2. Linear Formulation
  - 5.3. Non-Linear Equation Formulation
  - 5.4. Time Delay Formulations
  - 5.5. Delays in Action: Oscillating Structures
  - 5.6. Generic Structures and Dynamics
6. Mathematical and technical issues
  - 6.1. Solutions, Equilibrium, and Stability
  - 6.2. Discrete Versus Continuous Time
  - 6.3. Numerical Integration and Software
  - 6.4. Noise (Randomness) in Models
7. Model testing, validity, analysis, and design
  - 7.1. Model Testing and Validity
  - 7.2. Model Analysis and Design
8. Conclusions and Future

<b>Urban Dynamics</b>	<b>69</b>
<i>Louis Edward Alfeld, ScD., Bethesda, MD, U.S.A</i>	

1. Introduction
2. The Urban Political Background
3. Understanding the City as a System
4. The Theory of Urban Attractiveness
5. Growth and Feedback
6. Modeling the System
7. The Urban Dynamics Model
8. Solving Problems
9. To Balance Jobs and People
10. Negative Counterbalances
11. Urban Trade-offs and Attractiveness

12. Concluding Reflections

**Supply Chain Dynamics, the "Beer Distribution Game" and Misperceptions in Dynamic Decision Making** **84**

John D. Sterman, *MIT System Dynamics Group, Sloan School of Management, Massachusetts Institute of Technology, USA*

1. Introduction
2. The Stock Management Problem
3. Behavior of the Stock Management Structure
4. A Supply Chain Management Experiment: the "Beer Game"
5. Results
6. Adapting the Theory to the Beer Game
7. Testing the Theory
8. Misperceptions of Feedback
9. Discussion and Conclusions

**Market Growth, Collapse and Failures to Learn from Interactive Simulation Games** **114**

M. Paich, *Colorado College, Colorado Springs, USA*

John D. Sterman, *MIT System Dynamics Group, Sloan School of Management, Massachusetts Institute of Technology, USA*

1. Introduction
2. The Interactive Simulator : Managing a New Product
  - 2.1. Market Sector
  - 2.2. Firm Sector
  - 2.3. Competitor Structure and Strategy
  - 2.4. Hypotheses and Experimental Design
  - 2.5. Results
  - 2.6. Performance Measures
  - 2.7. Learning
  - 2.8. Modeling subjects' decision rules
3. Discussion
4. Implications for learning from simulations and games

**A Dynamic Model of Cocaine Prevalence** **144**

Jack B. Homer, *Homer Consulting, New Jersey, USA*

1. Background
2. Data Sources and Trends 1976-1990
3. Model Structure and Parameters
  - 3.1. Model Overview
  - 3.2. User Population Structure
  - 3.3. User Population Parameters
  - 3.4. Cocaine Market Structure
4. Using the Model to Understand History
  - 4.1. Simulating Through 1995
  - 4.2. Historical Trends in Actual Prevalence and their Causes
  - 4.3. A Growing Gap between Reported and Actual Prevalence
5. Using the Model to Test Alternative Scenarios
6. Conclusion

**Ecological Interactions: Predator and Prey Dynamics on the Kaibab Plateau****166**Andrew Ford, *Program in Environmental Science and Regional Planning, Washington State University, USA*

1. Introduction
2. The Kaibab Deer Herd
3. Simulating the Kaibab Irruption
4. Predator Prey Systems
5. An Initial Model
6. Why Don't Predators Annihilate Their Prey?
7. Revising the Model
8. Closer Look at Stable Oscillations
9. Patterns of Oscillations
10. Predator Removal
11. Post Script

**Research and Development, Technological Innovations and Diffusions****184**Peter M. Milling, *Industrieseminar der Universität Mannheim, Mannheim University, Germany*  
Frank H. Maier, *Industrieseminar der Universität Mannheim, Mannheim University, Germany*

1. Importance of Permanent Innovation Activity
2. A System Dynamics Perspective of R&D and Innovation Diffusion Models
  - 2.1. Modeling R&D Processes
  - 2.2. Innovation Diffusion Models
    - 2.2.1. Monopolistic or Industry Diffusion Models
    - 2.2.2. Oligopolistic Models of Innovation Diffusion
    - 2.2.3. Substitution Models of Innovation Diffusion
3. Integrating the Models of R&D, Innovation and Diffusion
  - 3.1. Basic Behavior of the Holistic Model
  - 3.2. Interactions between the Stages
  - 3.3. Pricing in the Holistic Model
4. Implications for Management

**On the History, the Present, and the Future of System Dynamics****223**Jay W. Forrester, *Massachusetts Institute of Technology, Cambridge, MA, USA*

1. The History
  - 1.1. Origins
  - 1.2. Historical Development of the Early Cornerstone Projects
2. The Present
3. The Future

**Intellectual Roots and Philosophy of System Dynamics****239**Willard R. Fey, *Ecocosm Dynamics Ltd., Atlanta, Georgia, USA*

1. Feedback Control Theory
  - 1.1. How the World Creates Feedback Loops
  - 1.2. How Feedback Loop Structures Create Time Patterns
  - 1.3. Mathematics for Dynamic Analysis: Calculus and Feedback Control Theory
2. Living System Disciplines
  - 2.1. Living System Complications
  - 2.2. Disciplines that Study Important Aspects of Living Behavior
3. Philosophy of the System Dynamics Methodology
  - 3.1. System Dynamics Methodology for Creating Improved System Performance
  - 3.2. Observation and Measurement of the Subject System

- 3.3. How the Observations Are Used to Develop a Dynamic Hypothesis
- 3.4. Testing the Dynamic Hypothesis
- 3.5. Synthesis: Finding Changes in the Feedback Structure that Produce Better Time Pattern
- 3.6. Analysis of Transition Dynamics
- 3.7. Planning and Accomplishing the Proposed Changes in the Real System's Loop Structure
- 3.8. Maintenance and Continued Evaluation of the Improved System
- 4. Pattern Feedback Control
  - 4.1. System Structure Change: A Higher-level Feedback Process
  - 4.2. A Final Complication: Human Beliefs, Conceptualizations, Visions, and Attitudes
- 5. Conclusions

<b>The Role of System Dynamics within the Systems Movement</b>	<b>266</b>
<i>Markus Schwaninger, University of St. Gallen, Switzerland</i>	

- 1. Introduction
- 2. The Emergence of the Systems Approach
- 3. Common Grounds and Differences
- 4. The Variety of Systems Methodologies
  - 4.1. Methodological Traditions
  - 4.2. Types of Context
- 5. Distinctive Features of SD
- 6. Actual and Potential Relationships
- 7. Outlook

## VOLUME II

<b>Mental Models of Dynamic Systems</b>	<b>1</b>
---	----------

*James K. Doyle, Worcester Polytechnic Institute, USA*  
*David N. Ford, Texas A&M University, USA*  
*Michael J. Radzicki, Worcester Polytechnic Institute, USA*  
*W. Scott Trees, Siena College, USA*

- 1. Introduction
- 2. Definition
- 3. Characteristics
- 4. The Role of Mental Models in Dynamic Decision making
- 5. The Role of System Dynamics in Improving Mental Models
- 6. Principles for Mental Models Research
- 7. Priorities for Future Research

<b>Knowledge Elicitation</b>	<b>21</b>
------------------------------	-----------

*Jac A.M. Vennix, University of Nijmegen, Netherlands*

- 1. Introduction
- 2. Knowledge Sources and Elicitation Techniques
- 3. Eliciting Knowledge from Individuals
  - 3.1. Interviews
  - 3.2. Questionnaires
  - 3.3. Workbooks

4. Eliciting Knowledge from Groups
  - 4.1. Cognitive tasks
  - 4.2. Group Process Techniques
  - 4.3. Brainstorming
  - 4.4. Nominal Group Technique (NGT)
5. Delphi
6. Eliciting Knowledge to Construct a System Dynamics Model
  - 6.1. Eliciting Problem Definitions
  - 6.2. Eliciting Model Structure
  - 6.3. Eliciting Feedback Structure
  - 6.4. Formalizing the Model
  - 6.5. Parameter Estimation
7. Judging Model Outcome
8. Conclusions

**Qualitative and Quantitative Modeling in System Dynamics**

**33**

Geoff Coyle, *Swindon, UK*

1. Introduction
2. Problems of Quantification
3. Quantitative Uncertainty: A Case Study
4. Insights from a Qualitative Model
5. Another Qualitative Model
6. A Portrait of a Human Disaster
7. The Uses of Influence Diagrams
8. Strengths and Weaknesses of Qualitative Modeling
9. A Research Agenda for Quantification, or a Prudent Approach to Difficult Models

**Sensitivity Analysis**

**50**

Andrew Ford, *Program in Environmental Science and Regional Planning, Washington State University, USA*

1. Building Models with Uncertain Inputs
2. Robust Results
3. The Structure Causes the Behavior
4. Poorly Structured Models
5. Leverage Points
6. Formal Sensitivity Analysis
7. Sampling Methods
8. Software
9. First Example: Exponential Growth
10. Second Example: S Shaped Growth
11. Concluding Example: Overshoot and Collapse
12. Practical Suggestions
13. Discussion

**Equilibrium and Stability Analysis**

**64**

Javier Aracil, *Escuela Superior de Ingenieros, Universidad de Sevilla, Spain*

Francisco Gordillo, *Escuela Superior de Ingenieros, Universidad de Sevilla, Spain*

1. Introduction
2. Equilibrium points
3. Qualitative behavior of dynamical systems
4. Time-scale decomposition of nonlinear dynamical systems
5. Conclusions

**Simulation Software and Numerical Issues****82**Alexander L. Pugh, *Massachusetts Institute of Technology, Cambridge, USA*

1. Design Considerations
2. Major Numerical Methods
  - 2.1. Rectangular (Euler) Integration Method
  - 2.2. RungeKutta Method
  - 2.3. PredictorCorrector (Adams) Method
  - 2.4. Error-Estimating Adaptive Methods
3. Modeling Errors
  - 3.1. Simulation Error (Numerical Integration Issues)
  - 3.2. Round-Off Error
  - 3.3. Stiff Systems
4. Current Software
5. Conclusion

**Strategic Management, Systems Thinking, and Modeling****95**E. O.K. Zahn, *Department of Business Administration, Universität Stuttgart, Stuttgart, Germany*

1. Strategizing as a Core Process of Strategic Management
2. Theory and Practice of Strategic Management
  - 2.1. Theoretical Foundations
  - 2.2. Practical Aspects
3. Strategic Consensus and Organizational Performance
4. Fostering Strategic Consensus and Learning
5. System Dynamics as a Tool for Strategizing
6. Final Remarks

**Implementation Issues****109**James M. Lyneis, *Department of Social Science and Policy Studies, Worcester Polytechnic Institute, USA*

1. Introduction -- The Implementation Challenge
2. Putting into Practice Specific Policies or Decisions ("Traditional Implementation")
  - 2.1. Defining an Appropriate Problem
  - 2.2. Determining the Right Product
  - 2.3. Selecting the Process
3. Internalizing Insights (Learning)
4. On-going Enhancement and Use of a System Dynamics Model
  - 4.1. Issues in achieving on-going model use
  - 4.2. Approaches to Building an Internal Capability to Use Existing Models
5. Implementing an Approach to Modeling
  - 5.1. Issues in developing and maintaining an internal capability
  - 5.2. Building an Internal Capability to Create New Models
6. Conclusions

**Group Model-Building****123**Jac A.M. Vennix, *University of Nijmegen, Netherlands*

1. Introduction
2. Group Model-Building in a Nutshell
  - 2.1. Goals of Group Model-Building
3. Suitability of System Dynamics and Group Model-Building
4. Qualitative Versus Quantitative Models
5. Who to Involve
6. Themes in Group Model-Building: the How Question

- 6.1. One Day Versus Several Weeks/Months
- 6.2. Preliminary Models or Start from Scratch
7. Roles in Guiding the Group: the Importance of Group Facilitation
8. Practical Issues
9. Effectiveness of Group Model-Building: Assessment Studies

### **A Pervasive Duality in Economic Systems: Implications for Development Planning**

134

Khalid Saeed, *Worcester Polytechnic Institute, Worcester, MA, US*

1. Introduction
2. Past Development Effort and its Performance
  - 2.1. Development Policy Waves
  - 2.2. Unforeseen Problems Created by Development Policy
  - 2.3. Need to Link Policies to Specific Problems
3. Existing Models of Economic Development
  - 3.1. The Marxist Model
  - 3.2. The Neoclassical Model
  - 3.3. The Revisionist Models
  - 3.4. The Institutional Models
  - 3.5. Limitations of Existing Models
4. A Model of Resource Allocation and Income Disbursement in a Dual Economic System
  - 4.1. Duality as a Conceptual Framework for a Policy Model
  - 4.2. Structure of the proposed model
  - 4.3. Model Behavior Showing the Emergence of a Feudal Economy
  - 4.4. Model Behavior Showing the Emergence of a Dual Economy
5. Understanding Dualism and Designing Policies for Change with the Model
  - 5.1. Feedback loops degenerating a capitalist system
  - 5.2. What Drives the Creation of a Dysfunctional Dualist Pattern?
  - 5.3. Policies for Change
6. Implications for Sectoral, National, and Global Interventions
  - 6.1. Sector Economy Context
  - 6.2. National Economy Context
  - 6.3. Global Economy Context
7. Role of Governance
  - 7.1. Feedback Loops Driving an Unstable Governance System
  - 7.2. Policies for Arresting Instability of Governance Systems
8. Conclusion

### **The ECOCOSM Paradox**

158

Willard R. Fey, *Ecocosm Dynamics Ltd., Atlanta, Georgia, USA*

Ann C. W. Lam, *Ecocosm Dynamics Ltd., Atlanta, Georgia, USA*

1. Introduction
2. The Power of Compound Hyper-exponential Time Functions
3. Data Time Histories for Important World Variables
4. The Instability of the Human System on Earth
5. Feedback Structures That Cause the Exponential Time Patterns
  - 5.1. Population Feedback Structure
  - 5.2. Technology's Feedback Structure
  - 5.3. Economic and Government Loops that Reinforce Consumption Growth
6. The Nature of Sustainability
7. Proposals for Achieving Perpetual Sustainability
  - 7.1. Technological Solutions
  - 7.2. Economic Solutions
  - 7.3. Stabilization of Consumption through Price Adjustments
  - 7.4. Government Policy and Treaty Solutions

## 8. Conclusions

**Lessons from Electric Utility Modeling****181**Andrew Ford, *Program in Environmental Science and Regional Planning, Washington State University, USA*

1. Background on Electric Power in the United States
  - 1.1. The Golden Years
  - 1.2. The Difficult Years
2. The IOUs, the Regulators and the Death Spiral
3. The Shift to Small Scale
4. System Dynamics Applications
5. Bonneville and the Conservation Policy Analysis Model
6. The Common Utility Approach
7. Single Company Models
8. Concluding Reflections

**Irrigation Projects, Agricultural Dynamics and The Environment****197**Ali Kerem Saysel, *Institute of Environmental Sciences, Boğaziçi University, Turkey*

1. Introduction
2. Model Description
  - 2.1. Farmlands
  - 2.2. Land - Water Development
  - 2.3. Irrigation – Salinization
  - 2.4. Pests
3. Model Validation
4. Reference Behavior of the Model
5. Model Analysis
  - 5.1. Feedback View of Land-Water Development and Irrigation
  - 5.2. Effect of Salinization
  - 5.3. Effect of Pests and Pesticide Application
6. Discussion and Conclusion

**System Dynamics for Discerning Developmental Problems****220**Khalid Saeed, *Social Science and Policy Studies Department, Worcester Polytechnic Institute, Worcester, MA, USA*

1. Introduction
2. Development Planning Based on Recognition of Existing Conditions
3. Reference Mode Construction as a Learning Process for Defining Developmental Problems
4. An Experiential Learning Framework for Constructing a Reference Mode
  - 4.1. First Learning Cycle: Delineation of a System Boundary
  - 4.2. Second Learning Cycle: Recognition of a Fabric of Past Trends Within the Defined System Boundary
  - 4.3. Third Learning Cycle: Constructing a System of Past Trends for Policy Variables Missing from Historical Data
  - 4.4. Fourth Learning Cycle: Projecting Past Trends into Future to Create a Reference Mode
5. An Illustration of Reference Mode Construction for the Food Shortage Problem
  - 5.1. Determining System Boundary
  - 5.2. Growth of the Consumption Base
  - 5.3. Condition of Renewable Agricultural Resources
  - 5.4. Recognizing Past Trends within the Defined System Boundary
  - 5.5. Constructing Past Trends for the Policy Related Variables
6. Constructing the Reference Mode

- 6.1. Reference Modes for Poverty and Internal Security Problems
- 7. Current Developmental Issues
- 8. Conclusion
