ECOLOGY

Ecology - Volume 1

No. of Pages: 508

ISBN: 978-1-84826-290-4 (eBook)

ISBN: 978-1-84826-740-4 (Print Volume)

Ecology - Volume 2

No. of Pages: 432

ISBN: 978-1-84826-291-1 (eBook)

ISBN: 978-1-84826-741-1 (Print Volume)

For more information of e-book and Print Volume(s) order, please [click here](#)

CONTENTS

VOLUME I

The Science of Ecology for a Sustainable World **1**

Antonio Bodini, *Department of Environmental Sciences, University of Parma, Italy*
 Stefan Klotz, *Department of Community Ecology, Center for Environmental Research, Leipzig-Halle, Germany*

1. Introduction: Ecology as a Scientific Discipline
 - 1.1. A Historical Perspective
 - 1.2. Different Approaches to Ecological Investigation: The Nature of Ecological Thought
2. Present Trends and Critical Issues: The Functional Approach of Ecology
 - 2.1. The Ecology of Individuals: The Relationship Between the Organism and Its Environment
 - 2.2. Complex Interactions: The Functional Ecology of Populations and Communities
 - 2.3. Networks and the Functional Complexity of Ecosystems
 - 2.4. From Local to Global, From Global to Local: Ecology Across Scales
3. Future Perspectives
4. Conclusions

Concepts of Ecosystem, Level and Scale **34**

R. R. Christian, *Biology Department, East Carolina University, USA*

1. Introduction
2. Definitions of ecosystem and their history
3. Hierarchy, scale and level of complexity
4. Systems ecology
5. Food webs, material cycles, and feedback loops
6. Limitations
7. Benefits and value

Global Ecology **52**

R. J. Huggett, *Reader in Geography, University of Manchester, Manchester, UK*

1. Introduction
 - 1.1. The Need for Global Ecology
 - 1.2. What is the Global Ecosystem?
 - 1.2.1. The Earth System
 - 1.2.2. Gaia
 - 1.3. The Tools of Global Ecology
2. Mapping and Measuring the Global Ecosystem
 - 2.1. The State of the Earth System
 - 2.2. Flows in the Earth System
 - 2.2.1. Toxic Chemical Flows
 - 2.2.2. Sediment Flows
 - 2.2.3. Carbon Flows
 - 2.3. The Earth System in the Past
3. Modeling the Global Ecosystem
 - 3.1. Tutorial Models
 - 3.2. Comprehensive Models
 - 3.3. Intermediate Complexity Models
4. Miniaturizing the Biosphere
 - 4.1. Artificial Biospheres
 - 4.2. Semi-artificial Biosphere Experiments

5. Managing the Global Ecosystem

Applied Ecology

77

Stephen D. Murphy, *Department of Environment and Resource Studies, University of Waterloo, Canada*

1. General Introduction: What is applied ecology?
2. Ecosystem management and conservation
 - 2.1. Introduction
 - 2.2. Island Biogeography
 - 2.3. Connectivity and Structure.
 - 2.4. Metapopulations.
 - 2.5. Selective Breeding and Hybridization.
 - 2.6. Genetic Engineering.
 - 2.7. Cloning.
 - 2.8. Focusing on Processes Rather Than Parts: Community and Ecosystem Assembly.
 - 2.9. The Problems with Focusing On Species, Populations, Individuals, and Genes.
3. Ecotoxicology and Pollution Management
4. Pest Management
5. Restoration Ecology
6. Conclusion

Restoration Ecology

101

J. Cortina, *Department of Ecology, University of Alicante, Spain*

V. R. Vallejo, *Centre for Mediterranean Environmental Study, Valencia, Spain.*

1. Introduction
2. Ecosystem degradation and restoration
 - 2.1. The origins of ecosystem degradation
 - 2.2. Thresholds in ecosystem degradation
3. Objectives of restoration
 - 3.1. Time scales in restoration objectives
 - 3.2. Ecosystem dynamics and restoration
 - 3.3. A framework for ecosystem restoration
4. Unwanted species and disturbance regime
5. The introduction of species
 - 5.1. Species introduction to foster succession
 - 5.2. The provenance of introduced species
 - 5.3. Passive and active techniques of species introduction
 - 5.4. Seedling quality for plant species introduction
 - 5.5. Animal species introduction
6. Environmental conditions and their manipulation
7. Landscape restoration

Ecology, Biological Conservation and Policy

125

Tatjana Good and Jon Paul Rodríguez, *Centro Internacional de Ecología Tropical, Instituto Venezolano de Investigaciones Científicas, and bioDISCOVERY, DIVERSITAS, Venezuela*

1. Conservation Biology as a Crisis-oriented, Interdisciplinary Science
2. Ecological Theory and its Application to Conservation Biology
 - 2.1. Theory of Island Biogeography
 - 2.2. The Single Large or Several Small (SLOSS) Debate
 - 2.3. Minimum Population Size (MVP) and Population Viability Analysis (PVA)
 - 2.4. Metapopulation Dynamics
 - 2.5. The Importance of Connectivity
 - 2.6. Different Strategies for Protecting Biodiversity

- 2.7. The Concept of Complementarity
- 2.8. Reserve Selection Algorithms
- 2.9. Predator Reintroductions and Ecosystem Restoration
- 2.10. Emerging Diseases and Conservation
- 3. Conservation at the Cross Roads
 - 3.1. Policy in the Making – the Convention on Biological Diversity and its 2010 target
 - 3.2. Conservation and the Private sector – Developing New Tools
 - 3.2.1. Conservation Banking
 - 3.2.2. Direct Payment for Conservation: Conservation Concessions
- 4. Where to go from here?
 - 4.1. Biodiversity, Sustainability and Ecosystem Services
 - 4.1.1. Assessing Biodiversity and Monitoring its Changes
 - 4.1.2. Assessing the Impacts of Biodiversity Changes on Ecosystem Services.
 - 4.1.3. Developing the Conservation and Sustainable use of Biodiversity
 - 4.2. Conservation Biologists, the Media and Public Policy
- 5. Conclusions/Outlook

Biological Control and Ecosystem Services

158

G. Gilioli, *Università di Reggio Calabria, Italy*

J. Baumgärtner, *ICIPE Nairobi, Kenya; and CASAS Kensington, California, USA*

V. Vacante, *Università di Reggio Calabria, Italy*

- 1. Introduction
- 2. Biological control of arthropod pests
 - 2.1. History of the biological control concept
 - 2.2. Classical biological control or introduction of natural enemies
 - 2.2.1. Classical biological control in silviculture: the Winter Moth
 - 2.2.2. Classical biological control in agriculture: the Cassava Mealybug
 - 2.3. Augmentation of natural enemies
 - 2.3.1. Inundative release of *Phytoseiulus persimilis* A.H. for Two-Spotted Spider Mite control
 - 2.3.2. Inundative releases of *Encarsia formosa* Gahan for Greenhouse Whitefly control
 - 2.4. Conservation of natural enemies (habitat management)
 - 2.4.1. Natural enemy conservation for Grape Leafhopper control
 - 2.4.2. Natural enemy conservation for tick vector control
 - 2.5. Biological control as single species pest management technique
- 3. Biological control and ecosystem management
 - 3.1. Ecosystem management
 - 3.2. Environmental sustainability of Agroecosystems
 - 3.3. Conceptual and operational instruments for integrating biological control into ecosystem management
 - 3.3.1. Adequate knowledge
 - 3.3.2. Ecosystem management options
 - 3.3.3. Management considerations

Ecology of Populations and Communities

181

Vladimir N. Bolshakov and Feodor V. Kryazhinskii, *Institute of Plant and Animal Ecology, Yekaterinburg, Russia*

- 1. Introduction
- 2. Ecological Systems as a Subject of Ecology
- 3. Hierarchy of Ecological Systems
- 4. Population Systems as a Crossroad of Ecology and Evolution Theory
- 5. Dynamics of Populations
- 6. Population Structures
- 7. Population Demography
- 8. Interactions between Populations within a Community

9. Flows of Energy and Cycles of Matter

Macroecology **208**

José Alexandre Felizola Diniz-Filho, *Departamento de Biologia Geral, ICB, Universidade Federal de Goiás (UFG, Cx.P. 131, 74001-970 Goiânia, GO, Brasil*

Renata Alves da Mata, *CNPq Pos-Doctoral Program, Instituto de Ciências Biológicas, Universidade Federal de Goiás (UFG), Brasil*

1. Introduction
2. Patterns and Processes
3. Geographical and Historical Structures
4. Patterns in Species Richness
5. Challenges in Tropical Macroecology
6. Concluding remarks

Biology, Ecology and Health **230**

Andrew A. Arata, *Alexandria, Virginia, USA*

1. Introduction
2. Evolutionary Adaptations
3. Patterns of Migration
4. Domestication of Livestock and Human Cohabitation
5. Ecological Modifications and Biodiversity
6. Final Considerations

History and Scope of Biological Sciences **246**

Alberto M. Simonetta, *Dipartimento di Biologia Animale e Genetica "L.Pardi", Universit di Firenze, Italy*

1. Ancient and Medieval Times up to the 16th Century
2. Post-Renaissance Developments
3. Paleontology and Evolution
4. Morphology and Physiology
5. Genetics
6. Behavior
7. Ecology and Applied Ecology

History of Biology **262**

Alberto M. Simonetta, *Dipartimento di Biologia Animale e Genetica, "L. Pardi," University of Firenze, Italy*

1. Introduction
2. Antiquity
3. The Medieval and Renaissance Periods
4. The development of morphology
5. Palaeontology
6. Taxonomy and Evolution
7. Hystology, Reproduction and embryology
8. Physiology
9. Genetics
10. Ecology and Ethology
11. Pathology

Biogeography

281

Meadows, Michael E, *University of Cape Town, South Africa*

1. Introduction: defining the indefinable
2. History of biogeography
 - 2.1. Development of the spatial tradition
 - 2.2. Ecological biogeography
3. The major approaches to biogeography
 - 3.1. The spatial tradition: phytogeography and zoogeography
 - 3.2. The spatial tradition: historical biogeography
 - 3.3. The spatial tradition: vicariance and dispersal
 - 3.4. The ecological tradition: ecosystems
 - 3.5. The ecological tradition: palaeoecology
 - 3.6. The ecological tradition: island biogeography
4. Towards an applied biogeography
 - 4.1. Conservation biology
 - 4.2. Global change studies
 - 4.3. Ecosystem management

Current Views of Global Carrying Capacity

312

Jisong Wu, Director General, *Department of Water Resources, Ministry of Water Resources, People's Republic of China*

1. Current Views of Global Carrying Capacity
2. The Global Social, Economic, and Cultural Situation
 - 2.1. Economic Differences
 - 2.2. Cultural Differences
 - 2.3. A Comparison of Production and Consumption between Developed and Developing Countries
3. Carrying Capacity of Natural Resources
4. The Environment, Environmental Problems, and Environmental Protection
5. Population, Resources, and Environment
6. Sustainable Development and Global Carrying Capacity

Problems, Restoration, and Conservation of Lakes and Rivers

355

Takashi Asaeda, *Saitama University, Japan*
 Jagath Manatunge, *Saitama University, Japan*
 Bae Kyung Park, *Saitama University, Japan*
 Tilak Priyadarshana, *Saitama University, Japan*

1. Introduction
2. Dynamics of Rivers and Streams and Lakes
 - 2.1. Energy Flow and Nutrients in Rivers and Streams
 - 2.1.1. Organic Matter in Rivers
 - 2.2. Nutrient Dynamics of Rivers
 - 2.3. Physical Processes of Lakes
 - 2.3.1. Light Zonation
 - 2.3.2. Thermal Stratification and Wind Action
 - 2.3.3. Circulation in Tropical Lakes
 - 2.3.4. Importance of Water Circulation in Lakes
 - 2.4. Chemical Processes in Lakes
 - 2.5. Biological Processes in Lakes
3. Threats and Consequences
 - 3.1. Eutrophication
 - 3.1.1. Sources of Eutrophication
 - 3.1.2. Consequences of Eutrophication
 - 3.2. Organic Pollution of Rivers and Streams

- 3.2.1. Point Source
- 3.2.2. Nonpoint Source
- 3.3. Chemical Pollution
 - 3.3.1. Sources of Pollutants
 - 3.3.2. Consequences of Chemical Pollution
- 3.4. Acidification
 - 3.4.1. Sources of Acid Pollutants
 - 3.4.2. Effects of Acidification on Aquatic Ecosystems
- 3.5. Overexploitation
 - 3.5.1. Threats and Consequences of Overexploitation
- 3.6. Introduction of Exotic Species
 - 3.6.1. Threats and Consequences
- 3.7. Siltation and Pollution from Watershed
 - 3.7.1. Sources of Pollutants
 - 3.7.2. Consequences of Siltation
- 4. Restoration of Aquatic Ecosystems
 - 4.1. Diagnosis and Control of Lakes and Reservoirs
 - 4.1.1. Eutrophication
 - 4.1.2. Control of Aquatic Macrophytes
 - 4.1.3. Increasing Hypolimnetic Low Oxygen
 - 4.1.4. Removal of Excess Sediment
 - 4.1.5. Control of Exotic Species
 - 4.1.6. Recovery from Acidic Lakes
 - 4.1.7. Removal of Chemical Contaminants
 - 4.2. Diagnosis and Control of River and Stream Stresses
 - 4.2.1. Instream Techniques
 - 4.2.2. Stream Bank Treatments
 - 4.2.3. Water Management
 - 4.2.4. Channel Reconstructions
 - 4.2.5. Stream Corridor Restoration Measures
 - 4.2.6. Watershed Management
- 5. Conservation and Policy Framework
 - 5.1. Basin Management Measures
 - 5.1.1. Protection of the Catchment
 - 5.1.2. Waste Treatment
 - 5.1.3. Management of River and Lake Margins
 - 5.2. Community Participation
 - 5.3. Technology Transfer and Capacity Building
 - 5.4. Policy Issues
- 6. The Future
 - 6.1. Contribution of Limnologists to Water Management
 - 6.1.1. Future Trends in Limnology Research
 - 6.1.2. Applied Limnology and Future Trends in Restoration Techniques
 - 6.2. Role of Ecological Modeling
 - 6.3. Role of Communities and Policies
 - 6.3.1. Streamflow Allocations
 - 6.3.2. The Need for Action

Ecologically Based Standards

416

Luc Hens, *Department of Human Ecology, Free University of Brussels (VUB), Belgium*

- 1. Introduction
- 2. Definition
- 3. Background information
 - 3.1. Characteristics of ecosystems relevant to ecological standard setting
 - 3.2. Typology and classification
 - 3.3. Borders of ecosystems

4. Basic principles for ecological standard establishment
 - 4.1. Definition and scope of ecotoxicology
 - 4.2. Single-species tests
 - 4.2.1. Test organisms
 - 4.2.2. Exposure time
 - 4.2.3. Toxicity parameters
 - 4.2.4. Standardized single-species tests
 - 4.3. Ecosystem models
 - 4.4. Field investigations
 - 4.5. Tiering data and testing schemes
 - 4.6. Extrapolation from experimental data to ecosystems
 - 4.7. Transport, transformation, distribution
 - 4.8. Integrated risk assessment for environmental objectives
5. Surface water management in the Netherlands: an application
6. Conclusions and future developments

Index **441**

About EOLSS **449**

VOLUME II

Ice Ecosystems and Biodiversity **2**

Roland Psenner, *University of Innsbruck, Institute of Ecology, Technikerstr. Innsbruck, Austria*
 Anton Wille, *University of Innsbruck, Institute of Ecology, Technikerstr. Innsbruck, Austria*
 Birgit Sattler, *University of Innsbruck, Institute of Ecology, Technikerstr. Innsbruck, Austria*
 John C. Priscu, *Department of Land Resources and Environmental Sciences, Montana State University, Bozeman, Montana, USA*
 Marisol Felip, *University of Barcelona, Department of Ecology, Diagonal Barcelona, Spain*
 Dietmar Wagenbach, *University of Heidelberg, Institute of Environmental Physics, Im Neuenheimer Feld, Heidelberg, Germany*

1. Introduction
 - 1.1. Definitions and dimensions
 - 1.2. Physico-chemical constraints
 - 1.3. Effects on microorganisms
2. Known and unknown ice ecosystems
 - 2.1. Ice Covers Over Liquid Water
 - 2.1.1. Sea Ice
 - 2.1.2. Seasonal Ice Covers on Alpine Lakes
 - 2.1.3. Permanent Ice Covers on Antarctic Lakes
 - 2.2. Snow Cover
 - 2.3. Glaciers
 - 2.4. Supercooled Cloud Droplets
3. Open questions
 - 3.1. Cold = Oligotrophic?
 - 3.2. Barrier versus Connectivity— Are Ice Ecosystems Ecotones?
 - 3.3. Origin of Organisms
 - 3.4. Applications
 - 3.5. Perspectives under a Global Warming Scenario
 - 3.6. Can Ice Ecosystems Exist without Solar Radiation?
 - 3.7. Implications for the Origin of Life
4. Conclusion

Ecological Risk Assessment of Environmental Stress

37

A.M. Breure, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

D.T. Jager, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

D. van de Meent, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

Ch. Mulder, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

W.J.G.M. Peijnenburg, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

L. Posthuma, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

M. Rutgers, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

A.J. Schouten, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

A. Sterkenburg, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

J. Struijs, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

P. van Beelen, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

M. Vonk, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

D. de Zwart, *Laboratory for Ecotoxicology, National Institute of Public Health and the Environment, Bilthoven, The Netherlands*

1. Methodologies for Ecological Assessments
2. Assessment of the Concentration and Fate of Toxicants in the Environment
 - 2.1. Simplebox
 - 2.2. The SimpleTreat Model
 - 2.3. Bioavailability of Chemicals
 - 2.4. Chemical Availability of Metals for Uptake by Soil Dwelling Organisms
 - 2.5. Environmental Bioavailability
 - 2.6. Toxicological Bioavailability
 - 2.7. Bioavailability and Biodegradation
3. Assessment of Effects of Toxic Stress
 - 3.1. Species Sensitivity Distributions
 - 3.2. Derivation of Environmental Quality Criteria from SSDs
 - 3.3. Derivation of Potentially Affected Fraction of Species (PAF) from SSDs for the Evaluation of Ecotoxic Risk
 - 3.4. Ecotoxic Stress Caused by Exposure to a Cocktail of Toxicants
 - 3.5. The IQ-Tox Computer Program for Ecotoxic Risk Evaluation
 - 3.6. Measurement of the Effect of Toxic Stress in the Environment
 - 3.7. A Microbial Indicator to Assess Field Effects of Toxic Stress
 - 3.8. Assessment of Toxic Stress in Relation to Other Stresses: Multi-Stress Analysis
4. Measurement of Multiple Stress Effects
 - 4.1. Biological Indicator for Soil Quality (BISQ)
 - 4.2. A Microbial Indicator for Ecological Quality
5. Decision Support Systems
 - 5.1. The European Union System for the Evaluation of Substances (EUSES)
 - 5.2. DSS for Site Specific Risk Assessment of Toxic Contamination
 - 5.3. An Indicator Tool for Integral Analysis of Stresses
6. Concluding Remarks

Forest Ecology

70

James Peter (Hamish) Kimmins, *Department Of Forest Sciences, University Of British Columbia, Canada*

1. Introduction: What is a Forest, What are Forest Ecosystems, and What is Forest Ecology?
2. Why are Forests Different from One Part of the World to Another, at Different Locations on a Continent, and Even Locally?
3. Why do Forests Change Over Time? The Question of Temporal Diversity.
4. Forest Ecosystem Structure
 - 4.1. Soil
 - 4.2. Microclimate
 - 4.3. Vegetation Structure
5. Forest Ecosystem Function
 - 5.1. Energy and Biomass
 - 5.2. Nutrient Cycling
 - 5.3. Other Functions
6. Interactions Between the Components and Processes of Forest Ecosystems
7. Forest Ecosystem Complexity
 - 7.1. Aspects of Complexity
 - 7.2. Implications of Complexity
 - 7.3. Complexity and Predictability
8. An Ecological Foundation for Sustainable Forest Management: The Application of Knowledge of Forest Ecology
 - 8.1. Stand Level Sustainability: The Concept of "Ecological Rotations"
 - 8.2. Landscape Level Sustainability: The Concept of the Shifting Mosaic
9. Non-timber Aspects of Forest Ecology
10. How can Forest Ecology Deal with Ecosystem Complexity and the Large Spatial and Temporal Scales of Forest Ecosystems? The Role of Remote Sensing and Modelling
11. Conclusions

Ecology and Technology

105

Vellidis, G, *Biological & Agricultural Engineering Department, University of Georgia, Tifton, USA*
 Gattie, D.K, *Biological & Agricultural Engineering Department, University of Georgia, Athens, USA*
 Smith, M.C, *Biological & Agricultural Engineering Department, University of Georgia, Athens, USA*

1. Introduction
2. The Interconnection of Human Beings and the Natural Environment
3. Designing with Ecological Constraints
4. The Issue of Sustainability
 - 4.1. Sustainable Agriculture
 - 4.1.1. Soil and Water Resources
 - 4.1.2. Agronomic and Horticultural Production
 - 4.1.3. Animal Production
 - 4.1.4. The Economic, Social and Political Context
5. What is an Ecosystem Service?
 - 5.1. Ecosystem Health
 - 5.2. Quantifying Ecosystem Services
6. Ecological Engineering – the Merging of Ecology and Technology
7. Key Technologies for Sustainable Ecosystems
 - 7.1. Geographic Information Systems (GIS)
 - 7.2. Global Positioning Systems (GPS)
 - 7.3. Remote Sensing
 - 7.4. Precision Farming
 - 7.5. Ecological Simulation Models
8. Implementing Ecology and Technology
 - 8.1. Case Studies
 - 8.1.1. Precision Farming

- 8.1.2. Restoration of Riparian Ecosystem Services
- 8.1.3. A Landscape Approach to Protecting Water Quality

Chemical Disruption of Biological Phenomena **133**

Victoria V. Cheung, *Plymouth Environmental Research Center, University of Plymouth, Drake Circus, Plymouth, UK.*
 Tamara S. Galloway, *Plymouth Environmental Research Center, University of Plymouth, Drake Circus, Plymouth, UK.*
 Michael H. Depledge, *Environment Agency, Rio House, Aztec West, Bristol, UK.*

- 1. Introduction
- 2. Biological Responses to Chemicals in the Environment
 - 2.1. Biological Effects of Heavy Metals
 - 2.2. Biological Effects of Organic Contaminants
 - 2.3. Biological Effects of Radiation
- 3. Detection and Assessment: Biomarkers
- 4. Risk Assessment
- 5. Future Perspectives

Ecotoxicity, Genotoxicity, and Cytotoxicity of Pesticides and their Degradation Products **155**

David F. Crawford, *Department of Toxicology, Wellmark International, Schaumburg, IL USA*

- 1. Introduction
- 2. Pesticide Usage and Distribution
- 3. General Factors of Ecotoxicology
 - 3.1. Fate and Transport
 - 3.2. Toxicology Principles
- 4. Ecotoxicology of Pesticides
 - 4.1. Aquatic Vertebrates and Invertebrates
 - 4.2. Aquatic Microorganisms
 - 4.3. Terrestrial Invertebrates and Vertebrates
- 5. Genotoxicity and Cytotoxicity of Pesticides
- 6. Mechanisms of Genotoxicity and Cytotoxicity
- 7. Importance and Implications of Genetic and Cytotoxic Damage
- 8. Conclusions

Ecological Economics **180**

Brian Czech, *Center for the Advancement of the Steady State Economy, 5101 South 11th Street., Arlington, Virginia 22204, USA*

- 1. Historical Development of Ecological Economics
- 2. Approach and Philosophy of Ecological Economics
 - 2.1. Transdisciplinarity
 - 2.2. Ends, Means, and a Normative Stance
- 3. Themes and Emphases of Ecological Economics
 - 3.1. The Scale Issue
 - 3.2. Distribution of Wealth
 - 3.3. Allocation of Resources
- 4. Policy Implications of Ecological Economics
 - 4.1. Sustainable Scale
 - 4.2. Fair Distribution
 - 4.3. Efficient Allocation
- 5. Future Directions and Challenges for Ecological Economics
 - 5.1. Reinforcing the Primacy of Sustainable Scale
 - 5.2. Clarifying the Ecological Implications of Money Volumes and Flows

- 5.3. Conceivable Need for De-Growth
- 6. Conclusion

Biomonitoring of Environmental Pollution

212

Sergey Kotelevtsev, *Moscow State University, Moscow, Russia*
 Valerii Tonkopiï, *Russian Academy of Sciences, St. Petersburg, Russia*
 Osmo Hänninen, *University of Kuopio, Finland*

- 1. Introduction and Background
- 2. Biomarker Molecules
 - 2.1. Genomic and mRNA Analyses
 - 2.2. Proteomics: Enzymes and Other Proteins
- 3. Models Used in Biomonitoring
 - 3.1. Cell Cultures
 - 3.2. Tests with Invertebrates
 - 3.3. Populations and Wild Vertebrates
 - 3.4. Caged Organisms
- 4. Biomonitoring of the Quality of Air
- 5. Soil Pollution
- 6. Pollution and Biomonitoring of Water Resources
- 7. Biomonitoring of Textile Safety
- 8. Human and Animal Diseases in the Biomonitoring of Environmental Pollution
- 9. Attempts at Pollutant Bioidentification
 - 9.1. Heavy Metals
 - 9.2. Organophosphates
 - 9.3. Organochlorines
 - 9.4. Cyanides
 - 9.5. Pyrethroids
- 10. Chemical Analysis of Pollutants and Biomonitoring

Population Models

235

Michael B. Bonsall, *Department of Zoology, University of Oxford, Oxford, UK*

- 1. Introduction
- 2. Continuous-Time Population Models
 - 2.1. Pure Birth Processes
 - 2.2. Pure Death Processes
 - 2.3. Birth-death Processes
 - 2.4. Logistic Model
 - 2.5. Competitive Interactions
 - 2.5.1. Interspecific Competition
 - 2.5.2. Mechanistic Interspecific Competition
 - 2.6. Predator-Prey Interactions
 - 2.7. Age Structure
- 3. Discrete-Time Population Models
 - 3.1. Single Species Interactions
 - 3.2. Predator-Prey Interactions
 - 3.3. Age Structure
- 4. Stochastic Population Models
 - 4.1. Birth-death Process
 - 4.2. Predation and Competition
- 5. Future Developments

1. Introduction
2. Simple Stories but Challenging Concerns
 - 2.1. Introduction
 - 2.2. Life and Death with Averages and Variability
 - 2.3. Innovative Statistical Mind Sets
 - 2.4. Comprehensive vs. Comprehensible
 - 2.5. Space Age/Stone Age
 - 2.6. Cycle of No Information, New Information, and Non Information
 - 2.7. Mechanization/Computerization
 - 2.8. Normality, Lognormality and Beyond Lognormality
 - 2.9. Triad
 - 2.10. Follow-up
3. Ecological Sampling and Statistical Inference
 - 3.1. Encounter Sampling
 - 3.2. Adaptive Sampling
 - 3.3. Distance Sampling
 - 3.4. Capture-Recapture Sampling
4. Biodiversity Measurement and Comparison
 - 4.1. Biodiversity with Presence/Absence Data
 - 4.2. Biodiversity with Relative Abundance Data
 - 4.2.1. Am I a Specialist or a Generalist?
 - 4.2.2. Resource Apportionment
 - 4.2.3. Diversity as Average Species Rarity
 - 4.3. Diversity Profiles
5. Environmental Data and Cost-Effective Acquisition
 - 5.1. Observational Economy
 - 5.2. Design and Analysis with Composite Samples
 - 5.3. Ranked Set Samples
 - 5.4. Sampling Heterogeneous Media
 - 5.5. Combining Environmental Information
6. Landscape Ecology and Multi-Scale Assessment
 - 6.1. Hierarchical Markov Transition Matrix Models
 - 6.1.1. Spatial Dependence, Auto-Association, and Adjacency Matrix
 - 6.1.2. Hierarchical Classified Map Simulation Model
 - 6.1.3. Fragmentation Profiles
7. Echelon Analysis for Multispectral Environmental Change Detection
 - 7.1. Introduction and Background
 - 7.2. Echelons of Spatial Variation
 - 7.3. Echelon Characteristics
 - 7.4. Echelon Trees
 - 7.5. Echelon Profiles
 - 7.6. Echelon Research
 - 7.7. Environmental Applications
8. Statistics as an Instrument to Deal with Environmental and Ecological Crisis
 - 8.1. Increasing Use of Statistical Language in the Regulation of Environment and Natural Resources
 - 8.2. Conflict Resolution and Sustainable Development
 - 8.2.1. How Many of Them are Out There
 - 8.2.2. Long-Term Ecological Research
 - 8.2.3. Design, Analysis, and Nature of Our Observations
 - 8.2.4. Information Age and Sustainable Development
 - 8.3. Synthesis and Analysis with Integrated Satellite Data, Site Data, and Survey Data
9. Future Areas of Concern and Challenge
 - 9.1. Environmental Monitoring and Assessment
 - 9.2. Environmental Sampling and Observational Economy

- 9.3. Geo-Spatial Statistics and Spatio-Temporal Statistics
- 9.4. Ecological Assessment and Multi-Scale Analysis
- 9.5. Environmental Data Synthesis and Statistical Meta-Analysis
- 9.6. Statistics in Environmental Toxicology and Epidemiology
- 9.7. Environmental Risk Assessment and Reduction
- 9.8. Computational Ecometrics and Environmetrics
- 10. Looking Ahead

Mathematical Models of Biology

298

P. Haccou, *Institute of Biology, Leiden University, The Netherlands*

- 1. About Modeling
 - 1.1. What Are Models?
 - 1.2. Features of Models
 - 1.2.1. Manageability
