INTEGRATED GLOBAL MODELS OF SUSTAINABLE DEVELOPMENT

Integrated Global Models of Sustainable Development - Volume 1

No. of Pages: 352

ISBN: 978-1-905839-17-9 (eBook)

ISBN: 978-1-84826-917-0 (Print Volume)

Integrated Global Models of Sustainable Development - Volume 2

No. of Pages: 235

ISBN: 978-1-905839-18-6 (eBook)

ISBN: 978-1-84826-918-7 (Print Volume)

Integrated Global Models of Sustainable Development - Volume 3

No. of Pages: 324

ISBN: 978-1-905839-19-3 (eBook)

ISBN: 978-1-84826-919-4 (Print Volume)

CONTENTS

VOLUME I

Futures of Global Interdependence Modeling System: Integrated Global Model for Sustainable Development **1**

Akira Onishi, *Center for Global Modeling, FOST (Foundation for Fusion of Science and Technology), Japan*

Masahiro Onishi, *The University of Tokyo, Faculty of Engineering, Japan*

1. Introduction
2. Outline of FUGI Global Modeling System
 - 2.1. Regional Classification
 - 2.2. Scientific Design Concept of the Global Modeling System
 - 2.3. Model Structure
 - 2.4. Model Software
3. Some Examples of Estimated Parameters of the Model
4. The Baseline Projections of the World Economy, 2006-2020
5. Strategy for Sustainable Development
6. Conclusion

World3 and Stragem: History, Goals, Assumptions, Implications **104**

Dennis Meadows, *University of New Hampshire, Durham, NH, US*

1. Introduction
2. Possible Functions of Global Models
3. World3
 - 3.1. History of World3
 - 3.2. Goals of World3
 - 3.3. Major Assumptions
 - 3.4. Major Results
4. Stragem
 - 4.1. History of STRATEGEM
 - 4.2. Goals of STRATEGEM
 - 4.3. Major Assumptions
 - 4.4. Results
5. Reflections and Expectations: It is Too Late for Sustainable Development
 - 5.1. The Myth of Sustainable Development
 - 5.2. Symptoms of Overshoot
 - 5.3. Implications of Overshoot
 - 5.4. New Ethics and Modes of Governance
 - 5.5. The Concept of Survivable Development

The World Input-Output Model (WIOM) **124**

Wassily Leontief, *Institute of Economic Analysis, New York University, New York, USA*

Akira Onishi, *Centre for Global Modeling, Japan*

1. Historical Background of WIOM
2. Scope and Methodology
 - 2.1. Breakdown of Sectors
 - 2.2. The Model
3. World Economic Development and its Implications
4. Policy Implications for Sustainable Development

The Project LINK Model**132**Lawrence R. Klein, *Department of Economics, University of Pennsylvania, Philadelphia, USA*

1. Historical Background for LINK
2. Basic Philosophy of Project LINK Model
 - 2.1. Country Coverage and Expansion
3. Solving the World System
4. New Directions for Project LINK

International Futures (IFS) Model**151**Barry Bernard Hughes, *Graduate School of International Studies, University of Denver, Denver, Colorado, USA*

1. International Futures (IFs) in Brief
2. History, Lineage, and Purposes
3. Basic Structure of Ifs
4. Using IFs to Analyze Sustainable Development
 - 4.1. Approach to Analysis
 - 4.2. Aggregate Demographic and Economic Transformations
 - 4.3. Food, Energy, Environment as Rough Patches on the Road to Sustainability
 - 4.3.1. Food
 - 4.3.2. Energy
 - 4.3.3. Environment
 - 4.3.4. Concluding Comments on Sustainability
5. Using IFs for Analysis of Social and Political Change
 - 5.1. Domestic Social Change
 - 5.2. Global Political Change
6. IFs as a Tool to Analyze Long-term Change
7. Anticipated Development Directions for International Futures (IFs)

The Futures of Global Interdependence (FUGI) Model**176**Akira Onishi, *Soka University Institute for Systems Science, Tokyo, Japan*

1. Purposes, Structure, and Function of the FUGI Global Model 9.0 M200 / 80
 - 1.1. Purpose
 - 1.2. Model Structure and Function
2. Data-Supporting Expert System and Model Management in Hardware and Software
3. The Human Intelligence System of Estimating Structural Parameters of the Model
4. Dynamic Simulation Testing for Verification, Validation, and Accreditation of the Model
 - 4.1. Dynamic Simulation Testing
 - 4.2. Testing for Verification, Validation, and Accreditation of the Model
5. The Baseline Projection Using the FUGI Global Model, 1996–2015
 - 5.1. Outlook for Global Economic Development and CO₂ Emissions, 1996–2015
 - 5.1.1. Global Economy
 - 5.1.2. Global CO₂ Emissions
6. Alternative Policies and Scenario Simulations on Sustainable Development
 - 6.1. Global Challenge for Sustainable Development: Policy Exercise of CO₂ Cutbacks: Technology Advancement Scenario
 - 6.2. Global Economy under CO₂ Cutbacks Policy Exercise
 - 6.3. CO₂ Emissions under CO₂ Cutbacks Policy Exercise
 - 6.3.1. Graphs on Real GDP growth Rates and CO₂ Emissions: Baseline and Technology Advancement Scenario
7. Conclusion

The Revised Minimum Standard Model Extended (RMSM-X)	246
Thilak Ranaweera, <i>Development Data Group, World bank, USA</i>	
Jos Verbeek, <i>Development Data Group, World bank, USA</i>	

1. Introduction
2. Purpose, Structure, and Function of the RMSM-X Model
3. Basic and Extended Versions of the Revised Minimum Standard Model
 - 3.1. RMSM-X: The World Bank's Main Vehicle for Macroeconomic Projections
 - 3.2. Behavioral Structure of the Model
 - 3.3. Behavioral Extensions
 - 3.4. Solution Procedures of the Model ("Closure" Rules)
 - 3.5. The Debt Module
4. Data-Supporting System of the Model
 - 4.1. Data Requirements and Data Sources
 - 4.2. Accounting Concepts and Data Conflicts
 - 4.2.1. Accrual versus Cash
 - 4.2.2. Due versus Cash
 - 4.2.3. Data Conflicts
 - 4.2.4. Connection with Macroeconomic Data
5. Model Management in Hardware, Software, and Human Interface
 - 5.1. Special Menus and Toolbars
 - 5.2. Organization of the RMSM-X Modules
6. Verification, Validation, and Accreditation of the Model
 - 6.1. The Consistency Framework in the Base Year
 - 6.2. Accounting Consistency of the RMSM-X Projections
 - 6.3. The Economic Consistency of the RMSM-X Projections
7. Future Simulations Using the Model
 - 7.1. General Assumptions
 - 7.2. Sector-wise Assumptions
 - 7.2.1. Capital and Financial Account
 - 7.2.2. Monetary Sector Assumptions
 - 7.2.3. National Accounts Assumptions
 - 7.2.4. Government Sector Assumptions
 - 7.2.5. External Debt
 - 7.2.6. Simulations of the Model using the Private Closure
 - 7.2.7. Foreign Debt
 - 7.2.8. Balance of Payments
 - 7.2.9. Fiscal Accounts
 - 7.2.10. Monetary Sector
8. Uses of the Model within the World Bank
 - 8.1. Country Assistance Strategy
 - 8.2. Structural Adjustment Lending
 - 8.3. Unified Survey
 - 8.4. Feasibility and Sustainability
9. Measuring External Sustainability
10. Conclusion

VOLUME II

The Threshold 21: National Sustainable Development Model

1

Weishuang Qu, *Millennium Institute, USA*
 Gerald O. Barney, *Millennium Institute, USA*
 Douglas Symalla, *Millennium Institute, USA*
 Leslie Martin, *Millennium Institute, USA*

1. Purpose, Structure, and Function of the Model
 - 1.1. Purpose
 - 1.2. Structure
 - 1.2.1. Dynamics
 - 1.2.2. Economy
 - 1.2.3. Population
 - 1.2.4. Agriculture
 - 1.2.5. Industry and Services
 - 1.2.6. Energy
 - 1.2.7. Environment
 - 1.2.8. Social Sector
 - 1.2.9. Technology
 - 1.2.10. Rest of World
 - 1.2.11. Other Sectors in Threshold 21
 - 1.2.12. Indicators in Threshold 21
 - 1.2.13. Functions
2. Data-Supporting System of the Model
3. Model Management in Hardware, Software, and Human Interface
4. Verification, Validation, and Accreditation of the Model
5. Future Simulations Using the Model
6. Using the Model to Investigate Changes in Policies
 - 6.1. Area-Specific Policy Scenarios
 - 6.2. Integrated Policy Scenarios
7. Sustainability Investigations Using the Model

Global Modeling and Reasoning Support Tools

30

Sree N. Sreenath, *Computer Science, Case Western Reserve University, Cleveland, Ohio, USA*

1. Introduction
 - 1.1. Organization
2. The World as a Complex Cybernetic System
 - 2.1. Characteristics of Global Issues: Complexity and Uncertainty
 - 2.2. State Transition versus Goal-Seeking Paradigm
 - 2.3. Complexity
 - 2.4. Deconstruction of a System and Hierarchical Representation
3. Philosophy of GLOBESIGHT
 - 3.1. Basic Principles
 - 3.1.1. Scientific Integrity
 - 3.1.2. Transparency of Models
 - 3.1.3. Focus on Integration of Models
 - 3.1.4. Participatory “Symbiotic” Reasoning Process
4. GLOBESIGHT - A Reasoning Support Tool
 - 4.1. GLOBESIGHT Architecture
 - 4.1.1. Information Base
 - 4.1.2. Models Base
 - 4.1.3. Issues Base
 - 4.1.4. Functionality Base
 - 4.2. GLOBESIGHT - Implementation Details

5. Scenario Analysis
6. Example Case Studies Developed using GLOBESIGHT
 - 6.1. Nile Basin Countries
 - 6.2. Aral Sea Basin
 - 6.3. UNESCO GENIE Joint Participatory Exercises

Integrated Assessment: Implications of Uncertainty

50

Hadi Dowlatabadi, *Carnegie Mellon University, Pittsburgh, Pennsylvania, USA*

1. Defining Uncertainty in Integrated Assessments
 - 1.1. Integrated Assessments and Integrated Assessment Models
 - 1.2. Different Categories of Uncertainties
 - 1.3. Links between Integrated Assessment and Uncertainty
2. Implications of Uncertainty for Policy Formation
 - 2.1. Uncertainty, Its Resolution, and the Policy Imperative
 - 2.2. Uncertainty about Framing Questions and Adopting Decision Rules
3. Implications of Uncertainty for Integrated Assessments
 - 3.1. Accuracy and Precision
 - 3.2. Parameter, Structural, and Paradigm Uncertainty
4. Methodologies for Informing Decisions
 - 4.1. Dominant Choices
 - 4.2. Value of Information
 - 4.3. Hedging Strategies
 - 4.4. Prognostic Policy Analysis
5. Use of IA Models as Diagnostic Tools

Development Planning: PANGAEA-Gaming Simulation Exercise for Training in Sustainable Regional Development

63

Hideki Kaji, *Professor of Faculty of Policy Management, Keio University, Fujisawa, Kanagawa, Japan*
 Yasunori Minagawa, *Coordinator of Planning Technology Development Office, United Nations Centre for Regional Development (UNCRD), Nagoya, Japan*
 Hidehiko Kanegae, *Assistant Professor, Department of Social Engineering, Tokyo Institute of Technology, Tokyo, Japan*

1. General Features of PANGAEA
 - 1.1. How PANGAEA was born
 - 1.2. Objectives of PANGAEA
 - 1.3. Features of PANGAEA
 - 1.4. Sustainable development in PANGAEA
2. Modeling Institutional Framework
 - 2.1. Institutional setup
 - 2.2. Administrative structure and roles for the players
3. Gaming Procedures of PANGAEA
 - 3.1. Planning process
 - 3.2. Financing Sources of Projects
 - 3.3. Project list in PANGAEA
 - 3.4. Evaluation
 - 3.4.1. Achievement Score
 - 3.4.2. Financial Performance Index
 - 3.4.3. Sustainability Index
 - 3.5. Step-wised procedure of PANGAEA gaming
4. Simulation Model of PANGAEA
 - 4.1. Overview of Pan/Decs
 - 4.2. Global Economy Sector (SUB/GLOB)
 - 4.3. Economic Activities Sector (SUB/ECON)
 - 4.3.1. Agriculture

- 4.3.2. Industry
- 4.3.3. Commerce and Tourism
- 4.3.4. Construction
- 4.4. Income & Consumption Sector (SUB/INCM)
- 4.5. Infrastructure Sector (SUB/INFR)
 - 4.5.1. Transportation and Time Distance
 - 4.5.2. Power Plants
- 4.6. Population Sector (SUB/POP)
 - 4.6.1. Population
 - 4.6.2. Housing
- 4.7. Land Use Sector (SUB/LAND)
- 4.8. Energy and Resources Sector (SUB/ENGY)
- 4.9. Environment Sector (SUB/ENV)
 - 4.9.1. Air pollution
 - 4.9.2. Water quality
 - 4.9.3. Solid waste disposal and recycling
 - 4.9.4. Natural Hazards
- 4.10. Regional Tax Sector (SUB/TAX)
- 4.11. National Financial Sector (SUB/GFIN)
- 5. Gaming preparations
 - 5.1. Required facilities
 - 5.2. How to Start the Game

Technology Assessment: Dynamic New Earth 21 Model

105

Kenji Yamaji, *School of Engineering, University of Tokyo, Japan*

- 1. Introduction
- 2. Outline of the *Dynamic New Earth 21 Model*
 - 2.1. Basic Framework
 - 2.2. Energy Demand and Saving in Final Consumption Sectors
 - 2.3. Energy Supply
 - 2.4. CO₂ Recovery, Disposal, and Recycling
 - 2.5. Other CO₂ Abatement Technologies
 - 2.6. Representation of Carbon Cycle Model
- 3. Mathematical Formation of the *Dynamic New Earth 21 Model*
- 4. Global Energy System with CO₂ Concentration Limit of 550 ppm
 - 4.1. Policy Scenario
 - 4.2. Structure of the Future Global Energy System
 - 4.3. CO₂ Emission and Disposal
 - 4.4. Contribution of the Technological Options by Type
- 5. Concluding Remarks

Economy-Energy-Environment: The 3E COMPASS Model

131

Kimio Uno, *Faculty of Policy Management, Keio University, Shonan Fujisawa Campus, Japan*

- 1. Purpose
- 2. Data Sources and Object-Oriented Approach
 - 2.1. Empirical Data
 - 2.1.1. Time series Input-Output Tables
 - 2.1.2. International Financial Statistics
 - 2.1.3. Time-series Trade Matrices
 - 2.1.4. Energy Balances
 - 2.2. Object-Oriented Database Design
- 3. Model Structure
 - 3.1. Regional Coverage of the COMPASS Model
 - 3.2. Structure of COMPASS

- 3.2.1. The Input-Output Models
- 3.2.2. The Macro-Finance Models
- 3.2.3. The Trade Model
- 3.2.4. The Energy-Environment Models
- 3.3. Object-Oriented Approach to Model Building
- 4. Simulation Logic
 - 4.1. Lifestyle
 - 4.2. Alternative Technology
 - 4.3. Tradable Permits
- 5. Further Comments on the Project

Refugees and Social Justice: The GEWS (Global Early Warning System) Model **153**
 Akira Onishi, *Soka University Institute for Systems Science, Tokyo, Japan*

- 1. Introduction: FUGI-GEWS System Structure
- 2. Selected Indicators of GEWS
- 3. Monitoring Early Warning for Refugees and Social Justice
- 4. Conclusion

Global Information and Early Warning System on Food and Agriculture (GIEWS) **169**
 Abbur Rashid, *Food and Agriculture Organization of the United Nations, Rome, Italy*

- 1. What Does GIEWS Do?
- 2. Information Sharing and Management
 - 2.1. Forging Institutional Links
 - 2.2. Reflecting Users Needs
 - 2.3. Supporting Local Systems
 - 2.4. Developing Databases
 - 2.5. Rapid Assessment Missions
- 3. Methods and Tools
 - 3.1. Responding to Change
 - 3.2. Global Monitoring
 - 3.3. National Level Monitoring
 - 3.4. Subnational Food Security Monitoring
- 4. Publishing and Dissemination

Index **183**

About EOLSS **189**

VOLUME III

The Regional Air Pollution Information and Simulation (RAINS) Model **1**
 Markus Amann, *International Institute for Applied Systems Analysis (IIASA), Laxenburg, Austria*

- 1. Introduction
- 2. Model Description
 - 2.1. Scenarios of Anthropogenic Activities
 - 2.2. Emission Estimates
 - 2.3. Emission Control Options and Costs
 - 2.3.1. Options for Reducing SO₂ Emissions and their Costs
 - 2.3.2. Options for Reducing NO_x Emissions from Stationary Sources and their Costs
 - 2.3.3. Options for Reducing VOC Emissions from Stationary Sources and their Costs

- 2.3.4. Options for Reducing Emissions from Mobile Sources and their Costs
- 2.3.5. Options for Reducing Ammonia Emissions and their Costs
- 2.4. Modeling the Dispersion of Pollutants in the Atmosphere
 - 2.4.1. The Long-range Transport of Sulfur and Nitrogen Compounds
 - 2.4.2. Modeling Ozone Formation
- 2.5. Quantifying Environmental Sensitivities: The Concept of Critical Loads and Critical Levels
- 2.6. Optimization
 - 2.6.1. Decision Variables
 - 2.6.2. Auxiliary Variables
 - 2.6.3. Outcome Variables
 - 2.6.4. Constraints
 - 2.6.5. Goal Function
 - 2.6.6. Sectoral Cost Curves as Input to the Optimization
- 3. Analytical Support for International Negotiations
 - 3.1. The Second Sulfur Protocol of the UN/ECE Convention on Long-range Transboundary Air Pollution
 - 3.2. The Second NO_x Protocol of the UN/ECE Convention on Long-range Transboundary Air Pollution
 - 3.3. The Approach to Air Quality Control of the European Union
- 4. Example Calculations
 - 4.1. An Optimized Scenario For Meeting Environmental Interim Targets In Europe
 - 4.2. Scenarios with Uniform Emission Reductions

Integrated World Model (IWM) (Regional World IV)

29

Frederick O. Kile, *Microtrend, Appleton, Wisconsin, USA*

- 1. Problem Statement
- 2. Purposes of Project
- 3. Project Assumptions
- 4. Model Assumptions
- 5. Description of the Integrated World Model (IWM)
 - 5.1. Model Characteristics
 - 5.2. Two Classes of Global Models
 - 5.2.1. Free-Running Models
 - 5.2.2. Recalibrated Models
 - 5.2.3. Using IWM as a Free-running Model
 - 5.2.4. Using IWM as a Recalibrated Model
 - 5.2.5. Comments on the Usefulness of Free-running Models vis-à-vis Recalibrated Models
- 6. Project Learnings
- 7. Related Learnings
- 8. Model Results
 - 8.1. Main Results
 - 8.1.1. The Most Desirable Future (lowest probability of severe instability)
 - 8.1.2. The Most Probable Future
 - 8.1.3. The Most Important Single Piece of Policy
 - 8.1.4. Energy
 - 8.1.5. A Changing Global Economy
 - 8.1.6. National Versus Global Thinking
 - 8.1.7. Other Results

SIMEARTH: A Great Toy

47

Fred Haslam, *Vancouver, Washington, USA*

- 1. Introduction
- 2. Overview
 - 2.1. Modeling Methods

- 2.2. Responsive Updates
- 2.3. Approximations
- 3. Lithosphere Model
 - 3.1. Driving Events
 - 3.2. Collision and Smoothing
- 4. Aquasphere Model
 - 4.1. Ocean Regions
 - 4.2. Ocean Temperature
 - 4.3. Ocean Motion
- 5. Atmosphere Model
 - 5.1. Atmospheric Composition
 - 5.2. Atmosphere Motion
 - 5.3. Atmosphere Temperature
 - 5.4. Atmosphere Moisture
- 6. Biosphere Model
 - 6.1. Biomes
 - 6.2. Animals
 - 6.3. Evolutionary Trends
- 7. Civilization Model
 - 7.1. Spreading Civilization
 - 7.2. Collecting and Spending Energy
 - 7.3. Civilized Events
- 8. Conclusions

Global Recall and Networld Game: Global Access to Global Models	68
<i>Medard Gabel, World Game Institute, Philadelphia, Pennsylvania, USA</i>	

- 1. Introduction/Overview
- 2. Global Recall: A Tool for Global Problem Solving
- 3. Global Recall: The Model
- 4. NetWorld Game: The Internet as Tool for Global Problem Solving
- 5. NetWorld Game Operations Center
- 6. NetWorld Game Model: The Budget Page
- 7. NetWorld Game's Econometric Model
- 8. Future Developments

The EITF World Econometric Model: A Multisectoral Approach for Output and Foreign Trade	83
<i>Shuntaro Shishido, Economic Research Institute for Northeast Asia, Niigata-City, Japan</i>	

- 1. Structure of the Model
- 2. Policy Scenarios
 - 2.1. Joint Demand Promotion by the US and Japan
 - 2.2. Impacts of Japan's Recession
 - 2.3. A Joint Policy Scenario for Demand Promotion in Northeast Asia
 - 2.4. Asian Currency Crisis Scenario and Japan's ODA
- 3. Future Research

The FUGI Global Model 9.0 M200	103
<i>Akira Onishi, Soka University Institute for Systems Science, Hachioji-shi, Tokyo, Japan</i>	

- 1. Model Structure
- 2. Population System
- 3. Economic Development System
 - 3.1. Labor and Production at Constant Prices

- 3.2. Expenditures on GDP at Constant Prices
- 3.3. Income Distribution—Profits and Wages
- 3.4. Prices
- 3.5. Expenditures on GDP at Current Prices
- 3.6. Money, Interest Rates, and Financial Assets
- 3.7. Government Finance
- 3.8. International Balance of Payments
- 3.9. International Finance
- 3.10. Foreign Exchange Rates
- 4. Computer Hardware and Software
- 5. Some Examples of Estimated Parameters of the Model
 - 5.1. Global Economy
 - 5.2. Global Population and Employment
 - 5.3. Increasing International Per Capita Income Disparity
 - 5.4. Global CO₂ Emissions
 - 5.5. Improving Life Expectancy at Birth
- 6. Selected Indicators of Quality of Life
- 7. Monitoring and Early Warning for Quality of Life Crises
- 8. Conclusion

Methodologies of Modeling and Simulations of Global Systems	180
<i>Akira Onishi, Centre for Global Modeling, Japan</i>	

- 1. Modeling Methodologies
- 2. Essentials of Mathematical Modeling for Complex Systems
- 3. Essentials of Simulation for Complex Global Systems
 - 3.1. Alternative Scenario Simulations. Policy Exercise: Simulations of the Asian Financial Crisis
 - 3.2. Alternative Scenario Simulations. Policy Exercise: Information Technology Innovation Scenario
- 4. Simulation Techniques and Software
- 5. Conclusion
