

CONTENTS

WATER AND HEALTH

Water and Health - Volume 1

No. of Pages: 364

ISBN: 978-1-84826-182-2 (eBook)

ISBN: 978-1-84826-632-2 (Print Volume)

Water and Health - Volume 2

No. of Pages: 538

ISBN: 978-1-84826-183-9 (eBook)

ISBN: 978-1-84826-633-9 (Print Volume)

CONTENTS

VOLUME I

Water and Health	1
Willie O.K. Grabow, <i>University of Pretoria, South Africa</i>	

1. Introduction
2. Water-Related Diseases
 - 2.1. Pathogenic micro-organisms
 - 2.1.1. Emerging and re-emerging infectious diseases
 - 2.1.2. Zoonoses
 - 2.1.3. Protozoan parasites
 - 2.1.4. Bacteria
 - 2.1.5. Helminths
 - 2.1.6. Potential waterborne zoonoses
 - 2.1.7. Outbreaks of water-related diseases
 - 2.2. Hazardous chemical compounds
 - 2.2.1. Acute health effects of chemical compounds in water
 - 2.2.2. Chronic health effects of chemical compounds in water
 - 2.2.3. Conclusions
3. Public Health Impact of Water-Related Diseases
 - 3.1. Burden of disease
 - 3.1.1. Schistosomiasis
 - 3.1.2. Trachoma
 - 3.1.3. Regional patterns
 - 3.2. Discussion
4. Control of Water-Related Diseases
 - 4.1. General principles
 - 4.2. Goals of water treatment and disinfection
 - 4.3. Disinfectants and disinfection byproducts
5. Water Treatment Processes
 - 5.1. General principles
 - 5.2. Unconventional sources of water supply
 - 5.2.1. Water reclamation
 - 5.2.2. Desalination of seawater
 - 5.3. Low cost prevention strategies
 - 5.3.1. Waterborne transmission
 - 5.3.2. Future trends
 - 5.4. Point-of-use water treatment for home and travel
 - 5.5. Bottled water supplies
6. Water Quality Control
 - 6.1. Diseases associated with treated drinking-water supplies
 - 6.2. New strategies for water quality control
 - 6.3. Constraints to improving water and sanitation services
7. Utilization of Water and Related Resources
 - 7.1. Groundwater
 - 7.2. Aquaculture and mariculture
 - 7.3. Multiple uses and human health
8. Future Priorities

Classification of Water-Related Disease	66
Rozalind Stanwell-Smith, <i>Royal Institute of Public Health, UK (formerly Consultant Epidemiologist, Water Related Disease Surveillance, Communicable Disease Surveillance Centre, Public Health Laboratory Service, England, UK)</i>	

1. Introduction
2. Definitions and systems for classifying water related disease
 - 2.1. Essential Components for the Classification
 - 2.2. Definition of Water-related Disease
 - 2.3. Categories of Water-related Disease
 - 2.4. Type of water exposure
 - 2.5. Cause and evidence: important issues in classifying water-related disease
 - 2.6. Burden of Proof in the Case of Water-related Disease
3. Water-related infection
4. Non-infectious disease related to water
5. Water associated disease
6. Implications for water related surveillance

Burden of Disease: Current Situation and Trends

87

Annette Pruss-Ustun, *World Health Organization, Geneva, Switzerland*

Lorna Fewtrell, *Centre for Research into Environment and Health, Crewe, UK*

1. Introduction
2. Water-related health outcomes
3. Trends in risk factors
4. Trends in health outcomes
 - 4.1. The Disability-Adjusted Life Year
5. Burden of disease
 - 5.1. Infectious diarrhea
 - 5.1.1. Risk factor methodology for assessing disease burden
 - 5.1.2. Diarrhoeal disease burden
 - 5.2. Schistosomiasis
 - 5.3. Trachoma
 - 5.4. Dracunculiasis
6. Regional Patterns
7. Discussion

Transmission and Prevention of Water-Related Diseases

104

Johathan T. Macy, *National Center for Infectious Diseases, Centers for Disease Control and Prevention, USA*

Robert E. Quick, *National Center for Infectious Diseases, Centers for Disease Control and Prevention, USA*

1. Introduction
2. Water-borne Diseases
 - 2.1. Transmission
 - 2.2. Prevention
 - 2.2.1. Piped Water and Sewage Systems
 - 2.2.2. Disposal of Human Waste
 - 2.2.3. Increasing Water Quantity
 - 2.2.4. Personal Hygiene
 - 2.2.5. Point-of-use Treatment and Safe Storage
 - 2.2.6. Solar Disinfection
 - 2.2.7. Disinfection by Boiling
 - 2.2.8. Aeration
 - 2.2.9. Coagulation and Flocculation
 - 2.2.10. Combined flocculation, and chlorination
 - 2.2.11. Desalination
 - 2.2.12. Filtration
 - 2.2.13. Filtration and Chlorination
 - 2.2.14. Storage and Settling

- 2.2.15. Straining
- 2.2.16. Ultraviolet Light Disinfection
- 3. Water-washed Diseases
 - 3.1. Transmission
 - 3.2. Prevention
 - 3.2.1. Increasing Water Quantity
 - 3.2.2. Personal Hygiene
 - 3.2.3. Disposal of Human Waste
- 4. Water-based Diseases
 - 4.1. Transmission
 - 4.2. Prevention
- 5. Water-related Insect Vector Diseases
 - 5.1. Transmission
 - 5.2. Prevention
- 6. Future Trends
 - 6.1. Alternative Technologies
 - 6.2. Implementation Strategies
 - 6.2.1. Community Participation
 - 6.2.2. Partnerships
 - 6.2.3. Alternative Financing Schemes
 - 6.3. Behavior Change Methods
 - 6.4. Integrated Approaches

Goals of Water Treatment and Disinfection: Reduction in Morbidity and Mortality 122
Pierre Payment, *INRS- Institut Armand-Frappier, Institut National de la recherche scientifique, Canada*

- 1. Introduction
- 2. Piped water networks and waterborne disease
- 3. The diseases
 - 3.1. The microorganisms
 - 3.2. Prevalence of gastrointestinal illnesses
 - 3.3. Drinking water associated morbidity and mortality
- 4. Water treatment: control of pathogens
 - 4.1. Health effects of drinking water: observations and causes
 - 4.2. Management of health risk through water treatment
 - 4.2.1. Risk analysis
 - 4.2.2. Hazard Analysis and Control at Critical Points (HACCP)
 - 4.3. Efficacy of some water treatment processes
 - 4.3.1. Source water and treatment selection
 - 4.3.2. Disinfection
 - 4.3.2.1. Chlorine based disinfectants
 - 4.3.2.2. Ozone
 - 4.3.2.3. Ultraviolet radiation
 - 4.3.2.4. Solar disinfection
 - 4.3.3. Granular media filtration
 - 4.3.4. Membrane filtration
 - 4.3.5. Advanced water treatments

Diseases Associated with Drinking Water Supplies that Meet Treatment and Indicator Specifications 134
Pierre Payment, *INRS- Institut Armand-Frappier, Institut National de la recherche scientifique, Canada*

- 1. Introduction
- 2. Indicators of water quality and public health
- 3. Public health surveillance of waterborne disease
- 4. Epidemiologic studies of endemic waterborne disease

- 4.1. Canadian studies
- 4.2. Australian and American studies
- 4.3. Waterborne disease and turbidity
5. Etiology and causes of endemic water-attributable disease
 - 5.1. Source water quality
 - 5.2. Disinfection-resistant pathogen
 - 5.3. Distribution system related events
6. Quantitative microbial risk assessment
7. Costs of undetected waterborne diseases
8. Conclusion

New and Emerging Waterborne Infectious Diseases

147

Wanda Markotter, *Department of Microbiology and Plant pathology, University of Pretoria, South Africa*
Louis H. Nel, *Department of Microbiology and Plant pathology, University of Pretoria, South Africa*

1. Infectious diseases
2. New, emerging, re-emerging and resurgent infectious diseases
3. Waterborne infectious diseases
4. Viral agents
 - 4.1. Caliciviruses
 - 4.2. Enteroviruses
 - 4.3. Astroviruses
 - 4.4. Hepatitis E-like viruses
5. Bacterial agents
 - 5.1. E coli
 - 5.2. Campylobacter
 - 5.3. Helicobacter
 - 5.4. Legionella
 - 5.5. Non-tuberculosis Mycobacterium
 - 5.6. Pseudomonas
 - 5.7. Shigella
 - 5.8. Vibrio cholerae
6. Protozoal agents
 - 6.1. Cryptosporidium
 - 6.2. Cyclospora
 - 6.3. Giardia
 - 6.4. Toxoplasma
 - 6.5. Acanthamoeba
 - 6.6. Isospora
7. Concluding Remarks

Future Needs and Priorities for Drinking Water and Health

171

Timothy E. Ford, *Department of Microbiology, Montana State University, USA*

1. Introduction
2. Risk Assessment
3. The Pathogens
4. The phenomenon of "new disease"
5. Biofilms
6. Chemicals
7. Gene Arrays
8. Future needs and priorities – conclusion

Health Impact and Economic Costs of Poor Water and Sanitation

193

Guy Hutton, *Water and Sanitation Program, World Bank, USA*

1. Introduction
2. Health impact
3. Economic costs of poor water and sanitation
 - 3.1. Impact on the health sector
 - 3.2. Impact on households afflicted with disease
 - 3.3. Other impacts on households of improving water and/or sanitation facilities
 - 3.4. Impact on industry, agriculture and private enterprise
 - 3.5. Global estimates of economic costs of poor water and sanitation
 - 3.6. Global estimates of economic benefits of improved water and sanitation
4. Discussion

Water Safety Plans for Water Technologies

210

Samuel Godfrey, *Water and Environmental Sanitation Specialist, UNICEF, India*

S. Wate, *Environmental Impact Risk Assessment Division, NEERI, India*

P. Labhassetwar, *NEERI, India*

1. Introduction
 - 1.1. Global water quality history
 - 1.2. The WHO and water quality
 - 1.3. Water Safety Plans and Water Technologies
2. Application of Water Safety Plans
 - 2.1. Drinking Water Safety Plans
 - 2.2. Greywater safety plans
 - 2.2.1. Greywater safety plans in India
3. System description
4. Hazard Assessment
5. Greywater reuse hazard assessment
6. Matrix Development
7. Monitoring and Maintenance

Hygiene Promotion

222

John Hubley, *Leeds Metropolitan University, Leeds, UK*

1. Introduction
 - 1.1. Terminology
 - 1.2. The importance of hygiene promotion
2. Overviews of hygiene promotion
 - 2.1. Component activities of hygiene promotion
 - 2.2. Planning process for hygiene promotion
3. Situation analysis
 - 3.1. General information required in situation analysis
 - 3.2. Identification of target hygiene practices
 - 3.3. Community participation in assessing needs
4. Planning and implementation of hygiene promotion
 - 4.1. Service improvement component
 - 4.2. Advocacy component
 - 4.3. Health education component
 - 4.3.1. Who should it be directed at?
 - 4.3.2. Who should carry out the health education?
 - 4.3.3. What should the health education consist of?
 - 4.3.4. How should the education be carried out?
5. Monitoring and evaluation of hygiene promotion
6. Conclusions

Institutional Issues in the Delivery of Water and Sanitation Services**246**Michael Rouse, *Independent International Advisor and Distinguished Research Associate, University of Oxford, UK*

1. Introduction
2. Key Elements for Sustainable Water Services
 - 2.1. Governance Structures
 - 2.2. Key Policy Issues
 - 2.2.1. Separation of Functions
 - 2.2.2. Viable Utility Size and Centralization versus Decentralization Issues
 - 2.2.3. Standards, Monitoring and Enforcement
 - 2.2.4. Investment and Cost Recovery
 - 2.2.5. Integration of Water and Wastewater Planning and Management
 - 2.3. Stimulating Improved Performance
 - 2.4. Economic Regulation and Planning
 - 2.5. Public Participation
3. Barriers to Sustainable Water Services
 - 3.1. Political Interference in Operations
 - 3.2. Inadequate Cost Recovery from Charges
 - 3.3. Inappropriate Provisions for the Poor
4. The Futile Public Private Argument
5. Some Developing Issues
 - 5.1. The Ageing Infrastructure
 - 5.2. Water Resources and Water Re-use
 - 5.3. The Use of Energy in Providing Water Services

Economics and Financing in the Water Sector**266**Renato Parena, *Chief Financial Officer, Gruppo Societa Metropolitana Acque Torino Spa, Italy*

1. Water Pricing
2. Impacts of water scarcity and externalities costs
3. Key factors to speed the water business change
4. A growing industry needs comparing with peers
5. Water services financing and management: new roles for the public and private sectors

Index**293****About EOLSS****299****VOLUME II****Zoonoses Acquired through Drinking Water****1**Rachel M. Chalmers, *UK Cryptosporidium Reference Unit, NPHS Microbiology Swansea, Singleton Hospital, Swansea, UK*

1. Introduction
2. General issues of zoonotic disease acquired through drinking water
3. Zoonotic Protozoa
 - 3.1. *Cryptosporidium*
 - 3.2. *Giardia*
 - 3.3. *Toxoplasma gondii*
4. Zoonotic bacteria
 - 4.1. *Campylobacter*
 - 4.2. Verotoxin-producing *E. coli* (VTEC) O157 and other VTEC serogroups

- 4.3. *Salmonella*
- 4.4. Other zoonotic bacteria
- 5. Zoonotic Helminths
 - 5.1. Dracunculiasis
 - 5.2. Trematodes: Schistosomes and flukes
- 6. Potential waterborne zoonoses
- 7. Conclusions

Microbiological Water Quality Assessment (Catchment to Tap)

17

J.E. Burgess, *Research Manager: Water Treatment Technology, Water Research Commission, Pretoria, Republic of South Africa*

B.I. Pletschke, *Senior Lecturer and Head of Biochemistry, Rhodes University, Grahamstown, Republic of South Africa*

- 1. Introduction
 - 1.1. The Route from Catchment to Tap
 - 1.2. Water Treatment
 - 1.2.1. Disinfection of Water
- 2. Microbiological Water Quality Indicators
 - 2.1. Bacteria
 - 2.2. Protozoa
 - 2.3. Viruses
 - 2.3.1. Bacteriophages
 - 2.3.2. Human Viruses
 - 2.4. Other Indicators of Water Quality
- 3. Microbiological Water Quality Guidelines
- 4. Methods of Assessment
 - 4.1. Bacteria
 - 4.1.1. Indicator Organisms
 - 4.1.2. Heterotrophic Plate Counts
 - 4.2. Protozoa
 - 4.3. Viruses
- 5. Water Quality Management
- 6. Future Trends and Perspectives
 - 6.1. Enzyme-Based Methods
 - 6.2. Molecular Methods
 - 6.2.1. Immuno-Based Techniques
 - 6.2.2. Nucleic Acid-Based Techniques
 - 6.2.3. Biosensors
 - 6.3. Concluding Remarks

Epidemiologic Studies of Disinfectants & Disinfectant By-Products

40

Gunther F. Craun, *Gunther F. Craun & Associates Staunton, Virginia, USA*

Rebecca L. Calderon, *National Health and Environmental Effects Research Laboratory, U.S. Environmental Protection Agency, Chapel Hill, North Carolina, USA*

- 1. Introduction
- 2. Epidemiologic Study Designs
- 3. Uncertainty of Risk Estimates
 - 3.1. Random Error
 - 3.2. Systematic Error
 - 3.3. Confounding
- 4. Cancer Risks
 - 4.1. *Cohort Studies*
 - 4.2. Case-Control Studies
 - 4.2.1. Bladder Cancer and Chlorine Disinfection

- 4.2.2. Bladder Cancer and Chloramine Disinfection
- 4.2.3. Bladder Cancer and Ozone Disinfection
- 4.2.4. Colon and Rectal Cancer
- 4.2.5. Other Cancers
- 4.3. Meta- and Pooled Analyses
 - 4.3.1. Meta-analysis Bladder and Rectal Cancers
 - 4.3.2. Meta-analysis Bladder Cancer
 - 4.3.3. Pooled Analysis Bladder Cancer
- 4.4. Summary of Cancer Risks
 - 4.4.1. Melanoma and Pancreatic, Brain, and Lung Cancers
 - 4.4.2. Colon and Rectal Cancers
 - 4.4.3. Bladder Cancer
- 5. Adverse Reproductive and Developmental Outcomes
 - 5.1. Cross-sectional Studies
 - 5.2. Cohort Studies
 - 5.3. Case-Control Studies
 - 5.4. Weight-of-Evidence Analysis
 - 5.5. Summary of Reproductive Risks
- 6. Cardiovascular Risks
 - 6.1. Cross-Sectional Study
 - 6.2. Cohort Studies
 - 6.3. Clinical Studies
 - 6.4. Summary of Cardiovascular Risks
- 7. Other Adverse Health Effects
 - 7.1. Chlorine Dioxide and Chlorite
- 8. Evaluating the Causality of Reported Associations
- 9. Discussion
- 10. Conclusions

Health Effects of Chemical Contamination of Drinking Water Supplies

72

John Fawell, *Independent Consultant on Drinking Water and Environment, UK*
 Adriana D Hulsmann, *Kiwa Water Research, Nieuwegein, The Netherlands*

- 1. Introduction
- 2. Naturally Occurring Chemical Contaminants
- 3. Contaminants Arising From Agriculture
- 4. Contaminants from Industry and Human Habitation
- 5. Contaminants Introduced in Drinking Water Treatment
- 6. Materials Used in Contact with Drinking Water
- 7. Water Safety Plans
- 8. New Sources of Drinking Water
- 9. Conclusions

Unconventional Sources of Water Supply

88

Pieter E. Odendaal, *Consultant, Pretoria, South Africa; Former Executive Director, South African Water Research Commission; Former President, International Water Association.*

- 1. Introduction
- 2. Water Reclamation
 - 2.1. Factors Promoting Water Reclamation
 - 2.2. Direct and Indirect Reuse
 - 2.3. Water Reclamation Technology
 - 2.4. Health Considerations in Water Reclamation
 - 2.5. Applications of Water Reclamation
 - 2.5.1. Agricultural Irrigation
 - 2.5.2. Groundwater Recharge

- 2.5.3. Industrial Reuse
- 2.5.4. Environmental and Recreational Reuse
- 2.5.5. Non-potable Urban Reuse
- 2.5.6. Potable Reuse
- 2.6. Public Acceptance
- 3. Desalination of Seawater
 - 3.1. Desalination Technology
 - 3.1.1. Multistage Flash
 - 3.1.2. Multi-effect Distillation
 - 3.1.3. Vapour Compression Distillation
 - 3.1.4. Reverse Osmosis
 - 3.1.5. Electrodialysis
 - 3.1.6. Freezing
 - 3.1.7. Membrane Distillation
 - 3.2. Quality of Product Water
 - 3.3. Comparison of Distillation Processes and Reverse Osmosis
 - 3.4. Dual Purpose Systems

Point-of-Use Water Treatment for Home and Travel

103

Joseph A. Cotruvo, *Joseph Cotruvo & Associates LLC; Washington, D.C., USA, and WHO/NSF*

Collaborating Centre for Drinking Water Safety and Treatment, Ann Arbor, MI, USA

Mark D. Sobsey, *University of North Carolina, Department of Environmental Sciences and Engineering, Chapel Hill, NC, USA*

- 1. Introduction
- 2. Potential Solutions for Small Communities
 - 2.1. Package Treatment Plants
 - 2.2. Slow-Sand Filtration (SSF)
 - 2.3. Roughing and Horizontal Flow Granular Media Filters
- 3. Point-of-Use and Personal Water Treatment
 - 3.1. Microbiologically Safe Water for Travelers
 - 3.1.1. Preventive Measures While Living or Traveling in Areas with Unsafe Drinking Water
 - 3.1.2. Drinking Water Disinfection Techniques for Small Quantities
 - 3.1.3. Individuals at risk
- 4. Water Treatment Technologies for Home Applications
 - 4.1. Water Filtration/Treatment Technologies
 - 4.2. Types of Small Water Filtration Units
 - 4.2.1. Point-of-Entry (POE) Systems
 - 4.2.2. Point-of-Use (POU) Systems
 - 4.3. Performance Descriptions
- 5. Conclusions

Treatment and Safe Storage of Water in Households Without Piped Supplies of Treated Water

124

Thomas F. Clasen, *Department of Infectious and Tropical Diseases, London School of Hygiene & Tropical Medicine, London WC1E 7HT, UK*

- 1. Introduction
- 2. Boiling
- 3. Chlorination
- 4. Solar Disinfection
- 5. Ceramic Filtration
- 6. Biosand (Intermittent Sand) Filters
- 7. Flocculation-Disinfection
- 8. Safe Storage
- 9. Cost and affordability

10. Acceptability, Affordability and Sustainability

Quantifying Health Risks in Wastewater Irrigation **138**

Duncan Mara, *School of Civil Engineering, University of Leeds, UK*

1. Introduction
2. Quantitative Microbial Risk Analysis
 - 2.1. Specimen QMRA Calculations
 - 2.2. Monte Carlo Risk Simulations
 - 2.3. Restricted Irrigation
 - 2.3.1. Exposure Scenario
 - 2.3.2. Risk Simulations
 - 2.4. Unrestricted Irrigation
 - 2.4.1. Exposure Scenario
 - 2.4.2. Risk Simulations
3. Post-treatment Health-protection Control Measures
4. Helminth Eggs
5. Wastewater Treatment

Impacts of Eutrophication on the Safety of Drinking- and Recreational Water **148**

Jennifer L Davis, *School of Public Health, Griffith University, Meadowbrook, Queensland, Australia*

Glen Shaw, *School of Public Health, Griffith University, Meadowbrook, Queensland, Australia*

1. Introduction
2. What is eutrophication?
3. Effects of eutrophication
 - 3.1. Stratified lakes
 - 3.2. Shallow lakes
 - 3.3. Problems for treatment
 - 3.4. Accumulations of scum
 - 3.5. Examples of eutrophic freshwater lakes
 - 3.6. Example of eutrophication effects on marine ecosystem
 - 3.7. Benefits of eutrophication
4. Cyanobacteria
 - 4.1. Requirements for growth
 - 4.2. Phosphorus cycle
 - 4.3. Nitrogen fixation
 - 4.4. Nitrogen : Phosphorus ratios
5. Health implications of eutrophication from consumption and recreational exposure
 - 5.1. Problems recognized from the presence of cyanobacteria
 - 5.2. Toxins
 - 5.3. Exposure pathways
 - 5.4. Drinking water examples
 - 5.5. Routes of exposure from recreational water
 - 5.5.1. Direct contact
 - 5.5.2. Ingestion or aspiration
 - 5.6. Other problems caused by eutrophication
 - 5.6.1. Elevated nitrate concentrations
6. Guideline values, policy and legislation
 - 6.1. Drinking water
 - 6.2. Recreational water
7. The Future
8. Conclusion

Groundwater and Public Health**172**

Jack V. Schijven, *Microbiological Laboratory for Health Protection, National Institute of Public Health and the Environment, The Netherlands*

Marylynn V. Yates, *Department of Environmental Sciences, University of California, Riverside, CA, USA*

1. Introduction
 - 1.1. Drinking Water Production
 - 1.2. Public Health Concerns Regarding Microbial Pathogens in Groundwater
 - 1.3. Regulatory Approaches
2. Subsurface Behavior of Viruses
 - 2.1. Removal Processes
 - 2.2. Colloid Filtration
3. Factors Affecting Attachment of Viruses to Soil
 - 3.1. Virus Type
 - 3.2. Soil Type
 - 3.3. pH
 - 3.4. Hydrophobic Interactions
 - 3.5. Ionic Strength
 - 3.6. Multivalent Cations
 - 3.7. Organic Matter
 - 3.8. Unsaturated Conditions
4. Factors Affecting Virus Inactivation in the Subsurface
 - 4.1. Introduction
 - 4.2. Temperature
 - 4.3. Particulate Matter and Soil
 - 4.4. Microbial Activity
 - 4.5. Unsaturated Conditions
5. Advection and Dispersion of Viruses
6. Model Viruses
 - 6.1. Introduction
 - 6.2. MS2
 - 6.3. PRD1
 - 6.4. Bacteriophage X174
 - 6.5. F-specific RNA Bacteriophages
7. Virus Removal by Soil Passage
8. Removal of Bacteria and Protozoa by Soil Passage
 - 8.1. Introduction
 - 8.2. Inactivation
 - 8.3. Attachment
 - 8.4. Straining
 - 8.5. Removal
9. Conclusions
10. Recommendations and Future Developments

Aquaculture and Mariculture**196**

Gail E. Greening, *Communicable Disease Group, Institute of Environmental Science and Research Ltd, Porirua, New Zealand*

Gillian D. Lewis, *School of Biological Sciences, University of Auckland, Auckland, New Zealand*

1. Introductory statement
2. Nature of the industry
3. Sources of fecal contamination impacting water quality
4. Pathogens contaminating molluscan shellfish and growing waters
 - 4.1. Enteric viruses
 - 4.1.1. Special risks associated with viral contamination of bivalve shellfish
 - 4.1.2. Epidemiology of Shellfish-associated Viral Gastroenteritis Outbreaks
 - 4.2. Bacteria

- 4.3. Human parasites
5. Toxins and chemicals
 - 5.1. Algal and bacterial blooms
 - 5.2. Other contaminants
6. Control strategies for bivalve mollusks
 - 6.1. Depuration and Relaying
 - 6.2. Heat Treatment
 - 6.3. Tracking and product traceback
 - 6.4. Legislation
7. Future prospects
 - 7.1. New approaches
 - 7.1.1. Improved detection and identification of viruses and microbes in shellfish
 - 7.1.2. Microbial risk assessments and predictive models
 - 7.1.3. Use of offshore waters for farming of mollusks
 - 7.1.4. Tank culture under controlled water quality regimes
 - 7.2. New pressures
 - 7.2.1. Impacts of fecal contamination of shellfish

Recreation in Natural Water Resources

213

R. M. McNinch, *Center for Water Sciences, Michigan State University, East Lansing, Michigan, USA*
 S. Singh, *Department of Fisheries and Wildlife, Michigan State University, East Lansing, Michigan, USA*
 J. B. Rose, *Department of Fisheries and Wildlife, Department of Crops and Soil Sciences, Michigan State University, East Lansing, Michigan, USA*

1. Introduction
2. Recreational Waters
3. Risks while Recreating
 - 3.1. Physical Risks
 - 3.2. Biological Risks
4. Guidelines and Standards for Monitoring
5. Pollution
6. Sources of Fecal Pollution
 - 6.1. Humans
 - 6.2. Septic Tank Systems
 - 6.3. Wastewater Treatment Plants
 - 6.4. Combined Sewer Overflows (CSOs) and Storm Sewers
 - 6.5. Wildlife and Pets
 - 6.6. Animal Feeding Operations (AFOs)
7. Reservoirs of Fecal Pollution and Toxins
 - 7.1. Sediments and Sand
 - 7.2. Seaweed and Algae
 - 7.3. Harmful Algal Blooms
8. Impacts and Events
 - 8.1. Global Climate Change
 - 8.2. High Density and Overuse
 - 8.3. Events
9. Protection of Recreational Water Sites
 - 9.1. Economic Importance
 - 9.2. Continued Monitoring
 - 9.3. Testing Methods and Advances
 - 9.4. Water pollution prevention
 - 9.5. Education
10. Recreating Safely

Dry Sanitation Technologies - Can They be Sustainable?

244

JN Bhagwan, *Water Research Commission, Pretoria, South Africa*

1. Introduction
2. Challenges Posed in the Up-scaling of Onsite Dry Sanitation Systems
 - 2.1. Pit Filling Rates and Outcomes of Research
3. What Happens in the Pit?
4. Implications of Research Findings on Long Term Sustainability of VIPs
5. A concerning social phenomenon related to dry sanitation
6. Conclusions

Constraints to Improving Water and Sanitation Services

257

Marcos von Sperling, *Senior Lecturer, Federal University of Minas Gerais, Brazil*

1. Introduction
2. Current status of water supply and sanitation coverage in the world
3. Main constraints and their consequences
 - 3.1. Economical and financial aspects
 - 3.2. Institutional aspects
 - 3.3. Political aspects
 - 3.4. Bureaucratic aspects
 - 3.5. Public health and environmental legislation aspects
 - 3.6. Technological aspects
 - 3.7. Cultural aspects
 - 3.8. Social aspects
 - 3.9. Educational aspects
 - 3.10. Information and data availability aspects
 - 3.11. Physical aspects
4. Towards the 21st Century

Human Health in Water Resources Development

278

Willem van der Hoek, *International Water Management Institute(IWMI), Colombo, Sri Lanka*

1. Introduction
2. The burden of water-related diseases
3. Vector borne diseases associated with water resources development
 - 3.1. Malaria
 - 3.2. Filariasis
 - 3.3. Schistosomiasis
 - 3.4. Japanese encephalitis
 - 3.5. Dengue
4. Water management for vector control
 - 4.1. Engineering and malaria control: Learning from the past 100 years
 - 4.2. Improved drainage in canal irrigation systems
 - 4.3. Alternate wet dry irrigation in rice cultivation
5. Health Impact Assessment
6. Water resources development and the urban environment
7. Conclusions

Toxic Cyanobacteria

299

Jennifer L Davis, *School of Public Health, Griffith University, Meadowbrook, Queensland, Australia*
 Glen Shaw, *School of Public Health, Griffith University, Meadowbrook, Queensland, Australia*

1. Introduction
2. What are cyanobacteria?
 - 2.1. Morphology
 - 2.2. Environment
 - 2.3. Competitive advantages over other phytoplankton

- 2.3.1. Light pigments
- 2.3.2. Nutrients
- 2.3.3. Nitrogen Fixation
- 2.3.4. Akinetes
- 2.3.5. Stratification
- 2.3.6. Gas vesicles
- 2.4. Cyanobacterial species
- 3. Causes of bloom
 - 3.1. The eutrophication process
 - 3.2. What favours cyanobacterial blooms?
 - 3.3. Climatic conditions which support growth of certain species
- 4. Toxins
 - 4.1. Hepatotoxins – Cyclic Peptides
 - 4.1.1. Microcystins
 - 4.1.2. Nodularins
 - 4.2. Neurotoxins – Alkaloids
 - 4.2.1. Anatoxin-a
 - 4.2.2. Homoanatoxin-a
 - 4.2.3. Anatoxin-a(s)
 - 4.2.4. Saxitoxins
 - 4.3. Cytotoxins – Alkaloids
 - 4.4. Endotoxins (Irritant toxins) – Lipopolysaccharides
 - 4.5. Dermatotoxins – Alkaloids
- 5. Human health effects from cyanobacteria
 - 5.1. Acute effects in humans
 - 5.2. Chronic effects in humans
 - 5.2.1. Hepatotoxins
 - 5.2.2. Neurotoxins
 - 5.2.3. Cytotoxins
 - 5.2.4. Dermatotoxins
- 6. Environmental effects of toxic cyanobacteria
 - 6.1. Species changes
 - 6.2. Eutrophic and hypereutrophic lakes – positives and negatives
 - 6.3. Bioaccumulation
 - 6.4. Animal poisonings
 - 6.4.1. Hepatotoxins
 - 6.4.2. Neurotoxins
 - 6.4.3. Dermatotoxins
- 7. Controls
 - 7.1. Environmental values
 - 7.2. Safe practices
 - 7.3. Measures to prevent bloom formation
 - 7.3.1. Reduce nutrients
 - 7.3.2. Problems with nutrient reduction
 - 7.3.3. Biomanipulation
 - 7.3.4. Disadvantages of biomanipulation
 - 7.4. Management of the source water
 - 7.4.1. Engineering
 - 7.4.1.1. Lake or dam construction
 - 7.4.2. Positioning of abstraction points
 - 7.4.3. Selection of intake depth
 - 7.4.4. Abstraction through an infiltration gallery
 - 7.4.5. Barriers to restrict scum movement
 - 7.4.6. Examples of control measures using best management practices
 - 7.5. Treatment
 - 7.5.1. Monitoring
 - 7.5.2. Problems with monitoring
 - 7.5.3. Treatment options

- 7.5.4. Potential problems of non-chemical treatment processes
- 7.5.5. Problems associated with chemical treatments
- 7.5.6. Problems associated with toxicity testing
- 7.6. Public information and awareness-raising
- 8. The future
 - 8.1. The future for treatment plants
 - 8.2. Biomedically interesting compounds
 - 8.3. Health issues
- 9. Conclusion

Multiple Uses of Water and Human Health

338

Willem van der Hoek, *International Water Management Institute(IWMI), Colombo, Sri Lanka*

- 1. Water for People, Food, and the Environment: a Common Resource
- 2. Human Health: a Cross Cutting Issue in Water Resources Development
- 3. Limitations to Conventional Approaches in the Domestic Water Supply Sector
- 4. Domestic Use of Irrigation Water
- 5. Newly Emerging Water Quality Problems
- 6. Saline Groundwater
- 7. Impact of Irrigation Management on Availability of Water for Domestic Use.
- 8. Urban Water Supply and Agriculture
- 9. Conclusions

Health Impact Assessment

353

L. Fewtrell, *Centre for Research into Environment and Health, Aberystwyth University, Wales*

G. R. Krieger, *NewFields, Denver, Colorado, USA*

J. Utzinger, *Department of Public Health and Epidemiology, Swiss Tropical Institute, Basel, Switzerland*

- 1. Introduction
- 2. Definitions of Health and Health Impact Assessment
 - 2.1. Health
 - 2.2. Determinants of Health
 - 2.3. Health Impact Assessment
- 3. The Health Impact Assessment Process
 - 3.1. Levels of Health Impact Assessment
 - 3.2. Quantification of Health Impacts
- 4. Examples of Health Impact Assessment
 - 4.1. In-house Rainwater Harvesting in the United Kingdom
 - 4.1.1. Drowning
 - 4.1.2. Injury
 - 4.1.3. Infection
 - 4.1.4. Quantification
 - 4.1.5. Health Impact Statement
 - 4.2. Nam Theun 2 Hydroelectric Project in Lao PDR
 - 4.2.1. Identification of Health Issues
 - 4.2.2. Assessment Process
 - 4.2.3. Potential Impact Areas of Concern
 - 4.2.4. Selected Assessment Results
- 5. Discussion and Conclusions

Role of Water Reuse in Management of Urban Water Resources

380

John C. Radcliffe, *Honorary Research Fellow, CSIRO Australia, Glen Osmond, South Australia 5064*

- 1. Introduction
- 2. Uses for recycled water in the Urban Environment

3. Production of Recycled water
 - 3.1. The extent of the available resource
 - 3.2. The Scale of Production
 - 3.3. The Choice of Technologies
 - 3.4. Location of production and transport to site of use
 - 3.5. Energy, Greenhouse, and operating costs
 - 3.6. The disposal of production by-products
4. The Market
 - 4.1. Market demand for the product
 - 4.2. Matching supply and demand
 - 4.3. The pressure at which the recycled water is to be supplied
 - 4.4. Disposal of the recycled water after use
5. The pricing structure
6. An appropriate regulatory environment
7. User and community acceptance
8. Conclusion

Coming to Terms with Nature: Water Reuse New Paradigm towards Integrated Water Resources Management **398**

Blanca Elena Jimenez-Cisneros, *National Autonomous University of Mexico, Mexico City, Mexico*

1. Introduction
2. Towards an integral definition of water reuse
3. How to overcome people's fear of reused water
4. What we know about natural water reuse
 - 4.1. Human consumption
 - 4.2. Agricultural irrigation
5. Natural water reuse origin
 - 5.1. Unacknowledged water discharges
 - 5.1.1. Sewer leakages
 - 5.1.2. On-site sanitation systems
 - 5.1.3. Irrigation of amenity areas
 - 5.1.4. Storage or evaporation tanks and pipelines
 - 5.1.5. Channels or rivers with contaminated water
 - 5.1.6. Water supply network
 - 5.1.7. Other kinds of unacknowledged sources
 - 5.2. Traditionally acknowledged discharges
 - 5.2.1. Municipal
 - 5.2.2. Industrial
 - 5.2.3. Agricultural
 - 5.2.4. Storm run-off
6. Situation by type of water body
 - 6.1. Surface water
 - 6.2. Groundwater
7. Control
8. Conclusions

Helminth Ova Control in Wastewater and Sludge for Agricultural Reuse **429**

Blanca Elena Jimenez-Cisneros, *National Autonomous University of Mexico, Mexico City, Mexico*

1. Introduction
2. General Information
 - 2.1. Helminthiasis: A Common Disease
 - 2.2. Helminths' Life Cycle
 - 2.3. Classification
3. Helminth Ova in Wastewater and Sludge

- 3.1. Type and Content
- 3.2. Fecal Coliforms as Indicators
- 3.3. Helminth Ova Criteria
- 4. Helminth Ova Characteristics
- 5. Helminth Ova Removal from Wastewater
 - 5.1. Waste Stabilization Ponds
 - 5.2. Reservoirs
 - 5.3. Wetlands
 - 5.4. Coagulation-flocculation
 - 5.5. Rapid Filtration
 - 5.6. UASB
- 6. Helminth Ova Inactivation in Sludge
 - 6.1. Lime Post-stabilization
 - 6.2. Acid Treatment
 - 6.3. Anaerobic Digestion
 - 6.4. Thermal Dry of Sludge Anaerobic Digested
 - 6.5. Composting
- 7. Helminth Ova Inactivation in Faecal Sludge
- 8. Analytical Techniques
- 9. Conclusions
