

CONTENTS

WATER AND DEVELOPMENT

Water and Development - Volume 1

No. of Pages: 390

ISBN: 978-1-84826-173-0 (eBook)

ISBN: 978-1-84826-623-0 (Print Volume)

Water and Development - Volume 2

No. of Pages: 300

ISBN: 978-1-84826-197-6 (eBook)

ISBN: 978-1-84826-647-6 (Print Volume)

CONTENTS

VOLUME I

Water and Development: Some Select Aspects **1**

Catherine M. Marquette, *Christian Michelsen Institute, Norway*
Silje Pettersen, *Georgetown University, Washington, D.C., USA*

1. Introduction
2. Issues Raised by Contributions in Under This Theme
 - 2.1. Human-Water Interactions Linked to Food, Agriculture and Energy Demands
 - 2.2. Human-Water Interactions in Developing Countries
 - 2.3. Conflict Over Water, Human Health and Gender
3. Insights from Contributions and Additional Issues
 - 3.1. Addressing Water Supply Constraints and the Future Role of Dams
 - 3.2. Water Management and the Challenge of Putting a Value on Water
 - 3.3. The Challenge of Arid Environments and Innovative Ways of Increasing Supply
 - 3.4. Water Resources and Conflict
 - 3.5. Global Climate Change and Impacts on Water Resources

The Future of Big Dams **13**

Robert J. A. Goodland, *Environment Department, World Bank, Washington DC 20433, USA*

1. Introduction
2. Environmental Sustainability in Hydro Dams
3. Transparency and Participation
4. Environmental Least-Cost Ranking
5. Involuntary Resettlement
6. Irrigation Dams
7. Greenhouse Gas Emission Damage Costs
8. The Future of Dams
9. Conclusion

The Dublin Principles: Institutional and Legal Arrangements for Integrated Water Resource Management **34**

Miguel Solanes, *Global Water Partnership, Santiago, Chile*
Fernando Gonzalez-Villarreal, *Global Water Partnership, Santiago, Chile*

1. Overview and introduction
2. Fresh Water as Finite and Vulnerable Resource
 - 2.1. Water Policies
 - 2.2. Quality Controls and Environmental Concerns
 - 2.3. Protection and Management of Water Supplies
 - 2.4. Water Planning and River Basins
 - 2.5. Assessment of Water Projects and Programs
3. Water Development and Management
 - 3.1. Water Development and Management
 - 3.2. Conciliation of Interests and Consultations
 - 3.3. Concern for International Issues
 - 3.4. Stakeholders Participation
 - 3.5. Information
 - 3.6. The Lowest Appropriate Level
4. Water as an Economic Good
 - 4.1. Water Rights
 - 4.2. Effective and Beneficial Use

- 4.3. Conditionality on Water Uses
- 4.4. Water Markets
- 4.5. The American Experience
- 4.6. Charging for Water

Water, Agriculture and Food Interactions**53**Wulf Klohn, *Land and water Development Division, Food and agriculture Organization, Rome, Italy*

- 1. Introduction
- 2. The forces that shape agriculture
- 3. Characteristics of water use for food production
- 4. How much water does it take to produce food?
- 5. The outlook for water for agriculture
- 6. Adapting to water scarcity
- 7. Rural poverty, water and food security
- 8. The special role of groundwater
- 9. Food production and the aquatic environment

Water Management Issues in Drylands in the Twenty-First Century**77**Peter Beaumont, *University of Wales, Lampeter, Wales, UK*

- 1. Nature of Dryland Environments
- 2. Population Growth in the Twentieth Century
- 3. Water Usage
- 4. Water Resource Availability
 - 4.1. Groundwater
 - 4.2. Surface Water
- 5. Water Use in the Twenty-First Century
- 6. New Sources of Water
 - 6.1. Desalination
 - 6.2. Re-Use of Waste Waters
- 7. Water and Conflict
- 8. Transboundary Rivers
- 9. Conclusion

Best Management Practices to Reduce Water Pollution: The Case of Mariculture**96**Denise L. Stanley, *California State University-Fullerton, USA*

- 1. Introduction: Water Pollution and Agro-Industries
 - 1.1 Shrimp Farming Dilemmas
- 2. Single Best Management Practices for Improved Mariculture Water Quality
 - 2.1 Filters, Treatment Plants, and Co-Production
 - 2.2 Stocking, Feeding, and Treatment Ponds
 - 2.3 Reduced Water Exchange
- 3. The Costs & Benefits of Reduced Exchange
- 4. Costs and Benefits of Single Water Exchange Practices
 - 4.1 Trends in the Literature
 - 4.2 Ecuador Case Study
 - 4.2.1 Experiment Design
 - 4.2.2 Experiment Results and Financial Calculations
 - 4.2.3 Net Present Value Analysis across Exchange Options
- 5. Future Implications: An Integrated Approach to Best Management Practices
- 6. Conclusions and Questions around the Adoption of Best Management Practices

Food and Water Demand and Supply in 2025 115

Charlotte de Fraiture, *International Water Management Institute, Colombo, Sri Lanka*
 David Molden, *International Water Management Institute (IWMI), Colombo, Sri Lanka*
 Upali Amarasinghe, *International Water Management Institute, Colombo, Sri Lanka*

1. Introduction
2. The PODIUM Model
 - 2.1. Model Description
 - 2.2. The Base Case Scenario
3. What can be done to Change Future Water Use
 - 3.1. Main Driving Forces behind Changes in Agricultural Water Use
 - 3.2. Population
 - 3.3. Diets
 - 3.4. Irrigated Areas, Yields and Water Demands
 - 3.5. Scope for Water Savings by Improved Efficiency
 - 3.6. Rain-Fed versus Irrigated Agriculture
4. Concluding Remarks

Institutional Requirements for Effective Water Management 135

D. J. Merrey, *International Water Management Institute (IWMI), Colombo, Sri Lanka*
 Douglas Lynn Vermillion, *International Water Management Institute (IWMI), Colombo, Sri Lanka*
 Tushaar Shah, *International Water Management Institute (IWMI), Colombo, Sri Lanka*

1. Introduction
2. From Administrative to Service Delivery Organizations
3. Conversion of Irrigation Systems into Multi-use Water Service Systems
4. Transcending the Infrastructure Dependency/Deterioration Trap
5. Establishing Appropriate Legal and Regulatory Frameworks
6. Implementing Integrated Management of Water
7. Conclusion: Future Institutional Requirements

Protection of the Quality and Supply of Freshwater Resources 155

Susan Walker, *Department of Geography, University of Aberdeen, UK*

1. Background
2. Objectives of Agenda 21 in the Context of River Basins
3. Pressures on the Water Environment in Europe
4. State of the Water Environment in Europe
5. Responses to Pressures on the Water Environment
6. Conclusion

Environmental Impact of Food Production and Consumption 187

Palaniappa Krishnan, *Bioresources Engineering Department, University of Delaware, USA*

1. Introduction
2. Soil Bio- diversity in Agricultural Food Production
3. Water Use and Water Pollution
4. Energy
5. Climate Change
6. Food Safety and Biotechnology
7. Use of Chemicals
8. Desertification
9. Conclusion

Interrelationships between The Environment and Food Production**201**Solon Barraclough, *Formerly of the UN Research Institute for Social Development, Geneva, Switzerland*

1. Introduction
2. Urbanization, Population Growth, and Technological Changes
3. Interrelationships between the Environment, Human Societies, and Food Production
 - 3.1. Arable Land
 - 3.2. Fresh Water
 - 3.3. Forests
 - 3.4. Ocean Fisheries
 - 3.5. Loss of Biodiversity
 - 3.6. Climate Change
4. Conclusions

Water and Health**219**Willie O.K. Grabow, *University of Pretoria, South Africa*

1. Introduction
2. Water-Related Diseases
 - 2.1. Pathogenic micro-organisms
 - 2.1.1. Emerging and re-emerging infectious diseases
 - 2.1.2. Zoonoses
 - 2.1.3. Protozoan parasites
 - 2.1.4. Bacteria
 - 2.1.5. Helminths
 - 2.1.6. Potential waterborne zoonoses
 - 2.1.7. Outbreaks of water-related diseases
 - 2.2. Hazardous chemical compounds
 - 2.2.1. Acute health effects of chemical compounds in water
 - 2.2.2. Chronic health effects of chemical compounds in water
 - 2.2.3. Conclusions
3. Public Health Impact of Water-Related Diseases
 - 3.1. Burden of disease
 - 3.1.1. Schistosomiasis
 - 3.1.2. Trachoma
 - 3.1.3. Regional patterns
 - 3.2. Discussion
4. Control of Water-Related Diseases
 - 4.1. General principles
 - 4.2. Goals of water treatment and disinfection
 - 4.3. Disinfectants and disinfection byproducts
5. Water Treatment Processes
 - 5.1. General principles
 - 5.2. Unconventional sources of water supply
 - 5.2.1. Water reclamation
 - 5.2.2. Desalination of seawater
 - 5.3. Low cost prevention strategies
 - 5.3.1. Waterborne transmission
 - 5.3.2. Future trends
 - 5.4. Point-of-use water treatment for home and travel
 - 5.5. Bottled water supplies
6. Water Quality Control
 - 6.1. Diseases associated with treated drinking-water supplies
 - 6.2. New strategies for water quality control
 - 6.3. Constraints to improving water and sanitation services
7. Utilization of Water and Related Resources
 - 7.1. Groundwater

- 7.2. Aquaculture and mariculture
- 7.3. Multiple uses and human health
- 8. Future Priorities

Water-Quality Monitoring of Rivers**285**Richard P. Hooper, *U.S. Geological Survey, 10 Bearfoot Road, Northborough, MA 01532 USA*Leslie DeSimone, *U.S. Geological Survey, 10 Bearfoot Road, Northborough, MA 01532 USA*

- 1. Introduction
- 2. Design Considerations in Water-Quality Monitoring Networks
 - 2.1. Monitoring Objectives
 - 2.2. Monitoring Approaches
 - 2.2.1. Time Period for Measurement
 - 2.2.2. Methods of Site Selection
 - 2.2.3. Chemical vs. Biological Monitoring
 - 2.3. Interpretive Context
- 3. Case Studies from the United States
 - 3.1. Revised NASQAN
 - 3.2. Maryland and Delaware Statewide Biomonitoring Assessments
 - 3.3. Massachusetts Comprehensive Monitoring Design
- 4. The Future of Water-Quality Monitoring Networks

Environmental Monitoring**305**R.S. Kanwar, *Iowa State Water Resources Research Institute and Iowa State University, Ames, Iowa, USA*A. Bakhsh, *Iowa State Water Resources Research Institute and Iowa State University, Ames, Iowa, USA*

- 1. Introduction
- 2. Loss of Ecology due to Agricultural Development
- 3. Environmental Monitoring
- 4. Equipment for Environmental Monitoring
 - 4.1. Water Monitoring
 - 4.1.1. Selection of Sampling Sites
 - 4.1.2. Sampling Frequency
 - 4.1.3. Selection of Monitoring Variables
 - 4.1.4. Equipment Used for Water Monitoring
 - 4.2. Soil Monitoring
 - 4.2.1. Soil Erosion
 - 4.2.2. Soil Salinity
 - 4.2.3. Soil Quality
 - 4.2.4. Soil Sampling
 - 4.2.5. Plant Sampling
 - 4.2.6. NO₃-N, Phosphorus, and Silica Analyses
 - 4.2.7. Fecal Coliform Bacteria Sample Collection and Enumeration
 - 4.3. Air-Quality Monitoring
 - 4.3.1. Sampling Strategies for Air-Quality Measurements
 - 4.4. Ocean Monitoring
 - 4.4.1. Pollutants in Coastal Waters, their Impacts, and Control
 - 4.4.2. Organic Compounds and Bacteria
 - 4.4.3. Plastics

Index**325****About EOLSS****333**

VOLUME II

Water and Sustainable Development: A Southern Perspective 1

Anthony Turton, *African Water Issues Research Unit (AWIRU), University of Pretoria, South Africa*

1. Introduction
2. Defining Sustainability in Dynamic Political Economies
 - 2.1. Some Theory: the Environmental Karshenas Curve
 - 2.2. Perceptions of Water and Water Landscapes
 - 2.3. Water Poverty and Water Scarcity: Two Useful Concepts
 - 2.4. Adaptive Capacity and Water Resource Management
3. Challenges to Achieving Sustainable Development
 - 3.1. So What is Sustainable Development?
4. Conclusion

Valuation of Water: Options for Sustainable Development in Developing Countries 27

Mamta Borgoyary, *Natural Resource Management Unit, Winrock International India, New Delhi, India*

1. Introduction
2. Scarcity of Water Resources: An Increasing Concern
3. Rationale for Valuation of Water: The Need for Price Reforms
4. Methods of Valuation
 - 4.1. Valuation Techniques
5. Future Directions for Sustainable Water Use in Developing Countries
6. Conclusion

Water and Conflict 45

Leif Ohlsson, *Department of Peace and Development Research, University of Göteborg, Sweden*

1. Introduction
2. Water Scarcity
 - 2.1. Availability of Water Resources
 - 2.2. Water Use by Category and Sector
 - 2.3. Potential Sources of Increased Supply
 - 2.4. Water Needs and Demands
 - 2.5. The Need for and Consequences of Demand Management
 - 2.6. Projections of Water Scarcity
 - 2.7. Water Scarcity—the Emerging Consensus
3. Water Scarcity and the Risk for International Conflict
 - 3.1. Zero-Sum Game or Confidence-Building
 - 3.2. Conflict Resolution – Water for Peace
 - 3.3. International Water Conflicts – the Emerging Consensus
4. Water Scarcity and the Risk for Conflicts within Countries
 - 4.1. The Risk for Conflicts within Countries Induced by Water Scarcity
 - 4.2. Policy Tools for Adapting to Water Scarcity within Countries
 - 4.3. The Risk for Conflicts Induced by Attempts to Adapt to Water Scarcity
 - 4.4. The Risk for Conflicts within Countries—the Emerging Consensus

Water and Sustainability in Mexico City 62

Haydea Izazola, *Department of Methods and Systems Sciences and Arts for Design, Universidad Autónoma Metropolitana-Xochimilco, Mexico*

1. Introduction
2. Natural Environment

3. Population
4. Expansion of the City
5. Transformation of the Ecosystem
 - 5.1. The Pre-Hispanic Period
 - 5.2. Flooding and the Struggle against Water
6. Supply of Potable Water
 - 6.1. Groundwater
 - 6.1.1. Land Subsidence
 - 6.2. External Basins
7. Water Consumption
8. Leaks
9. Wastewater Treatment
10. Future Scenarios
11. Final Remarks
12. Conclusion

Irrigation, Domestic Water Supply and Human Health

85

Willem van der Hoek, *International Water Management Institute (IWMI, Colombo, Sri Lanka*
 Eline Boelee, *International Water Management Institute (IWMI), Colombo, Sri Lanka*
 Flemming Konradsen, *Department of International Health, University of Copenhagen, Denmark*

1. Global Water Scarcity
2. Water and Health
3. Improving Water Supply and Sanitation
4. Domestic Use of Irrigation Water
5. Situation AnalysisCritical Issues to be Addressed in the Twenty-First Century
 - 5.1. Falling Groundwater Levels
 - 5.2. Rising Groundwater Levels
 - 5.3. Groundwater Quality Problems
 - 5.4. Re-Use of Water
6. Two Cases of Multiple Use of Irrigation Water
 - 6.1. Re-Use of Water
 - 6.2. Morocco
7. Lessons Learned

Contributions of Women in the United States in the Field of Water Resources

101

Rita Schmidt Sudman, *Water Education Foundation, USA*

1. Introduction
2. Mothers Against Toxics
 - 2.1. Love Canal
 - 2.2. THMs
3. Women's Civic Groups
4. The Professional and Political Women
 - 4.1. US Women Leaders in the
 - 4.2. Women Politicians
5. The Future
6. Conclusion

Climate as Life-Support Systems: A Climatological Overview

112

Masatoshi Yoshino, *Tsukuba University, Tsukuba, Japan*
 Kazuko Urushibara-Yoshino, *Geographical Department, Hosei University, Tokyo, Japan*

1. Introduction
2. Physical Representation

- 2.1. Köppen's Classification
- 2.2. Water Budget Approach
- 2.3. Phenological Approach
- 2.4. Synoptic Climatological Study
- 2.5. Historical Viewpoint
- 3. Impacts of Climate on Systems
 - 3.1. Adaptation
 - 3.2. Management and Vulnerability
 - 3.3. Acclimatization and Acclimation
 - 3.4. Historical Change
- 4. Interactions between Climate and Human Activities
 - 4.1. Human Activities and Environmental Change
 - 4.2. Agriculture
 - 4.3. Fisheries
 - 4.4. Population
 - 4.5. Small-Scale Interactions between Climate and Human Activities

Types of Environmental Models

131

R. A. Letcher, *Centre for Resource and Environmental Studies, The Australian National University, Australia*

A. J. Jakeman, *Centre for Resource and Environmental Studies, The Australian National University, Australia*

- 1. Introduction
- 2. Common Features of Environmental Systems
 - 2.1. Complex Nonlinear Interactions
 - 2.2. Heterogeneity of System Features
 - 2.3. Incompatible Scales
 - 2.4. Inaccessible or Unobservable System Processes
- 3. Types of Environmental Systems
 - 3.1. Hydrological Systems
 - 3.1.1. Surface Water Systems
 - 3.1.2. Subsurface Water Systems
 - 3.1.3. Coastal Systems
 - 3.2. Ecological Systems
 - 3.2.1. Agricultural Systems
 - 3.2.2. Wildlife Systems
 - 3.3. Climatic Systems
 - 3.3.1. Oceans
 - 3.3.2. Atmosphere
 - 3.3.3. Land Surface
- 4. Uses and Objectives of Environmental Models
- 5. Types of Models
 - 5.1. Empirical (or Statistical) Models
 - 5.2. Conceptual (or Lumped Parameter) Models
 - 5.3. Process- (or Physics-) Based Models
- 6. Modeling Environmental Systems
 - 6.1. Hydrological Systems
 - 6.1.1. Surface Water Systems
 - 6.1.2. Subsurface Hydrological Systems
 - 6.1.3. Coastal Systems
 - 6.2. Ecological Systems
 - 6.2.1. Agricultural and Pastoral Systems
 - 6.2.2. Wildlife Systems
 - 6.3. Climatic Systems
 - 6.3.1. Global Scale Systems
 - 6.3.2. Regional Scale Systems

7. Future Directions in Environmental Modeling

Field Techniques: Inland Waters **155**

Walter Geller, *UFZ Centre for Environmental Research Leipzig–Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

Wolf von Tuempling, *UFZ Centre for Environmental Research Leipzig–Halle Ltd., Dept. for Inland Waters Research, Magdeburg, Germany*

1. Introduction
2. Objectives: Lakes, Rivers, and Groundwaters
3. Human Use, Anthropogenic Changes, and Threats to Inland Waters
4. Sampling, Data Assessment and Field Techniques
5. Monitoring the State and Change of Water Quality
 - 5.1. Groundwater Monitoring Systems
 - 5.2. Surface Water Monitoring Systems
6. Monitoring Surface Waters by Remote Sensing

The Role of Forests in the Hydrological Cycle **174**

John M. Roberts, *Chief Plant Physiologist, Centre for Ecology and Hydrology-Wallingford, Wallingford, UK*

1. Introduction
2. The Hydrological Cycle in Forests
3. Forests and Hydrological Processes
 - 3.1. Forests and Rainfall
 - 3.2. Cloud Water Deposition
 - 3.3. The Physical and Physiological Background to Forest Evaporation
 - 3.4. Evaporation of Rain Intercepted by Forest Canopies
 - 3.5. Measurement and Modeling of Rainfall Interception
 - 3.6. Transpiration Loss from Forests
 - 3.7. Measurement of Forest Transpiration
 - 3.7.1. Soil Water Depletion
 - 3.7.2. Micrometeorological Methods
 - 3.7.3. Sap Flow Techniques
 - 3.7.4. Leaf/Branch Gas Exchange
 - 3.8. Controls of Forest Transpiration
 - 3.8.1. Forests and Solar Radiation
 - 3.8.2. The Roughness of Forests
 - 3.8.3. Surface Conductance of Forests
 - 3.8.4. Air Humidity Deficit
 - 3.8.5. Soil Water Availability
 - 3.8.6. Forest Understories
4. Effects of Afforestation/Deforestation on Streamflow
 - 4.1. Effects on Streamflow Amounts
 - 4.1.1. Clear Felling
 - 4.1.2. Thinning of Forests
 - 4.2. Forests and the Timing of Streamflow
5. Influence of Forests on Water Quality
 - 5.1. Forests and Stream Sediment
 - 5.2. Forests and Dissolved Substances
 - 5.3. Stream Salinity
 - 5.4. Acidification
 - 5.5. Streamside Buffer Strips

Land Degradation and Desertification: History, Nature, Causes, Consequences, and

Solutions**210**Arthur Conacher, *School of Earth and Geographical Sciences, University of Western Australia, Australia*

1. Introduction
 - 1.1. Structure of the Chapter
2. A Brief Historical Review of Land Degradation
3. The Forms of Land Degradation
 - 3.1. Flora and Fauna
 - 3.2. Soil Degradation
 - 3.3. Water Degradation
4. Research into the Causes of Land Degradation
 - 4.1. Cultivating Steep Slopes
 - 4.2. Desertification in the West Sahel
 - 4.3. Other Complex Causes
 - 4.4. Sequential and Unanticipated Cause-effect Situations
 - 4.5. International Research Efforts
5. Consequences of Land Degradation
6. Integrated Solutions and the Delimitation of Planning Regions
 - 6.1. Delimiting Planning Regions
 - 6.2. Implementing Solutions
 - 6.2.1. What?
 - 6.2.2. Who?
 - 6.2.3. When?
 - 6.2.4. Where?
 - 6.2.5. How?
 - 6.2.6. Why?
7. Conclusions
