

CONTENTS

EFFICIENT USE AND CONSERVATION OF ENERGY

Efficient Use and Conservation of Energy - Volume 1

No. of Pages: 352

ISBN: 978-1-905839-31-5 (eBook)

ISBN: 978-1-84826-931-6 (Print Volume)

Efficient Use and Conservation of Energy - Volume 2

No. of Pages: 306

ISBN: 978-1-905839-32-2 (eBook)

ISBN: 978-1-84826-932-3 (Print Volume)

CONTENTS

VOLUME I

Efficient Use and Conservation of Energy **1**
Clark W. Gellings, *Vice President – Technology Initiatives, The Electric Power Research Institute (EPRI), USA*

1. Introduction
2. The Energy Efficiency Imperative
3. Historical Trends
4. Efficiency of Energy Conversion
 - 4.1. Thermodynamic Basics
 - 4.1.1. The Science of Thermodynamics
 - 4.1.2. Thermodynamic Systems
 - 4.1.3. First Law of Thermodynamics
 - 4.1.4. Entropy and Second Law of Thermodynamics
 - 4.1.5. Thermodynamic Laws and Energy Conversion
 - 4.2. Measures of Efficiency
 - 4.2.1. First Law Efficiency
 - 4.2.2. Second Law Efficiency
 - 4.3. Total Resource Efficiency Merits of Electrotechnologies
5. Energy Use Management
 - 5.1. Developing an On-Site Energy Management Program
 - 5.2. Demand-Side Management Programs
6. Energy Efficiency Measures
 - 6.1. Buildings
 - 6.1.1. Lighting
 - 6.1.2. Heating, Ventilating, and Air Conditioning (HVAC)
 - 6.1.3. Building Envelope
 - 6.2. Industrial Processes
 - 6.3. Transportation
 - 6.4. Agriculture
7. Who Benefits from Energy Efficiency?
 - 7.1. Consumer Perspective
 - 7.2. Program Participant and Non-Participant Perspectives
 - 7.3. Utility Perspective
 - 7.4. Societal Perspective
8. Toward a Sustainable Energy Future

Efficient Use and Conservation of Energy in the Industrial Sector **56**
Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California, USA*
Kelly E. Parmenter, *Global Energy Partners, Lafayette, California, USA*
Patricia Hurtado, *Global Energy Partners, Lafayette, California, USA*

1. Introduction
2. Energy Resources
 - 2.1. Primary Resources
 - 2.1.1. Fossil Fuels
 - 2.1.2. Nuclear Fuel
 - 2.1.3. Renewable Resources
 - 2.2. Secondary Resources
 - 2.2.1. Heat Recovery
 - 2.2.2. On-Site Generation
 - 2.2.3. Thermal Energy Storage
3. Industrial Energy Management Program

- 3.1. Energy Managers and Steering Committee
- 3.2. Historical Data
- 3.3. Energy Audit Methodology
- 3.4. Energy-Efficiency Opportunities
 - 3.4.1. Energy-Efficient Building Operation
 - 3.4.2. Energy-Efficient Process Operation
 - 3.4.3. On-Site Generation Efficiency
 - 3.4.4. Efficiency of Grounds
 - 3.4.5. Plant Efficiency
- 3.5. Implementation
- 3.6. Monitoring
- 4. Progress in Industrial Energy Efficiency
 - 4.1. Electricity Use
 - 4.2. Fossil-Fuel Use
 - 4.3. Specific Industrial Processes

Efficient Use of Electricity in Process Operation

91

Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California, USA*
 Kelly E. Parmenter, *Global Energy Partners, Lafayette, California, USA*
 Patricia Hurtado, *Global Energy Partners, Lafayette, California, USA*

- 1. Introduction
- 2. Motors and Drives
 - 2.1. Perspective
 - 2.2. Energy-Efficiency Opportunities
 - 2.2.1. Operation and Maintenance
 - 2.2.2. Equipment Retrofit and Replacement
 - 2.2.3. Fans, Blowers, Pumps
 - 2.3. Case Study-High-Efficiency Motor versus Standard Motor
- 3. Compressed Air Systems
 - 3.1. Perspective
 - 3.2. Energy-Efficiency Opportunities
 - 3.2.1. Operation and Maintenance
 - 3.2.2. Equipment Retrofit and Replacement
 - 3.3. Case Study-Summary of Air Compression Efficiency Measures at 4300 Industrial Plants
- 4. Process Heat
 - 4.1. Perspective
 - 4.2. Energy-Efficiency Opportunities
 - 4.2.1. Operation and Maintenance of Thermal Process Heat Systems
 - 4.2.2. Equipment Retrofit and Replacement
 - 4.2.3. Efficiency Electric Heating Technologies
 - 4.2.4. Efficiency Advantages of Electric Process-Heat Systems
 - 4.3. Case Study-Induction Technology for Billet Heating
- 5. Electrolysis
 - 5.1. Perspective
 - 5.2. Energy-Efficiency Opportunities
 - 5.3. Case Study-New Electrode for Hall-Heroult Electrolytic Cells
- 6. Electrical-Efficiency Trends
 - 6.1. Perspective
 - 6.2. Technologies
 - 6.3. Case Study-Electric Freeze Concentration

Efficient Use of Fossil Fuels in Process Operation

113

Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California, USA*
 Kelly E. Parmenter, *Global Energy Partners, Lafayette, California, USA*
 Patricia Hurtado, *Global Energy Partners, Lafayette, California, USA*

1. Introduction
2. Combustion
 - 2.1. Perspective
 - 2.2. Energy-Efficiency Opportunities
 - 2.2.1. Operation and Maintenance
 - 2.2.2. Equipment Retrofit and Replacement
 - 2.3. Case StudyReduce Excess Air to Improve Efficiency
3. Boilers
 - 3.1. Perspective
 - 3.2. Energy-Efficiency Opportunities
 - 3.2.1. Operation and Maintenance
 - 3.2.2. Equipment Retrofit and Replacement
 - 3.3. Case StudySoot Removal from Fire-Side Boiler Tubes
4. Steam Systems
 - 4.1. Perspective
 - 4.2. Energy-Efficiency Opportunities
 - 4.2.1. Operation and Maintenance
 - 4.2.2. Equipment Retrofit and Replacement
 - 4.3. Case StudyImproved Controls to Reduce Steam Consumption
5. Process Heat
 - 5.1. Perspective
 - 5.2. Energy-Efficiency Opportunities
 - 5.2.1. Operation and Maintenance
 - 5.2.2. Equipment Retrofit and Replacement
 - 5.3. Case Study – Replacement of a Conventional Kiln with an Energy-efficiency Kiln
6. Trends
 - 6.1. Combustion
 - 6.2. Boilers and Steam
 - 6.3. Process Heat

Energy Efficiency in Specific Industrial Segments

135

Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California, USA*

Kelly E. Parmenter, *Global Energy Partners, Lafayette, California, USA*

Patricia Hurtado, *Global Energy Partners, Lafayette, California, USA*

1. Introduction
2. Selected Industries Overview
 - 2.1. Perspective
 - 2.2. Energy-Efficiency Opportunities
 - 2.3. Trends
3. Aluminum Industry
 - 3.1. Perspective
 - 3.2. Energy-Efficiency Opportunities
 - 3.3. Trends
4. Steel Industry
 - 4.1. Perspective
 - 4.2. Energy-Efficiency Opportunities
 - 4.3. Trends

Total Plant Energy Efficiency

153

Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California, USA*

Kelly E. Parmenter, *Global Energy Partners, Lafayette, California, USA*

Patricia Hurtado, *Global Energy Partners, Lafayette, California, USA*

1. Total Plant Energy Balance
2. On-Site Generation

- 2.1. Overview
- 2.2. Cogeneration
 - 2.2.1. Perspective
 - 2.2.2. Technologies
 - 2.2.3. Applications
 - 2.2.4. Trends
- 2.3. Case Studies
 - 2.3.1. Case Study 1—Oil Facility to Sell Electricity to Open Market
 - 2.3.2. Case Study 2—Evaluation of an Advanced Turbine System for Cogeneration
- 3. Thermal-Energy Storage
 - 3.1. Overview
 - 3.2. Cogeneration with Thermal-Energy Storage
- 4. Heat Recovery
 - 4.1. Overview
 - 4.2. Recuperators

Efficient Use and Conservation of Energy in Buildings

174

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*

- 1. Introduction
- 2. Building Structure Elements
 - 2.1. Insulation
 - 2.2. Storm and Multipane Windows and Storm Doors
 - 2.3. Window Treatments
 - 2.4. Infiltration and Indoor Air Quality Control
 - 2.5. Passive Solar Design
 - 2.6. Duct and Pipe Insulation
 - 2.7. Daylighting
- 3. Heating, Ventilation, and Air Conditioning
 - 3.1. High Efficiency Air-Source Central Heat Pump
 - 3.2. Groundwater Source Heat Pump
 - 3.3. Ground-Coupled Heat Pump
 - 3.4. Multi-Zone Heat Pump
 - 3.5. Room Heat Pump
 - 3.6. Dual-Fuel Heating Systems
 - 3.7. Add-On Heat Pump
 - 3.8. Active Solar Space Heating
 - 3.9. Task Heating
 - 3.10. Zoned Resistance Heating
 - 3.11. High-EER Air Conditioner
 - 3.12. Slab Heating
 - 3.13. Ice Storage Air Conditioning
- 4. Energy Consuming Devices and Appliances
 - 4.1. Heat Pump Domestic Water Heating
 - 4.2. Recovery Water Heater
 - 4.3. Solar Domestic Water Heating
 - 4.4. Energy-Efficient Cooking Appliances
 - 4.5. Energy-Efficient Clothes Washers and Dishwashers
 - 4.6. Storage Water Heater Blankets
 - 4.7. Energy-Efficient Refrigerators and Freezers
 - 4.8. Efficient Lighting Fixtures and Lamps
- 5. Load Management Technologies
 - 5.1. Receiver Switches
 - 5.2. Domestic Water Heater Cycling Control
 - 5.3. Air Conditioner Cycling Control
 - 5.4. Timers
 - 5.5. Appliance Interlocks

- 5.6. Programmable Controllers
- 5.7. Temperature-Activated Switches
- 5.8. Load Management Thermostats
- 5.9. Swimming Pool Pump Control

Efficient Use of Lighting in Buildings

197

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*

- 1. Introduction
- 2. Illumination
 - 2.1. Visual Task and Performance
- 3. Energy Efficiency in Lighting
 - 3.1. Design Lighting for the Expected Visual Task or Function of Space
 - 3.2. Consider the Physical Characteristics of the Area
 - 3.3. Use More Efficient Light Sources
 - 3.4. Design with More Effective Luminaires
 - 3.4.1. Mountings
 - 3.4.2. Luminaire Types
 - 3.5. Outdoor Lighting
 - 3.5.1. High Intensity Discharge (HID) Sources
 - 3.5.2. Life Cycle Costing
 - 3.5.3. New Luminaire Design
 - 3.5.4. Energy Saving Techniques
 - 3.6. Controls
 - 3.6.1. Lighting Panelboard Controls
 - 3.6.2. Switching Control
 - 3.6.3. Dimmer Switch Control
 - 3.6.4. Photoelectric Switch
 - 3.6.5. Photocontrolled Dimmer
 - 3.6.6. Time Clock
 - 3.6.7. Electronic Sensing Devices
 - 3.7. Maintenance and Operation
 - 3.7.1. Group Relamping and Maintenance
 - 3.7.2. Lamps
 - 3.8. Life Cycle Costing
 - 3.9. Lighting System Planning and Design
 - 3.9.1. Five Steps in Planning a Lighting System
- 4. Retrofit Technologies
 - 4.1. Lamp/Ballast Technology Performance
 - 4.1.1. Lamp Performance Measures
 - 4.1.2. Energy Efficiency
 - 4.1.3. Lamp Life
 - 4.1.4. Lamp Lumen Depreciation (LLD)
 - 4.1.5. Color Rendering Index (CRI)
 - 4.1.6. Correlated Color Temperature (CCT)
 - 4.2. Lamp Types
 - 4.2.1. Tungsten Halogen Lamps
 - 4.2.2. Compact Fluorescent Lamps
 - 4.2.3. Full-Size Fluorescent Lamps
 - 4.2.4. High Intensity Discharge Lamps
 - 4.2.5. Retrofitting Opportunities
 - 4.3. Luminaire Retrofit Technologies
 - 4.4. Lenses
 - 4.5. Control Technologies
 - 4.5.1. Retrofitting Occupancy Sensors
 - 4.5.2. Dimming Controls
 - 4.5.3. Timers and Time Clocks

- 4.5.4. Photocells
- 4.5.5. Latching Switches

Efficient Use of Heating, Ventilating, and Air Conditioning Systems in Buildings

243

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*

1. Introduction
2. Chillers and Chilled-Water Systems
 - 2.1. Description of Equipment
 - 2.1.1. Chillers
 - 2.1.2. Chilled-Water Loop
 - 2.1.3. Condenser-Water Loop
 - 2.2. Energy-Efficiency Opportunities
 - 2.2.1. Operation, Maintenance, and Control of Chillers and Chilled-Water Systems
 - 2.2.2. Equipment Retrofit and Replacement
 - 2.2.3. Thermal Energy Storage Systems
3. Cooling Towers
 - 3.1. Description of Equipment
 - 3.2. Energy-Efficiency Opportunities
 - 3.2.1. Equipment Retrofit and Replacement
4. Air Conditioning Units
 - 4.1. Description of Equipment
 - 4.2. Energy-Efficiency Opportunities
 - 4.2.1. Operation, Maintenance, and Control of Air Conditioning Units
 - 4.2.2. Equipment Retrofit and Replacement
5. Heat Pumps
 - 5.1. Description of Equipment
 - 5.2. Energy-Efficiency Opportunities
 - 5.2.1. Compressors
 - 5.2.2. Outdoor Coil Systems
 - 5.2.3. Indoor Coil Systems
 - 5.2.4. Reversing Valves
 - 5.2.5. Expansion Devices
 - 5.2.6. Refrigerant Charge Control
 - 5.2.7. Cabinet
 - 5.2.8. Cabinet Size and Strength Constraints
 - 5.2.9. Manufacturing Constraints
6. Packaged Terminal Equipment
 - 6.1. Description of Equipment
 - 6.2. Energy-Efficiency Opportunities
7. Boilers and Furnaces
 - 7.1. Description of Equipment
 - 7.2. Energy-Efficiency Opportunities
 - 7.2.1. Operation and Maintenance
 - 7.2.2. Equipment Retrofit and Replacement

Building Envelope Efficiency Measures

268

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*Kelly E. Parmenter, *Global Energy Partners, LLC, USA*

1. Introduction
2. Exterior Walls
 - 2.1. Insulation
 - 2.2. Minimize Thermal Bridging
 - 2.3. Passive Solar Heating
 - 2.4. Passive Solar Cooling

- 2.5. Air Flow and Moisture Control
- 3. Windows
 - 3.1. Daylighting
 - 3.2. Reduce Heat Gain
 - 3.3. Optimize Heat Gain
 - 3.4. Low-Conductivity Casements
- 4. Rooftops and Ceilings
 - 4.1. Insulation
 - 4.2. Cool Roofs and Coatings
 - 4.3. Solar Collectors
- 5. Foundations, Floors, and Basements
- 6. Infiltration and Ventilation

Index **285**

About EOLSS **291**

VOLUME II

Efficient Use and Conservation of Energy in the Transportation Sector	1
Clark W. Gellings, <i>Electric Power Research Institute (EPRI), USA</i>	
Kelly E. Parmenter, <i>Global Energy Partners, LLC, USA</i>	

- 1. Introduction
- 2. Energy Usage
- 3. Fuel Efficiency and Energy Intensity Trends
- 4. Use of Alternative Fuels
- 5. Electric Drive Vehicles
- 6. Energy Efficiency Opportunities

Energy Efficiency in Freight Transportation	19
Clark W. Gellings, <i>Electric Power Research Institute (EPRI), USA</i>	
Kelly E. Parmenter, <i>Global Energy Partners, LLC, USA</i>	

- 1. Introduction
- 2. Freight Truck
- 3. Pipeline
- 4. Rail Freight
- 5. Waterborne Freight
- 6. Air Freight
- 7. Energy-Efficiency Opportunities for Freight Transport
 - 7.1. Reduce Demand
 - 7.2. Increase Load Factor
 - 7.3. Shift to More Efficient Modes
 - 7.4. Improve Vehicle Efficiency
 - 7.5. Operate with Highest Efficiency
 - 7.6. Invoke Progress through Intervention and Technological Innovation

Energy Efficiency in Mass Transit Systems	36
Clark W. Gellings, <i>Electric Power Research Institute (EPRI), USA</i>	
Kelly E. Parmenter, <i>Global Energy Partners, LLC, USA</i>	

- 1. Introduction

2. Air
3. Bus
4. Transit Rail
5. Intercity Rail
6. Energy Efficiency Opportunities
 - 6.1. Reduce Demand
 - 6.2. Increase Load Factor
 - 6.3. Shift to More Efficient Mode
 - 6.4. Improve Vehicle Efficiency
 - 6.5. Operate with Highest Efficiency
 - 6.6. Invoke Progress through Intervention and Technological Innovation

Energy Efficiency in Passenger Cars and Light Trucks

56

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*
 Kelly E. Parmenter, *Global Energy Partners, LLC, USA*

1. Introduction
2. Personal Passenger Vehicle Travel
3. Energy Use Characteristics
4. Energy Efficiency Opportunities
 - 4.1. Reduce Demand
 - 4.2. Increase Load Factor
 - 4.3. Shift to More Efficient Modes
 - 4.4. Improve Vehicle Efficiency
 - 4.5. Operate with Highest Efficiency
 - 4.6. Invoke Progress through Intervention and Technological Innovation

Efficient Use and Conservation of Energy in the Agricultural Sector

72

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*
 Kelly E. Parmenter, *Global Energy Partners, LLC, USA*

1. Introduction
2. Energy Usage
3. Energy Efficiency Measures
4. Conservation Agriculture
5. Renewable Sources
 - 5.1. Solar Energy
 - 5.1.1. Photovoltaics
 - 5.1.2. Crop Drying
 - 5.1.3. Greenhouse Heating
 - 5.1.4. Lighting, Space Heating, and Water Heating
 - 5.2. Wind Energy
 - 5.3. Geothermal Energy
6. Biomass: Energy from Agriculture
 - 6.1. Conversion and Use of Biomass Energy
 - 6.2. Perennial Energy Crops

Energy Efficiency in Pumping and Irrigation Systems

95

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*

1. Introduction
2. Energy-Efficient Irrigation
3. Electric Pumping Plant Efficiency
 - 3.1. Inherent Inefficiencies
 - 3.2. Information Resources

4. Computerized Scheduling of Irrigation
5. Irrigation Load Management

Energy Efficiency in Agricultural Equipment

106

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*

1. Introduction
2. Crop Equipment
 - 2.1. Efficient Use of Tractors and Implements
 - 2.2. Crop Drying Efficiency Measures
3. Livestock Equipment
 - 3.1. Evaporative Cooling Systems for Livestock
 - 3.2. Milk Heat Recovery on Dairy Farms
 - 3.2.1. Heat Recovery Equipment
 - 3.3. Groundwater–Ice Bank Milk Cooling
 - 3.4. Energy-Efficient Lighting for Livestock Production
4. Farm Motors and Drives
 - 4.1. Energy-Efficient Farm Motors
 - 4.2. Variable Frequency Drives for Agriculture Ventilation Fans
 - 4.3. Variable Speed Drives for Dairy Vacuum Pumps

Energy Efficiency in Fertilizer Production and Use

123

Clark W. Gellings, *Electric Power Research Institute (EPRI), USA*Kelly E. Parmenter, *Global Energy Partners, LLC, USA*

1. Introduction
2. Fertilization for Crop Productivity
3. Trends in Fertilizer Use
4. Energy Intensity of Fertilization
5. Energy-Efficient Fertilization Practices
 - 5.1. Measures to Increase the Efficiency of Ammonia Production
 - 5.2. Measures to Increase the Efficiency of Fertilizer Use

Using Demand-Side Management to Select Energy Efficient Technologies and Programs

137

Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California USA*

1. Introduction
2. Demand-Side Management
 - 2.1. What Is Real
 - 2.2. What is DSM
 - 2.3. How Did DSM Evolve
3. DSM Impacts
 - 3.1. Efficiency Investments
 - 3.2. Load Management Costs and Benefits
 - 3.3. DSM Potential
 - 3.4. DSM Evaluation
 - 3.5. Measuring Success
 - 3.6. The Role of Research and Development
4. The Benefits of DSM Evaluation
 - 4.1. The Energy Efficiency Program Selection Planning Process
 - 4.2. Demand-Side Management Practice
5. Market Transformation
 - 5.1. The Advantages of Market Transformation
 - 5.2. Fostering Innovation
 - 5.3. Public Benefit Funding

Efficient Use of Electricity Through Demand-Side Management 168Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California USA*

1. Introduction
2. The Use of Energy and Electricity
3. Technological Revolution
4. Energy Savings
5. Big-Ticket Items

Deciding Which Demand-Side Management Activities to Pursue 179Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California USA*

1. Introduction
2. Load-Shape Objectives
3. End Use
4. Technology Alternatives
 - 4.1. How To Select Alternatives
 - 4.2. Levels of Analysis
 - 4.3. Information Requirements
 - 4.4. Transferability
 - 4.5. Data Requirements
 - 4.6. Cost/Benefit Analysis
 - 4.7. Non-Monetary Benefits and Costs
 - 4.8. Expected Changes in Load Shape
 - 4.9. Program Interaction
 - 4.10. Dynamic Load Shapes
 - 4.11. Forecasting and Promoting Demand-Side Management Alternatives
 - 4.12. Estimating Future Market Demand and Customer Participation Rates
 - 4.13. Consumer and Market Research

Market Implementation Methods 197Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California USA*

1. Introduction
2. The Market Planning Framework
3. Factors Influencing Customer Acceptance and Response
 - 3.1. Customer Satisfaction
 - 3.2. Direct Customer Contact
 - 3.3. Trade Ally Cooperation
 - 3.4. Advertising and Promotion
 - 3.5. Alternative Pricing
 - 3.6. Direct Incentives
4. Program Planning
 - 4.1. Program Management
 - 4.2. Program Logistics
 - 4.3. The Implementation Process
5. Monitoring and Evaluation
 - 5.1. Monitoring Program Validity
 - 5.2. Data and Information Requirements
 - 5.3. Management Concerns

Evaluation and Selection of Demand-Side Management Programs in the Commercial Sector 222Clark W. Gellings, *Electric Power Research Institute, Palo Alto, California USA*

1. Introduction
 - 1.1. Changes in the Marketing Environment
2. Buildings and Energy
 - 2.1. Changes in Construction
3. Building Sector Strategies and Programs
 - 3.1. Building Sector Demand-Side Management Technology Options
 - 3.2. Building Envelope Options
 - 3.3. Efficient Equipment Options
 - 3.4. Building and Subsystem Control
4. Building Market Segmentation
 - 4.1. Why Segment the Commercial Market?
 - 4.2. Customer Needs, Benefits, and Buying Criteria
 - 4.3. Customer Type
 - 4.4. Customer Size
 - 4.5. Technology
 - 4.6. End Uses
 - 4.7. Fusion Utility Load Shape Modification Objectives with Customer End Uses, Technology Choices and Needs
 - 4.8. Illustrative Segmentation Case Study
