

CONTENTS

POINT SOURCES OF POLLUTION: LOCAL EFFECTS AND CONTROL

Point Sources of Pollution: Local Effects and Control - Volume 1

No. of Pages: 442

ISBN: 978-1-84826-167-9 (eBook)

ISBN: 978-1-84826-617-9 (Print Volume)

Point Sources of Pollution: Local Effects and Control - Volume 2

No. of Pages: 516

ISBN: 978-1-84826-168-6 (eBook)

ISBN: 978-1-84826-618-6 (Print Volume)

CONTENTS

VOLUME I

Point Sources of Pollution: Local Effects and Control	1
Chen Jining, <i>Department of Environmental Science and Engineering, Tsinghua University, Beijing, China</i>	
Qian Yi, <i>Department of Environmental Science and Engineering, Tsinghua University, Beijing, China</i>	

1. Introduction
2. Characteristics of Point Sources: Wastewater
3. Characteristics of Point Sources: Air Pollution
4. Characteristics of Point Sources: Waste Solids
5. Characteristics of Point Sources: Noise
6. Legislation for Controlling Point Sources of Pollution
7. Management Improvement for the Control of Point Sources of Pollution
8. Technologies for Controlling Point Sources of Pollution
 - 8.1. Industrial Ecology
 - 8.2. Pollution Control Technologies
9. Conclusions

Vehicular Emissions	27
HE Kebin, <i>Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China</i>	
Zhang Qiang, <i>Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China</i>	
Huo Hong, <i>Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China</i>	

1. Vehicle Population
2. Vehicle Emissions
 - 2.1. Pollutants
 - 2.2. Formation of vehicle emissions
 - 2.2.1. Pollutants from tailpipe
 - 2.2.2. Evaporative emissions
 - 2.3. Influence of fuel quality on emissions
 - 2.3.1. Influence of gasoline quality
 - 2.3.2. Influence of diesel quality
3. Environmental Problems Associated with Vehicle Emissions
4. Control Strategies
 - 4.1. Controlling Emissions from New Vehicles
 - 4.1.1. USA
 - 4.1.2. EUROPE
 - 4.1.3. JAPAN
 - 4.2. Controlling Emission from In-Use Vehicles
 - 4.3. Improving Fuel Quality
 - 4.3.1. Conventional Fuels
 - 4.3.2. Alternative Fuel
 - 4.3.3. Gasoline Cleanser

Types and Amounts of Vehicular Emissions	64
HE Kebin, <i>Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China</i>	
Zhang Qiang, <i>Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China</i>	

Huo Hong, *Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China*

1. Introduction
2. Pollutants From Vehicles
 - 2.1. Carbon Dioxide
 - 2.2. Carbon Monoxide
 - 2.3. Sulfur Dioxide
 - 2.4. Nitrogen Oxides
 - 2.5. Volatile Organic Compounds
 - 2.6. Particulate Matter
 - 2.7. Lead
 - 2.8. Ozone
3. Mechanisms of Pollutant Formation and Emission Factors
 - 3.1. Formation of Nitrogen Oxides
 - 3.1.1. Spark Ignition Engine
 - 3.1.2. Diesel Engine
 - 3.2. Formation of Carbon Monoxide
 - 3.3. Formation of Non-combusted Hydrocarbons
 - 3.3.1. Chemical Mechanisms of Non-combusted Hydrocarbon Formation
 - 3.3.1.1. Formation of Aldehydes
 - 3.3.1.2. Formation of Ketones
 - 3.3.1.3. Formation of Alcohols
 - 3.3.1.4. Formation of Organic Acids
 - 3.3.2. Spark Ignition Engine
 - 3.3.3. Diesel Engines
 - 3.4. Formation of Particulates
 - 3.4.1. Spark Ignition Engine
 - 3.4.2. Diesel Engine
 - 3.5. Formation of Polycyclic-aromatic Hydrocarbons (PAH)

Environmental Impact of Motor Vehicles

84

Lixin Fu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Xiaoyu Xu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Impacts of Secondary Pollutants
 - 2.1. Photochemical Smog
 - 2.2. Acid Rain
3. Impacts of Greenhouse Gases
4. Impacts on Building Materials and Structures
5. Impacts of Vehicle Runoff on Water Bodies
 - 5.1. Impacts on Dissolved Oxygen
 - 5.2. Impacts on Nutrients
 - 5.3. Metal Impacts
 - 5.4. De-icing Salt Impacts
6. Impacts on Ecosystems
 - 6.1. Impacts on Animals
 - 6.1.1. Impacts from Photochemical Smog
 - 6.1.2. Impacts from Nitrogen Oxides
 - 6.1.3. Impacts from Sulfur Oxides
 - 6.1.4. Impacts from Carbon Monoxide
 - 6.1.5. Impacts from Particulate Matter
 - 6.1.6. Impacts from Heavy Metals
 - 6.2. Impacts on Soil, Vegetation, and Earthworms

- 6.3. Impacts on Surrounding Ecosystems
7. Conclusion

Health Effects

99

HE Kebin, *Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China*

Huo Hong, *Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China*

Zhang Qiang, *Department of Environment Sciences and Engineering, Tsinghua University, Beijing, P.R.China*

1. Introduction
2. Carbon Monoxide
3. Nitrogen Oxides
4. Sulfur Dioxide
5. Volatile Organic Compounds
6. Particulate Emissions
7. Photochemical Smog
8. Conclusion

Regional Distribution of Vehicular Emissions

111

Lixin Fu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Yang Chen, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Global Distribution of Vehicle Emissions
 - 2.1. U.S.A.
 - 2.2. Japan
 - 2.3. United Kingdom
 - 2.4. Europe
 - 2.5. Hong Kong
3. Twenty Megacity Vehicle Emission Summaries
 - 3.1. Bangkok
 - 3.2. Beijing
 - 3.3. Bombay
 - 3.4. Buenos Aires
 - 3.5. Cairo
 - 3.6. Calcutta
 - 3.7. Delhi
 - 3.8. Jakarta
 - 3.9. Karachi
 - 3.10. London
 - 3.11. Los Angeles
 - 3.12. Manila
 - 3.13. Mexico City
 - 3.14. Moscow
 - 3.15. New York
 - 3.16. Rio de Janeiro
 - 3.17. Sao Paulo
 - 3.18. Seoul
 - 3.19. Shanghai
 - 3.20. Tokyo
4. Urban Distribution of Vehicular Emissions
 - 4.1. Fundamentals of Automotive Pollution Dispersion

- 4.2. The Street-canyon Model
- 4.3. Urban Air Pollution Episodes
5. Remarks

Control Strategies to Reduce Emissions

130

Lixin Fu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Jiaping Tang, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Emission Standards and Regulations
 - 2.1. United States
 - 2.2. Europe
 - 2.3. Japan
3. Vehicle Technology for Controlling Emissions
 - 3.1. Control Technology for Gasoline-Fueled Vehicles
 - 3.1.1. Air- Fuel Ratio
 - 3.1.2. Crankcase Emissions and Evaporative Emissions Control
 - 3.1.3. Fuel Dispensing/Distribution Emissions and Control
 - 3.1.4. Catalytic Converters
 - 3.1.5. Electronic Control Systems
 - 3.2. Control Technology for Diesel- Fueled Vehicles
 - 3.2.1. Engine Design
 - 3.2.2. Exhaust After-treatment
4. I/M Programs for In-Use Vehicles
5. Fuel Modifications
 - 5.1. Lead Reduction and Gasoline Reformulation
 - 5.2. Alternative Fuels
 - 5.2.1. Natural Gas
 - 5.2.2. Liquefied Petroleum Gas (LPG)
 - 5.3. Electric and Hybrid-Electric Vehicles
6. Economic Incentives and Traffic Strategy
7. Remarks

Industrial Pollution

147

Xianghua WEN, *Department of Environmental Science and Engineering, Tsinghua University, Beijing 100084, P. R. China*

1. Introduction
2. Industrial Pollution Facing Different Countries
 - 2.1. OECD Countries
 - 2.2. Eastern European countries
 - 2.3. Developing Countries
3. Industrial Air Pollution
 - 3.1. Air Pollution Emissions from Industrial Processes
 - 3.1.1. Gaseous Emissions
 - 3.1.2. Particulate Emissions
 - 3.2. Industrial Odor Control
 - 3.2.1. The Problem
 - 3.2.2. Source of Industrial Odor and Its Control Method
4. Wastewater Pollution
 - 4.1. Industrial Wastewater Sources and Properties
 - 4.2. In-plant Wastewater Control and Water Reuse
 - 4.3. Industrial Wastewater Treatment
5. Solid Waste

- 5.1. Hazardous waste
- 5.2. Techniques to Reduce Hazardous Waste Quantities
- 6. Toxic Chemicals
- 7. Noise Control
 - 7.1. Noise and its effects
 - 7.2. Source of Noise and Its Control
- 8. Environmental Standard and Voluntary Environmental Programs
- 9. Industrial Ecology
- 10. Future Perspectives

Air Pollution Caused by Industries **171**

Jiming Hao, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing 100084, P.R.China*

Guowen Li, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing 100084, P.R.China*

- 1. Introduction
- 2. Main air Pollutants and Industrial Emissions Inventory
 - 2.1. Major Air Pollutants
 - 2.2. Industrial Emissions Inventory
- 3. Combustion Sources and their Emission Characterization
 - 3.1. Coal Combustion
 - 3.2. Oil Combustion
 - 3.3. Gas Combustion
- 4. The Chemical Industry
 - 4.1. Sulfuric Acid
 - 4.2. Hydrochloric Acid
 - 4.3. Synthetic Rubber
 - 4.4. Fertilizer Manufacture
- 5. Metallurgical Industry
 - 5.1. Smelting of Non-Ferrous Ores
 - 5.2. Manufacture of Iron and Steel
- 6. Construction Material Industry
 - 6.1. Hot-mix Asphalt Mixing Facilities
 - 6.2. Portland Cement
- 7. Petroleum industry
- 8. Paper and pulp manufacture

Industrial Wastewater-Types, Amounts and Effects **191**

Hanchang Shi, *Department of Environmental Science and Engineering, Tsinghua University, Beijing, China*

- 1. Introduction
- 2. The types of industrial waste water
 - 2.1. Inorganic industrial wastewater
 - 2.2. Organic industrial wastewater
- 3. The amounts of industrial wastewater
- 4. The effects of industrial wastewater
 - 4.1. The effects of inorganic pollutants from industrial wastewater
 - 4.2. The effects of organic pollutants from industrial wastewater
- 5. Other factors related to the effect of industrial wastewater

Types, Amounts and Effects of Industrial Solid Wastes **204**

Jinhui Li, *Department of Environmental Science and Engineering, Tsinghua University, Beijing, China*

1. Introduction
2. Types of Industrial Solid Wastes
3. Amounts of Industrial Solid Wastes
 - 3.1. Solid waste generation in some key industries
 - 3.1.1. Industrial solid wastes from the mining industry
 - 3.1.2. Solid waste in the metallurgical industry
 - 3.1.3. Solid wastes in the chemical industry
 - 3.2. Solid waste generation in some countries
 - 3.2.1. Generation of industrial solid wastes in China
 - 3.2.2. Generation of industrial solid wastes in the USA
4. Effects of Industrial Solid wastes
 - 4.1. Routes of industrial solid wastes polluting the environment
 - 4.2. Effect of industrial solid wastes on human health
 - 4.3. Effect of industrial solid wastes on the natural environment
 - 4.3.1. Effect on the atmospheric environment
 - 4.3.2. Effect on aquatic environment
 - 4.3.3. Effect on the soil environment of industrial solid wastes
5. Remarks

Industrial Pollution Prevention Strategy-Cleaner Production

221

SHI Lei, *Department of Environment Science and Engineering, Tsinghua University, P.R. China*
 LI Ruirui, *Department of Environment Science and Engineering, Tsinghua University, P.R. China*
 WEN Xianghua, *Department of Environment Science and Engineering, Tsinghua University, P.R. China*

1. Introduction
2. Concept and basic principles of CP
 - 2.1. Definition
 - 2.2. The Guiding Principles
3. Review of Status
 - 3.1. History of Cleaner Production
 - 3.2. Global Activities
 - 3.3. Main Achievements
 - 3.4. Current Challenges
4. Ways of Implementing CP
 - 4.1. Management and business instruments
 - 4.2. Government Policies and Strategies
 - 4.3. Technology Innovation and Improvements
 - 4.4. Education and Training
5. Cleaner Production in the 21st Century

Environmental Standards Concerning Industrial Pollution Discharge

240

Xianghua WEN, *Department of Environmental Science and Engineering, Tsinghua University, Beijing 100084, P. R. China*

1. Introduction
2. Emission Standards for Air
 - 2.1. Ambient Air Quality Standards
 - 2.2. Structure of the Emission Standards
 - 2.3. New Source Performance Standards
 - 2.4. Hazardous Air Pollutants
 - 2.5. National Emission Standards for Air Pollutants
 - 2.6. MACT Determinations (how to determine the emission limitations for HAPs)
3. Wastewater Emission Standards
 - 3.1. Water Quality Standards
 - 3.2. Water Discharge Permits
 - 3.2.1. National Pollutant Discharge Elimination System (NPDES) Permits

- 3.2.2. Technology-Based Effluent Standards
- 3.2.3. Water-Quality-Based Effluent Standards
- 3.2.4. The Total Maximum Daily Loads
- 3.2.5. Toxic Pollutants
- 3.3. Industrial Discharges into Public Owned Treatment Works
- 4. Solid and Hazardous Waste Management
 - 4.1. State Solid Waste Management
 - 4.2. Federal Regulation of Hazardous Wastes
 - 4.3. Hazardous Waste Generator Categories and Permits for them
 - 4.4. Common Management Violations
- 5. Noise and Odors
- 6. ISO (International Standards Organization)
 - 6.1. ISO 14000
 - 6.2. ISO 14001
- 7. Enforcement
- 8. Development Trend of Emission Standards

Domestic Pollution

259

Chen Jining, Department of Environmental Science and Engineering, Tsinghua University, Beijing, China

- 1. Introduction
- 2. Characteristics of domestic wastewater
- 3. Characteristics of domestic solid wastes
- 4. Disposal control of domestic wastewater
- 5. Reuse of domestic wastewater
- 6. Management of domestic wastes
- 7. Conclusions

Amounts and Composition of Municipal Solid Wastes

275

Yuan Guangyu, Dept. of Environmental Science and Engineering, Tsinghua University, Beijing, China

- 1. Introduction
- 2. Sources of MSW
 - 2.1. Residential and Commercial
 - 2.2. Institutional
 - 2.3. Municipal services
- 3. Amounts of Municipal Wastes
- 4. Estimation and Calculation of Quantity of MSW
 - 4.1. Measuring unit
 - 4.2. Relation between Quantity of MSW and Economic Growth
 - 4.3. Collection Efficiency of MSW
 - 4.4. Factors that affect Waste Generation Rates
- 5. Methodology of Estimation of Waste Quantities
- 6. The Concept of Composition of Solid Wastes
 - 6.1. Typical Composition of MSW
 - 6.2. Materials separation in MSW
- 7. The Method of Wastes Composition Studies
- 8. Waste Composition Studies
- 9. Waste Composition of MSW in the World
 - 9.1. Africa
 - 9.2. America
 - 9.3. Asia
 - 9.4. Europe

Disposal of Solid Wastes**296**Yuan Guangyu, *Professor, Dept. of Environmental Science and Engineering, Tsinghua University, Beijing, China*

1. Conception of Waste Disposal
2. Criteria for Evaluating of Wastes Disposal Orientation
 - 2.1. Technical and Social Feasibility
 - 2.2. Balance among Cost and Perfectibility of Disposal Activity
 - 2.3. Consistency with Macroscopically Municipal Plan
3. Background Conditions that Affect Disposal Orientation
 - 3.1. Level of Economic Development and Technological Development
 - 3.2. Natural Conditions
 - 3.3. Characteristic of Wastes
 - 3.4. Political Considerations
4. Judgment for Maneuverability of Project
5. Waste Reduction
 - 5.1. Main Consideration for Municipal Waste Reduction
 - 5.2. Systems of Waste Reduction and Materials Recover
 - 5.3. International Trading of Recyclable Wastes
6. Waste Collection and Transfer
 - 6.1. Collection
 - 6.2. Transfer
 - 6.3. Technical Options of Collection and Transfer
7. Landfill
 - 7.1. Introduction
 - 7.2. The Basic Elements of Landfill Disposal
 - 7.3. Environmental Protection in and after Landfill Operation
8. Incineration
 - 8.1. Introduction
 - 8.2. Prerequisite of Using Incineration
 - 8.3. System Types
 - 8.4. Energy Production
 - 8.5. Environmental Management of Incineration System
9. Composting
 - 9.1. Introduction
 - 9.2. Critical Conditions of Composting
 - 9.3. Technical Essentials of the Composting Process
 - 9.4. Environmental Impacts of the Composting Process
 - 9.5. Compost Quality Control

Municipal Effluent Disposal Standards**324**Chen Jining, *Department of Environmental Science and Engineering, Tsinghua University, Beijing, P. R. China*Chu Junying, *Department of Environmental Science and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. The regulation of conventional pollutants
3. The standards for toxic and dangerous substances
4. Technology-Based Standards
5. Water Quality-Based Limits
6. Effects of Effluent Disposal Standards
7. Conclusion

Municipal Wastewater Reuse	339
<i>Chen Jining, Department of Environmental Science and Engineering, Tsinghua University, Beijing, P. R. China</i>	
<i>Chu Junying, Department of Environmental Science and Engineering, Tsinghua University, Beijing, P. R. China</i>	

1. Introduction
2. Agricultural irrigation
3. Industrial reuse
4. Groundwater recharge
5. Urban Reuse
6. Augmentation of potable supplies
7. Recreational and habitat restoration/enhancement
8. Treatment Technologies for Wastewater Reuse
9. Conclusions

About EOLSS	365
--------------------	------------

VOLUME II

Environmental Pollutants and their Control	1
<i>Gang Yu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing R. China</i>	
<i>Junfeng Niu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing R. China</i>	

1. Introduction
2. Effects of toxic chemicals
3. Waste management
4. Clean production
5. Environmental regulations
6. A sustainable energy strategy
7. Environmental education and the civil ecological movement
8. Sustainable Development

Industrial Chemicals	11
<i>Junfeng Niu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China</i>	
<i>Gang Yu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China</i>	

1. Introduction
2. Inorganic Chemicals
 - 2.1. Ozone
 - 2.2. Carbon Monoxide
 - 2.3. Halogens and Halogen Compounds
 - 2.4. Cyanides
 - 2.5. Asbestos
 - 2.6. Nitrogen Oxides
 - 2.7. Inorganic Silicon Compounds
 - 2.8. Inorganic Phosphorus Compounds
 - 2.9. Inorganic Sulfur Compounds

3. Organic Chemicals
 - 3.1. Aliphatic Hydrocarbons
 - 3.2. Aromatic Hydrocarbons
 - 3.3. Oxygen-Containing Compounds
 - 3.4. Nitrogen-Containing Compounds
 - 3.5. Organohalide Compounds
 - 3.6. Organosulfur Compounds
 - 3.7. Surfactants
4. Metals
 - 4.1. Lead
 - 4.2. Mercury
 - 4.3. Chromium
 - 4.4. Cadmium
 - 4.5. Aluminium
 - 4.6. Other toxic metals
5. Organometallic Compounds
 - 5.1. Organolead Compounds
 - 5.2. Organomercury Compounds
 - 5.3. Organotin Compounds
 - 5.4. Others
6. Metalloids
7. Radionuclides

Agricultural Chemicals

43

Junfeng Niu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Gang Yu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Insecticides
 - 2.1. Inorganic Insecticides
 - 2.2. Organic Insecticides
 - 2.2.1. Organochlorine Insecticides
 - 2.2.2. Organophosphorus Insecticides
 - 2.2.3. Carbamate Insecticides
 - 2.2.4. Pyrethrins and Pyrethroids
3. Fungicides
 - 3.1. Inorganic and Organometallic Fungicides
 - 3.2. Organic Fungicides
4. Herbicides
 - 4.1. Inorganic and Organometallic Herbicides
 - 4.2. Organic Herbicides
5. Other Pesticide Type
6. By-products

Sampling, Measurement and Assessment

61

Zulin Zhang, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Gang Yu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Sampling and samples pretreatment
 - 2.1. Samples pretreatment for metals (sample digestion for metals)
 - 2.2. Samples pretreatment for organics

3. Measurement and determination
 - 3.1. Metal determination
 - 3.2. Organic determination
 - 3.3. Air Analysis
4. Quality Assurance

Contaminant Fate and Transport Process

75

Xi Yang, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing , P. R. China

Gang Yu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing , P. R. China

1. Introduction
 - 1.1. Chemical Concentration
 - 1.2. Mass Balance Approach
 - 1.3. Physical Transport of Chemicals
2. Surface Waters
 - 2.1. Physical Transport in Surface Waters
 - 2.2. Air-Water Exchange
 - 2.3. Biotransformation and Biodegradation
 - 2.4. Photodegradation
 - 2.5. Hydrolysis
3. The Subsurface Environment
 - 3.1. Chemical Sorption by Organic Carbon
 - 3.2. Chemical Sorption by Ion Exchange
 - 3.3. Surface Complexation
 - 3.4. Biodegradation
4. The Atmosphere
 - 4.1. Physical Removal of Chemicals from the Atmosphere
 - 4.2. Atmospheric Chemical Reactions

Economics, Social, Legal and Health Implications

95

Junfeng Niu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China

Gang Yu, Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China

1. Introduction
2. Economic implications
 - 2.1. Economic losses
 - 2.2. Economic benefits
 - 2.3. The limits of economics
3. Social implications
 - 3.1. Loss of natural resources
 - 3.2. Environmental pollution
 - 3.3. Poverty reduction and environmental health
4. Legal implications
 - 4.1. Lack of environmental monitoring data
 - 4.2. Financial support
 - 4.3. Strict clarification of the division and sharing of responsibilities
 - 4.4. Proper infrastructure development
5. Human health implications
 - 5.1. Health of women and children
 - 5.2. Toxic exposure
 - 5.3. Health effects of soil contamination
 - 5.4. Health effects of air pollution

- 5.5. Health effects of water pollution
- 5.6. Chemicals in biota and diet

Control Strategy for Toxic Pollutants

115

Jun Huang, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Gang Yu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

- 1. Introduction
- 2. Pollution prevention for toxic pollutants
 - 2.1. Waste management hierarchy
 - 2.2. Pollution prevention (P2)
 - 2.3. Three levels of P2
 - 2.3.1. Macroscale P2
 - 2.3.2. Mesoscale P2
 - 2.3.3. Microscale P2
 - 2.4. Toxics use reduction (TUR)
- 3. End-of-pipe treatment of toxic pollutants
 - 3.1. Physical methods
 - 3.2. Chemical methods
 - 3.3. Thermal methods
 - 3.4. Biological methods
 - 3.5. Efficacy data of techniques
- 4. Remediation of soils and groundwater contaminated by toxic pollutants
 - 4.1. Physical methods involving removal of toxic pollutants
 - 4.1.1. Excavation of soils
 - 4.1.2. Pumping water
 - 4.1.3. Pumping-skimming
 - 4.1.4. Washing and entrainment of contaminant by a liquid
 - 4.1.5. Extraction of gaseous pollutants—in-situ venting
 - 4.2. Physical methods of trapping pollution
 - 4.3. Chemical methods
 - 4.3.1. Mobilization and extraction
 - 4.3.2. Chemical reactions
 - 4.3.3. Electrochemical techniques
 - 4.4. Thermal methods
 - 4.4.1. Incineration
 - 4.4.2. Thermal desorption
 - 4.4.3. Pyrolysis
 - 4.4.4. Vitrification
 - 4.5. Biological methods
- 5. Conclusions

Technologies for Air Pollution Control

134

Jiming Hao, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Ye Wu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Shuxiao Wang, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

- 1. Introduction
- 2. Setting up an emission limit
- 3. Identifying emission sources
- 4. Process modification

5. Defining the control problem
6. Selecting a control system

Air Pollution Dynamics and Modeling

157

Lixin Fu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

Yang Chen, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Source characteristics
3. Air Pollution Meteorology
 - 3.1. Atmospheric Stability and Mixing Layer
 - 3.2. Large-scale Transport
 - 3.3. Mesoscale Transport and Micrometeorology
 - 3.4. Vertical Transport
4. Atmospheric Removal Processes
 - 4.1. Wet Deposition
 - 4.2. Dry Deposition
5. Atmospheric Diffusion
 - 5.1. Atmospheric Diffusion Theories
 - 5.2. Gaussian Plume Equation
 - 5.3. Atmospheric Diffusion Equation
6. Air Pollution Modeling
 - 6.1. Dispersion Modeling
 - 6.2. Air Quality Models
7. Pollution Accidents and Meteorological Control
8. Remarks

Clean Coal Technologies

175

Bingjiang Liu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Precombustion Technologies
2. Combustion Processes
 - 2.1. LIFAC Sorbent Injection Desulfurization
 - 2.1.1. Process Description
 - 2.1.2. SO₂ Removal
 - 2.1.3. Environmental and Economic Performances
 - 2.2. Atmospheric Fluidized Bed Combustion (AFBC)
 - 2.3. Pressurized Fluidized Bed Combustion
 - 2.4. Combustion Modifications to reduce NO_x
3. Post-Combustion Treatment
 - 3.1. Flue Gas Desulfurization (FGD)
 - 3.1.1. SO₂ Removal
 - 3.1.2. Process Description
 - 3.1.3. Environmental and Economic Performance
 - 3.2. Selective Catalytic Reduction (SCR)
 - 3.2.1. Process Description
 - 3.2.2. Environmental and Economic Performances
 - 3.3. Combined NO_x/SO₂ Reduction
4. Coal Conversion
 - 4.1. Overviews of Coal Conversion
 - 4.2. Integrated Gasification Combined-Cycle (IGCC)
 - 4.3. Integrated Gasification Fuel Cell (IGFC)
5. Research and Development of CCT

Control Techniques for Particles**194**Jiming Hao, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*Shuxiao Wang, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Introduction
2. Cyclones
 - 2.1. Dimensions of Cyclones
 - 2.2. Collection Efficiency of Cyclones
 - 2.2.1. Laminar Model
 - 2.2.2. Back-mixing Model
 - 2.2.3. Cut Diameter Approach
 - 2.3. Pressure Drop of Cyclones
 - 2.4. Applications of Cyclones
3. Fabric Filter
 - 3.1. Categorizing Fabric Filters
 - 3.2. Theory of Fabric Filters
 - 3.2.1. Collection efficiency of fabric filter
 - 3.2.2. Gas-to-Cloth Ratio
 - 3.2.3. Pressure drop
 - 3.3. Fiber types
 - 3.4. Applications of Fabric Filters
4. Electrostatic Precipitators
 - 4.1. Types of ESPs
 - 4.1.1. Plate-wire precipitator
 - 4.1.2. Flat-plate precipitators
 - 4.1.3. Tubular Precipitators
 - 4.1.4. Two-Stage Precipitators
 - 4.1.5. Wet ESPs
 - 4.2. Theory of ESPs
 - 4.2.1. Particle charging
 - 4.2.2. Particle Collection
 - 4.3. Applications of ESPs
5. Wet Scrubbers
 - 5.1. Collecting Mechanisms
 - 5.2. Types of Wet Particulate Scrubbers
 - 5.2.1. Venturi scrubbers
 - 5.2.2. Mechanically-aided scrubbers
 - 5.2.3. Pump-aided scrubber
 - 5.2.4. Wetted filter scrubber
 - 5.2.5. Tray or sieve scrubber
 - 5.3. Theory of Wet Scrubbers
 - 5.3.1. Pressure drop in scrubbers
 - 5.3.2. Collection efficiency
 - 5.4. Applications of Wet Scrubbers
6. Researches and Development of Particulate Collectors
 - 6.1. Theoretical Studies
 - 6.2. Emerging Particulate Collecting Technologies
 - 6.2.1. Improvement of mechanical collectors
 - 6.2.2. New fabric filters
 - 6.2.3. Development of ESP technologies
 - 6.2.4. Emerging wet scrubbers
 - 6.2.5. Hybrid systems

Technologies of Gaseous Pollutant Emission Control

222

Yongqi Lu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*Jiming Hao, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*Xinhao Zhu, *Department of Environmental Sciences and Engineering, Tsinghua University, Beijing, P. R. China*

1. Absorption
 - 1.1. General Principle
 - 1.2. Gas Absorption Equipment
 - 1.2.1. Packed Towers
 - 1.2.2. Plate Towers
 - 1.3. Flue Gas Desulfurization by Absorption Cleaning
 - 1.3.1. Wet Lime/Limestone FGD
 - 1.3.2. Spray Drying Absorption
 - 1.4. Other Applications in Gas Cleaning
 - 1.4.1. Removal of NO_x by Absorption
 - 1.4.2. Absorption of HF/SiF₄
2. Adsorption
 - 2.1. Process of Adsorption
 - 2.2. Adsorbents
 - 2.3. Desorption
 - 2.4. Equipment and System
 - 2.4.1. Fixed-bed System
 - 2.4.2. Moving-bed System
 - 2.4.3. Fluidized-bed System
 - 2.5. VOC Cleaning by Adsorption
 - 2.6. Application for Cleaning of Other Pollutant Gases
3. Catalytic conversion
 - 3.1. Catalysis and Catalyst
 - 3.1.1. General Principle
 - 3.1.2. Catalyst
 - 3.2. Catalytic Reactors
 - 3.2.1. Equipment Type
 - 3.2.2. Design Criteria
 - 3.3. Applications in Gas Cleaning
 - 3.3.1. SO₂ Oxidation
 - 3.3.2. SCR of NO_x
 - 3.3.3. Catalytic Oxidation of VOCs
4. Other technologies
 - 4.1. Thermal Incineration
 - 4.2. Condensation
 - 4.3. Biological Treatment of VOCs
 - 4.4. Photo-catalytic Oxidation of VOCs

Technologies for Water Pollution Control

248

Wang Jianlong, *Tsinghua University, Beijing, 100084, Peoples Republic of China.*

1. Introduction
2. Physical, chemical and Biological Characteristics of Water
 - 2.1. The Hydrologic Cycle and the Characteristics of Water
 - 2.2. Measurement of Organic Pollutants
 - 2.3. Types of Pollutants
 - 2.4. Characteristics of Wastewater
3. Wastewater Treatment Processes
 - 3.1. Basic Concept

- 3.2. Stages of Treatment Processes
- 3.3. Objectives of Wastewater Treatment
4. Physical Treatment Processes
 - 4.1. Screening
 - 4.2. Clarification (Sedimentation)
 - 4.3. Flotation
5. Chemical Unit Processes
 - 5.1. Coagulation – Precipitation
 - 5.2. Gas Transfer
 - 5.3. Neutralization
 - 5.4. Chemical Oxidation
 - 5.5. The Characteristics of Chemical Treatment Processes
 - 5.6. Applications of Chemical Methods
6. Biological Treatment Processes
 - 6.1. Fundamentals of Biological Treatment
 - 6.2. Organisms used in Wastewater Treatment
 - 6.2.1. Bacteria
 - 6.2.2. Fungi
 - 6.2.3. Algae
 - 6.2.4. Protozoa and Higher Animals
 - 6.3. Types of Biological Treatment Processes
 - 6.4. Typical Wastewater Treatment Process
 - 6.5. Applications of Biological Treatment
7. Bioremediation
 - 7.1. Basic Concept
 - 7.2. Fundamentals of Bioremediation
 - 7.3. Characteristics of Bioremediation
 - 7.4. The advantages of bioremediation
8. Soil Vapor Extraction (SVE)
 - 8.1. Basic Concept
 - 8.2. Characteristics of SVE System
 - 8.3. Components of SVE System
 - 8.4. Advantages of SVE system
9. Perspective Trend

Technologies that Move Pollutants from One Environmental Component to Another: Physical Methods

278

Jiane Zuo, *Tsinghua University, Beijing, 100084, P. R. CHINA*

1. Introduction
2. Screening
3. Sedimentation
4. Grit removal
5. Flotation
6. Filtration
7. Other Physical Technologies Commonly Used in Water and Wastewater Treatment

Technologies that Transform Pollutants to Innocuous Components: Chemical and Physicochemical Methods

299

Huang Xia, *Tsinghua University, Beijing, P.R. China*

1. Introduction
2. Coagulation
 - 2.1. Colloidal Properties
 - 2.2. Destabilization of Colloids
 - 2.3. Water Coagulation Process

- 2.4. Coagulants
3. Chemical Precipitation
 - 3.1. Removal of Heavy Metals by Chemical Precipitation
 - 3.2. Phosphorus Removal by Chemical Precipitation
4. Chemical Oxidation
 - 4.1. Classification
 - 4.2. Ozone Oxidation
 - 4.3. Use of Catalysts during Ozonation
 - 4.4. Hydrogen Peroxide Oxidation
5. Disinfection
 - 5.1. Disinfection Methods
 - 5.2. Disinfection with Chlorine
6. Adsorption Process
 - 6.1. Adsorbents
 - 6.2. Adsorption Isotherms
 - 6.3. Application in Water and Wastewater Treatment
7. Ion Exchange
 - 7.1. Principle and Classification
 - 7.2. Application in Water and Wastewater Treatment
8. Membrane Separation
 - 8.1. Concept of Membrane Separation
 - 8.2. Electrodialysis
 - 8.3. Pressure-Driven Membrane Operations
9. Prospective Trends

Technologies that Transform Pollutants into Innocuous Components: Biological Methods 315
Wang Jianlong, *Department of Environmental Science and Engineering, Tsinghua University, Beijing, P.R. China*

1. Introduction
2. Activated sludge process
3. Other Activated Sludge Configurations
 - 3.1. Oxidation Ditch Process
 - 3.2. Tapered Aeration
 - 3.3. The A-B Process
 - 3.4. Incremental Feeding
 - 3.5. Deep Shaft Process
 - 3.6. Pure Oxygen Process
4. Tricking Filter Processes
5. Rotating Biological Contactor Processes
6. Oxidation Pond Processes
 - 6.1. Facultative Ponds
 - 6.2. Maturation Ponds
 - 6.3. Anaerobic Ponds
 - 6.4. High-rate Aerobic Ponds
7. Land Treatment Processes
 - 7.1. Slow-rate Treatment
 - 7.2. Rapid Infiltration
 - 7.3. Overland Flow
 - 7.4. Wetland Treatment Systems
8. On-site Treatment Systems
 - 8.1. Septic Tank
 - 8.2. Soil Adsorption System
9. Anaerobic Biological Treatment Processes
10. Biological Nutrient Removal
 - 10.1. Nitrification
 - 10.2. Denitrification

- 10.3. Phosphorous Removal
- 11. Advanced Biological Treatment Techniques
 - 11.1. Recombined DNA Technique
 - 11.2. Immobilized Microbial Cell Technique

Technologies that Transform Pollutants into Innocuous Components: Combined Biological/Chemical Methods

330

Wang Jianlong, *Department of Environmental Science and Engineering, Tsinghua University, Beijing, P.R China*

- 1. Introduction
- 2. Chemical Treatment Processes
 - 2.1. pH Adjustment
 - 2.2. Chemical Oxidation
 - 2.2.1. The Role of Oxidation
 - 2.2.2. Common Oxidants used in Water and Wastewater Treatment
 - 2.3. Chemical Reduction
 - 2.4. Electrochemical Processes
 - 2.5. Chemical Flocculation
 - 2.6. Demulsification
 - 2.7. Disinfection
 - 2.8. Adsorption Processes
 - 2.9. Advanced Oxidation Processes
- 3. Biological Treatment Processes
 - 3.1. Aerobic Suspended Growth Processes (Activated Sludge)
 - 3.2. Aerated Attached Growth Processes
 - 3.3. Aerated Lagoon Treatment Process
 - 3.4. Stabilization Ponds
 - 3.5. Combined Aerobic Treatment Processes
 - 3.6. Combined Aerobic/Anoxic or Anaerobic Treatment Processes
- 4. The Application Areas of Combined Chemical/Biological Processes
- 5. Perspective

Remediation Techniques for Soil and Groundwater

350

X. H. Zhang, *Department of Environmental Science & Engineering, Tsinghua University, Beijing, China*

- 1. Introduction
- 2. Containment
- 3. Pump-and-Treat
- 4. Soil Vapor Extraction
- 5. Solidification/Stabilization
- 6. Soil Washing
- 7. Bioremediation
- 8. Air Stripping
- 9. Precipitation
- 10. Vitrification
- 11. Thermal Desorption
- 12. Strategy for Technique Selections
- 13. Future Development

Chernobyl Nuclear Power Plant Accident- Case Study

365

Yuri A. Izrael, *Institute of Global Climate and Ecology, Russian Federal Service for Hydrometeorology and Environment Monitoring, Russian Academy of Sciences, Russia*

- 1. Chernobyl Nuclear Power Plant Accident (Versions of Possible Causes of the Accident)

2. Formation and Description of Close-in and Remote Zone of the Environment contamination after the Accident. Radionuclide Composition of the Contamination
3. Analysis of Radioactive Contamination Transport with Consideration of Real Meteorological Situation after the Accident
4. Calculation and Reconstruction of Doses after Chernobyl
5. Penetration of Radioactive Substances into another Medium. Contamination of Agricultural and Natural Vegetation
6. Medical (for Human Health) Consequences
7. Biological and Ecological (for Nature) Consequences
