## AGRICULTURAL LAND IMPROVEMENT: AMELIORATION AND RECLAMATION

### **Agricultural Land Improvement: Amelioration and Reclamation - Volume 1**

**No. of Pages:** 448

**ISBN:** 978-1-84826-098-6 (eBook)

**ISBN:** 978-1-84826-548-6 (Print Volume)

### **Agricultural Land Improvement: Amelioration and Reclamation - Volume 2**

**No. of Pages:** 476

**ISBN:** 978-1-84826-099-3 (eBook)

**ISBN:** 978-1-84826-549-3 (Print Volume)

## CONTENTS

### VOLUME I

#### **Agricultural Land Improvement: Amelioration and Reclamation** **1**

B. S. Maslov, *Russian Academy of Agriculture Sciences, Russia*

1. Introduction: Land Improvement - The Basis of Development
2. Amelioration: Premises and Practices
3. Hydro-Melioration
  - 3.1. Irrigation
  - 3.2. Drainage
  - 3.3. Watering of the Area
  - 3.4. Flood and Inundation Control: Polders
  - 3.5. Forest Hydro-Melioration
  - 3.6. Landslide Control
  - 3.7. Mudflow Control
  - 3.8. Snow Amelioration
4. Soil Salinization Control: Chemical Amelioration
  - 4.1. Amelioration of Saline Soils
  - 4.2. Chemical Amelioration
    - 4.2.1. Soil Liming
    - 4.2.2. Amelioration of Solonchaks: Gypsum Application
    - 4.2.3. Application of Acids
    - 4.2.4. Chemical Additives and Conditioners
5. Erosion Control: Agricultural Afforestation
  - 5.1. Erosion Control Measures
  - 5.2. Agricultural Afforestation
6. Clearance of Vegetation: Phyto-Melioration
  - 6.1. Clearance of Vegetation
  - 6.2. Phyto-Melioration
7. Amelioration of Sands: Abrasion Control
  - 7.1. Amelioration of Sand Massifs
  - 7.2. Abrasion Control
8. Thermal Reclamation
9. Agro-Technical Amelioration (Culturetechnics)
10. Remediation of Contaminated Lands
11. Land Rehabilitation
12. Other Amelioration Practices
13. Conclusion

#### **The Necessity for Development of Land Reclamation** **55**

V.V. Shabanov, *Moscow State University of Environmental Engineering, Moscow, Russia.*

1. Development cycles of methods of complex reclamation regulation.
  - 1.1. Kinds of land reclamation
2. Principles of mathematical models for optimizing environmental conditions of plants and edaphic biota.
  - 2.1. General representation of curves of environmental requirements of plants
  - 2.2. Theoretical principles of deriving the dependence between the requirements of plants and soil condition
3. Mathematical models of processes of creation of environmental conditions.
4. Quantitative methods of substantiation of natural necessity of complex regulation of factors affecting the life of plants
5. Necessity of different kinds of reclamation for different natural zones.
6. Conclusion

**Hindrances and Restrictions to Farming**

79

V.V. Shabanov, *Moscow State University of Environmental Engineering, Moscow, Russia*  
 A.I. Golovanov, *Moscow State University of Environmental Engineering, Moscow, Russia*

1. Quality of lands and productivity.
  - 1.1. Change of productivity depending on environmental factors
2. Factors influencing efficiency of land use.
  - 2.1. Sensitivity to erosion (and deflation)
  - 2.2. The level of natural drainage
  - 2.3. Sensitivity to flooding
  - 2.4. Clogging of agricultural holdings with stones, overgrowth with shrubs, abundance of mounds, and reforestation
  - 2.5. Salinization of soils and pollution of lands with products of anthropogenic activity
  - 2.6. Unfavorable thermal regime
3. Limitations of opportunity of application of agro-technical methods.

**History of Land Improvement**

95

I. V. Minaev, *Belarussian Research Institute of Land Reclamation and Meadow Management, Minsk, Belarus*  
 B. S. Maslov, *Russian Academy of Agricultural Sciences, Moscow, Russia*

1. Introduction
2. Land Amelioration in the Ancient World (Egypt, Mesopotamia, China, India, etc.)
3. Land Amelioration in Medieval Times
4. The Modern Period of Land Amelioration
5. Contribution of Land Amelioration to the Development of Agriculture and Food Supply
6. Scientific and Technical Progress in Land Amelioration
7. Land Amelioration and Economic Security
8. Land Amelioration in the Systems of Sustainable Development

**Global Needs for Land Reclamation**

117

V.V. Shabanov, *Professor of Moscow State University of Environmental Engineering, Moscow, Russia*

1. Introduction - why the necessity of land reclamation arises
2. Direction of land improvement and an agriculture in various native-climatic zones of the Earth.
3. Native-meliorative zoning.
4. Conclusion, Universal necessity of complex meliorative regulation

**Efficiency of Using Reclaimed Lands**

135

K.P. Arent, *Moscow State University of Environmental Engineering, Moscow, Russia,*

1. Significance of Land Reclamation
2. Evaluation of Possible Expansion of Arable Lands
3. Peculiarities and Principles of Efficiency Evaluation
4. History of the Question
5. Expenses for Construction of Reclamation Systems and Land Development
6. Running Costs: Income.
7. Methods of Economic Efficiency Evaluation
  - 7.1. Traditional Methods
  - 7.2. Discounting methods
  - 7.3. Uncertainty and Risk Calculation
8. Evaluation of Real Investments Efficiency

**Agricultural Reclamation: Past, Present and Future**

**154**

V.V. Shabanov, *Moscow State University of Environmental Engineering, Moscow, Russia*

1. Reclamation in the past. Retrospective reclamation development review
2. Trends in the Development of Agricultural Reclamation
3. Complex reclamation. Basic concepts
4. Adaptive landscape agriculture regulation systems of complex reclamation
5. Regulation system of complex reclamation
6. Features of automation of systems of complex reclamation regulation
7. Single factor automation systems and complex regulation automation
  - 7.1. Automatic control system for soil humidity
  - 7.2. Automatic control system for groundwater levels
  - 7.3. Automatic control system for temperature
  - 7.4. Automatic control system for mineral nutrition
  - 7.5. Complex regulation automation
8. Development of reclamation in conditions of climate change
9. Conclusion

**Irrigation**

**177**

P.I. Kovalenko, *Institute of Hydraulic Engineering and Land Reclamation of the Ukrainian Academy of Agrarian Science, Kiev, Ukraine.*

Yu.A. Mikhaylov, *Institute of Hydraulic Engineering and Land Reclamation of the Ukrainian Academy of Agrarian Science, Kiev, Ukraine.*

O.I. Zhovtonog, *Institute of Hydraulic Engineering and Land Reclamation of the Ukrainian Academy of Agrarian Science, Kiev, Ukraine.*

1. A demand for irrigation
2. Regime of irrigation
3. Water resources and water quality
4. Reservoirs for irrigation purposes
5. Means of irrigation and watering facilities
6. Irrigation system and network
7. Rice systems
8. Spillway network
9. Irrigation management and automation of irrigation systems
  - 9.1. Watering control
  - 9.2. Water distribution control
  - 9.3. Irrigation system automation
10. Irrigation productivity
  - 10.1. Irrigation economy
  - 10.2. Irrigation ecology

**Distribution of Irrigated Lands and Water Consumption**

**213**

Iourii Nikolskii-Gavrilov, *Post Graduate College in Agricultural Science, Mexico*

Enrique Palacios-Vélez, *Post Graduate College in Agricultural Science, Mexico*

1. Irrigation Development from Ancient to Modern Times
2. Distribution of Irrigated Lands and Human Development
3. Provision of Agricultural Crops with Moisture
4. Moisture Shortage and Harvest
5. Calculating the Need for Water
6. Season and Single-Event Watering Norms
7. Irrigation Regimes
8. The Hydromodule and its Completion
9. Regulation of Water Distribution
10. Protection of Water Quality

11. Power and Metal Consumption for Irrigation
12. Ecologically Benign Irrigation Systems
13. Effective Utilization of Irrigated Lands
14. Irrigation during Stable Development

**Water Resources Quality and Supply**

239

Felipe Arreguín-Cortés, *Mexican Institute of Water Technology, Mexico*  
Alejandra Martín-Dominguez, *Mexican Institute of Water Technology, Mexico*

1. Surface (Rivers, Lakes, Reservoirs) and Subsurface Water for Irrigation
2. Regulation and Territorial Redistribution of River Flow
3. Resources of Groundwater
4. Desalination of Water—Sewage
5. Requirements of Irrigation Water—Chemical and Heat Regimes
6. The Purification and Reutilization of Water used for Irrigation
7. Water Abstraction Hydrodevices with Dams and Without Them: Sedimentation Tanks
8. Factors in the Design of Valves, Gates and Artificial Channels
9. Regulations Governing Constructions
10. Influence of Water Abstraction and Water Passing Constructions on Environment
11. Technology for Irrigation

**Irrigation Systems: Machinery and Technology**

255

Huber K.V, A.N. Kostyakov *All-Union Research Institute of Hydraulic Engineering and Land Reclamation, Russian Academy of Agricultural Sciences, Russia*

1. Introduction
2. Irrigation Systems
3. Irrigation Systems for Different Methods of Irrigation
  - 3.1. Surface Irrigation Systems
  - 3.2. Sprinkler Irrigation Systems
  - 3.3. Subsurface Irrigation Systems
  - 3.4. Drip Irrigation Systems
  - 3.5. Mist Irrigation Systems
4. Irrigation Network Design
  - 4.1. Open Networks
  - 4.2. The Buried Network
  - 4.3. Combined Network
  - 4.4. Water Collector–Escape Network
5. Irrigation System Computation.
  - 5.1. The Design of Water Discharges in Open Irrigation Networks
  - 5.2. Buried Network Computation
6. Rice Irrigation Systems
7. Irrigation Systems that Use Communal Wastewater and Livestock Sewage
  - 7.1. Disposal Fields (DF)
  - 7.2. Irrigation with Livestock Wastes
8. Computerization of Irrigation Systems
9. Operation of Irrigation Systems

**Drainage of Irrigated Land**

293

I.P. Aidarov, *Moscow State University of Environmental Engineering, Russia*  
L.F. Pestov, *Moscow State University of Environmental Engineering, Russia*

1. Inundation and salinity of irrigation land
2. Reasons of secondary irrigated land salinity
3. Soil salinity types

4. Salt - resistance of crops
5. Need in drainage and its types
6. Drainage of irrigated lands
7. Washing of salinized lands
8. Water loss reduction in irrigation system
9. Biological drainage

### **Development of Sandy and Stony Deserts**

**316**

I.P. Svintsov, *Head of Department of Water and Woodland Reclamation and Protective Forestation, Russian Agricultural Academy, Moscow, Russia*

1. Introduction
  - 1.1. Distribution of deserts
  - 1.2. Sandy deserts
  - 1.3. Stony deserts
  - 1.4. Formation of types of deserts
2. Natural resources
  - 2.1. Climatic resources
  - 2.2. Water resources
  - 2.3. Soils and soil resources
  - 2.4. Plant resources
3. Trees and shrubs of the arid zone
  - 3.1. Psammophytes
  - 3.2. Halophytes
  - 3.3. Succulents
  - 3.4. Variation in sand stabilizing plants
4. Complex use of deserts
5. Methods and technologies of melioration of degraded land
  - 5.1. Fastening of mobile sands
    - 5.1.1. Mechanical protection
    - 5.1.2. Afforestation of mobile sands by using thin films
    - 5.1.3. Forest reclamation of mobile sands with the use of chemical substances
    - 5.1.4. Melioration of degraded pastures
  - 5.2. Shelter belts (field protective afforestation)
  - 5.3. Blanket protective afforestation
  - 5.4. Reclamation with use of halophytes
6. Agricultural development of arid territories
  - 6.1. Plant growing
  - 6.2. Forage production
  - 6.3. Water-melon, melon and gourd growing
  - 6.4. Vine growing
7. Reclamation of stony deserts

### **Sustainability of Agricultural Production Under Irrigation**

**338**

Cesáreo Landeros-Sánchez, *Graduate College in Agricultural Science, Mexico*

José H. Rodolfo Mendoza-Hernández, *Graduate College in Agricultural Science, Mexico*

David Palma-López, *Graduate College in Agricultural Science, Mexico*

1. Introduction
2. The Current Situation of Agriculture under Irrigation
3. Environmental Changes Caused by Agriculture under Irrigation
  - 3.1. Soil Erosion Processes
4. Irrigation as a Contamination Source
  - 4.1. Nitrogen Compounds Contamination
  - 4.2. Pesticide Contamination
5. Perspectives of Agriculture under Irrigation

6. How Agriculture under Irrigation Can Become a Sustainable Activity

**The Economics of Irrigation Systems** **356**

D. M. Ryskulov, *Kostyakov All-Russia Research Institute of Hydraulic Engineering and Land Reclamation, Moscow, Russia*

1. Introduction. Background to the Economics of Irrigation Systems
2. Economic Features of Irrigation Systems
3. Operation Economics of Irrigation Systems
4. Tariff and Price Policies
5. Economics of Reconstructed and Constructed Irrigation Systems
  - 5.1. The basics of effectiveness evaluation
  - 5.2. Criteria
  - 5.3. Analysis of the stability of results
  - 5.4. Financial analysis
6. Business Plan
7. Special-Purpose Software
8. The Future Economics of Irrigation Systems: Internet-Based Decisions

**Index** **377**

**About EOLSS** **385**

## VOLUME II

**Drainage of Farmlands** **1**

Maslov B.S, *Russian Academy of Agricultural Sciences, Moscow, Russia*

1. Introduction
2. Needs for Drainage and Land Reclamation Resources
3. Types of Soil Water Supply
4. Crop Demands and Drainage Regimes
5. Drainage Methods
6. Drainage Systems and Their Constituents
  - 6.1. Drainage Systems
  - 6.2. Drainage Technology
  - 6.3. Open Channels
  - 6.4. Closed Drainage
  - 6.5. Agromeliorative Measures
  - 6.6. Enclosing Networks
  - 6.7. Conducting Drainage Networks
  - 6.8. Closed Collectors
  - 6.9. Structures Within Drainage Networks
  - 6.10. Water Intakes
7. Polders: Mechanical Drainage
8. Drainage of Peatlands, Forests, and Parks: Colmatage and Other Types of Drainage
  - 8.1. Bog Drainage for Peat Extraction
  - 8.2. Drainage of Forests and Parks
  - 8.3. Colmatage and Other Drainage Methods
9. Drainage–Irrigation Systems
10. Land Amelioration
11. Use of Drained Lands
12. Drainage and Environmental Protection Issues

**Techniques and Technologies of Land Drainage Systems**

**50**

Maslov B.S, *Russian Academy of Agricultural Sciences, Moscow, Russia*

Nikolskii-Gavrilov Yu.N, *Post Graduate College, Montecillo, Mexico State, Mexico*

1. Introduction
2. Drainage Techniques
  - 2.1. Channels and Subsurface Drainage
    - 2.1.1. Open Channels
    - 2.1.2. Subsurface Drainage
  - 2.2. Silting and Ochering of Drains
    - 2.2.1. Envelopes
    - 2.2.2. Drain Ochering
3. Drainage Calculations
  - 3.1. Hydrological Calculations
  - 3.2. Filtration Calculations
  - 3.3. Hydraulic Calculations
4. Drainage Systems
  - 4.1. Conducting System and Collectors
    - 4.1.1. Water-Conducting Channels
    - 4.1.2. Subsurface Collectors
  - 4.2. Interceptor Channels and Drains
  - 4.3. Regulative Floodgating
5. Drainage Construction Technologies
  - 5.1. Channel Construction
  - 5.2. Construction of Subsurface Drains
  - 5.3. Surface Soil Planing
  - 5.4. Surface Profiling (Landforming Tillage) and Subsoiling
6. Environmental Protection Issues

**Floods and High Waters, Using Polders for Protecting Agricultural Lands from the Floods**

**82**

A.P. Rusetski, *Belorussian Science-Research Institute of Melioration and Meadow Development, Minsk, and Polesskii Department of Flood Plain Meadow Development, Pinsk, Belarus*

1. Introduction
2. The reasons for floods and high waters.
3. Methods of protecting land from floods.
4. Polders and their classification.
  - 4.1. The structure and principal circuits of the polder systems
5. Non-flooding polders.
  - 5.1. Polder system dams
  - 5.2. Pumping stations
    - 5.2.1. Usage of pumping out and polder station pressure
    - 5.2.2. Choosing a pump
  - 5.3. Adjustment capacity and main channel
6. Flooded (summer) polders.
  - 6.1. Perimeter Dams
  - 6.2. Calculated usage and pumping station pressure
7. Flooded polders with adjusted length of flood (spring polders).
  - 7.1. Spring polders dams protection
  - 7.2. The usage of spring polder pumping out
  - 7.3. Constructive features of spring polders
8. Self-leaking polders.
9. Managing soil moisture in polders.
10. Perspectives of perfection and polder using.

**Debris Flows and Anti-Debris-Flow Measures**

**108**

Mirtskhoulava Ts.E., *Institute of Water Economy and Engineering Ecology, Georgian Academy of Sciences, Georgia*

Natishvili O.G., *Institute of Water Economy and Engineering Ecology, Georgian Academy of Sciences, Georgia*

Tevezadze V.I., *Institute of Water Economy and Engineering Ecology, Georgian Academy of Sciences, Georgia*

1. Etymology of the Term
2. Types of Debris Flow
3. The Occurrence of Debris Flows
4. Formation of Debris Flows and Factors Causing Them
5. Computation of Debris Flows
6. Destructive Force of Debris Flows
7. Prediction of Debris Flows
8. Methods Of Combating Debris Flows
  - 8.1. Organizational-Economic Measures
  - 8.2. Forest Reclamation Measures
  - 8.3. Agrotechnical Measures
  - 8.4. Small Hydraulic Structures
  - 8.5. Large Hydraulic Structures
9. The Future of Anti-Debris-Flow Protection

**Soil Improvement**

**126**

Starikov, Kh. N, *Nizhnii Novgorod State Agricultural Academy, Russia*

1. Introduction
2. Kinds and Technologies of Agrotechnical Work
3. Removal of Trees, Shrubs, Stumps, and Buried Timber
4. Removal of Stones
5. Removal of Tussocks, Thick Sod, and Moss Cover
6. Surface Planing
7. Remediation of Disturbed Lands
8. Soil Amendment
9. Initial Soil Tillage
10. Liming and Fertilization
11. Crop Growing
12. Radical Improvement of Meadows and Pastures
13. Prospects for Soil Improvement

**Chemical Amelioration of Soils**

**144**

E.I. Pankova, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

N.B. Khitrov, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

A.F. Novikova, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

I.E. Koroleva, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

V.F. Utkaeva, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

L.A. Vorob'eva, *Faculty of Soil Science, Moscow State University, Moscow, Russia*

O.A. Amel'yanchik, *Faculty of Soil Science, Moscow State University, Moscow, Russia*

M. Redly, *Research Institute of Soil Science and Agricultural Chemistry, the Hungarian Academy of Sciences, Budapest, Hungary*

1. Introduction. Definition of Concepts. Goals and Tasks of Chemical Amelioration
2. Soil Adsorption Complex, Soil Acidity, and Soil Alkalinity
  - 2.1. Cation-Exchange Complex, Ion Exchange, and Ion Selectivity
  - 2.2. Acid-Base Properties of Soils
    - 2.2.1. The Nature of Soil Acidity

- 2.2.2. Theoretical Backgrounds of Soil Liming
- 2.2.3. The Nature of Soil Alkalinity
- 2.2.4. Ion Exchange and Ion Selectivity in Alkali Soils
- 3. Acid Soils and Their Chemical Amelioration
  - 3.1. Acid soils: Definition and General Characterization
  - 3.2. The Effect of Acidity on Crop Yields and Soil Properties
  - 3.3. Chemical Amelioration of Acid Soils (Liming)
- 4. Salt-Affected Soils and Their Amelioration
  - 4.1. Salt-Affected Soils: Definition, Diagnostics, Grouping, and Main Principles of Amelioration
  - 4.2. Chemical Amelioration of Alkali Soils
  - 4.3. Phytamelioration of Saline and Alkali Soils
  - 4.4. Electromelioration of Saline and Alkali Soils
  - 4.5. Assimilation of Sea Coasts and Saline Lands of the Sea Bottom
- 5. Artificial Structuring Agents, Soil Conditioners, and Soil Additives
- 6. Secondary Salinization and Alkalization of Soils as a Result of Global Climate Change and Anthropogenic Processes
  - 6.1. Predicted Climate Change as a Factor of Salinization
  - 6.2. Secondary Soil Salinization/Alkalization induced by Irrigation
  - 6.3. Secondary Soil Salinization/Alkalization induced by Anthropogenic Processes other than Irrigation
  - 6.4. The Outlook for Soil Salinization
- 7. Conclusion: Ecological Consequences of Soil Reclamation and Environmental Conservation Issues

### **Kinds of Chemical Amelioration**

**185**

Redly, M, *Research Institute for Soil Science and Agricultural Chemistry of the Hungarian Academy of Sciences, Budapest, Hungary*

Utkaeva, V.F, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

- 1. Cation Exchange Complex of the Soil
  - 1.1. Exchangeable Cations
  - 1.2. Cation Exchange Capacity
- 2. Acidity and Alkalinity of Soils: Their Diagnostic Parameters
  - 2.1. Soil Acidity
  - 2.2. Soil Alkalinity
- 3. Acidity and Alkalinity as Properties Limiting Soil Fertility
  - 3.1. Water-Physical, Chemical, and Biological Properties of Acid Soils Unfavorable for Plant Growth and Agricultural Production
  - 3.2. Water-Physical, Chemical, and Biological Properties of Alkali Soils Unfavorable for Plant Growth and Crop Production
  - 3.3. Chemical Composition of Soil and the Efficiency of Organic and Mineral Fertilizers
  - 3.4. Tolerance of Plants to Soil Acidity and Alkalinity
- 4. Kinds of Chemical Amelioration: Chemical Amendments
  - 4.1. Chemical Amendments and the Reclamation of Acid Soils (Liming Materials)
    - 4.1.1. Calculation of Amendment Requirements (Rates)
    - 4.1.2. Methods and Conditions of Application
    - 4.1.3. Evaluation of Effectiveness
  - 4.2. Chemical Amendments and the Reclamation of Alkali (Sodic/Solonetzic and Soda-Saline) Soils
    - 4.2.1. Calculation of Amendment Requirements (Rates)
    - 4.2.2. Methods and Conditions of Application
    - 4.2.3. Evaluation of Effectiveness
  - 4.3. Artificial Soil Structure-Forming Substances and Other Soil Improving Chemical Compounds (Soil Conditioners)
    - 4.3.1. Polymers
    - 4.3.2. Organic Emulsions and Dispersions
    - 4.3.3. Inert Polymers
    - 4.3.4. Methods and Rates of Application
    - 4.3.5. Effectiveness

5. Soil Reclamation Models
6. Conclusions

## Reclamation of Acid Soils

207

Anatolij Osipov, *Agro-Physical Research Institute, ul. Gusarskaya, Pushkin, Russia*

Vladislav Minin, *Agro-Physical Research Institute, ul. Gusarskaya, Pushkin, Russia*

1. Introduction
2. Soil acidity and its indices
  - 2.1. Actual acidity
  - 2.2. Potential acidity
    - 2.2.1. Exchangeable acidity
    - 2.2.2. Hydrolitic acidity
  - 2.3. Cation (positive ion) exchange capacity and saturation with bases
3. Natural reasons for increasing soil acidification
  - 3.1. Leaching regime
  - 3.2. Soil-forming rocks and plants
  - 3.3. The distribution of acid soils
4. The reasons for anthropogenic acidification of soils. The phenomenon of environmental "Acidification"
  - 4.1. Acid precipitation
  - 4.2. Loss of calcium with the yields
  - 4.3. The activity of mineral and organic fertilizers
  - 4.4. Measures intended to increase soil productivity
5. Reasons for plants sensitivity to soil acidity
  - 5.1. The role of hydrogen ions
  - 5.2. The role of aluminum
  - 5.3. The role of manganese and iron
  - 5.4. The role of calcium and magnesium
  - 5.5. The optimal reaction of soil media
6. Liming as a major means of soil reaction optimization
  - 6.1. The background of liming process
  - 6.2. The calculation of lime dosage
  - 6.3. Quality of reclamation materials
    - 6.3.1. Equivalent of calcium carbonate.
    - 6.3.2. Particle size.
  - 6.4. Methods of liming
  - 6.5. GPS – Global position system for lime application
7. Sorts of lime fertilizers.
  - 7.1. Reclamation materials from solid limestone rocks
    - 7.1.1. Limestones, dolomites
    - 7.1.2. Marl
  - 7.2. Loosen carbonate rocks
    - 7.2.1. Calcareous tuffs
    - 7.2.2. Chalk
    - 7.2.3. Alm (lake lime)
  - 7.3. Calcium-containing industrial waste (byproducts)
    - 7.3.1. Belit slag
    - 7.3.2. Metallurgy slag
    - 7.3.3. Ash from combustible deposits
8. Methods of application of liming material
  - 8.1. Pneumatic spreaders
  - 8.2. Pole-type scatterers
  - 8.3. Centrifugal-typed scatterers
  - 8.4. The application of liquid reclamation materials
9. The efficiency of liming.
10. Perspectives of soil reaction control in agroecosystems.

**Amelioration of Alkali(Sodic/Solonetz) Soils**

241

Lyubimova I.N, V.V. *Dokuchaev Soil Science Institute, Russia*  
 Pankova, Ye.I, V.V. *Dokuchaev Soil Science Institute, Russia*  
 Pestov L.F, *Moscow State University of Environment Management, Russia*

1. Diagnosis of Alkali Soils: Concept, Indices and Criteria for Evaluation
2. Properties Limiting the Productivity of Alkali Soils
3. Amelioration of Alkali Soils
  - 3.1. Theoretical Aspects of Amelioration
  - 3.2. Amelioration Practices
    - 3.2.1. Chemical Amelioration
    - 3.2.2. Agrotechnical Amelioration
    - 3.2.3. Biological Amelioration (Phytomelioration)
    - 3.2.4. Complex Amelioration Practices
  - 3.3. Measures Taken After Amelioration
4. Control of the Moisture Regime of Alkali Soils Under Irrigation and Under Rainfed Conditions
5. Efficiency of Amelioration
6. Ecological Consequences of Amelioration
7. Examples of Objects for Amelioration
8. Conclusion

**Amelioration of Alkali(Soda-Saline) Soils**

267

Pankova Ye.I,V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*  
 Redly M, *Research Institute of Soil Science and Agricultural Chemistry, the Hungarian Academy of Sciences, Budapest, Hungary*  
 Aidarov I.P, *Moscow State University of Environmental Engineering, Moscow, Russia*  
 Pestov L.F, *Moscow State University of Environmental Engineering, Moscow, Russia*

1. Introduction: Diagnostics and Main Properties Limiting the Fertility of Soda-Saline Soils
  - 1.1. Definition and Diagnostic Criteria
  - 1.2. The Genesis of Soda and Geographic Distribution of Soda-Saline Soils
2. Amelioration of Soda-Saline Soils
  - 2.1. Theoretical Basis: The Goals of Amelioration of Soda-Saline Soils
  - 2.2. Soil Chemical Amendments: Methods of Application and Calculation of Requirements
  - 2.3. The Possibilities and Methods of Leaching
3. Complex Reclamation of Soda-Saline Soils in Irrigated and Dry-Farming Conditions
  - 3.1. The Technology of Complex Soil Reclamation under Irrigation
  - 3.2. The Technology of Complex Amelioration of Soda-Saline Soils without Irrigation
4. The Efficiency and Ecological Problems of the Development of Soda-Saline Soils
  - 4.1. The Efficiency of Amelioration and Ecological Problems
  - 4.2. Examples of Reclaimed Soda-Saline Soils
5. Conclusion

**Particular Forms of Land Amelioration Development of Coastal Marshlands and other Saline Soils**

289

S. Arunin, *Land Development Department, Thailand,*  
 F.R. Zaidelman, *Moscow State University, Moscow, Russia*  
 N.B. Khitrov, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*  
 E.I. Pankova, V.V. *Dokuchaev Soil Science Institute, Moscow, Russia*

1. Object of research. Geographical position, particular development and amelioration of soils in coastal areas
2. Polder meliorative systems. General position
3. Specific land use in coastal areas of different natural zones
4. Natural peculiarities and examples of land amelioration within coastal areas of South-East Asia.
  - 4.1. Peat swamp

- 4.2. Mangroves
- 4.3. Acid sulfate soils
- 4.4. Estuaries and lagoons
- 4.5. Seagrass beds
- 4.6. Coral reefs
5. Conclusion

### **Biological and Agrotechnical Amelioration**

**309**

I.G. Zykov, *All-Russia Scientific-Research Institute of Agro forest Reclamation, Volgograd, Russia*

1. Introduction
2. Climatic factors unfavorable for an agricultural production
3. Erosion and deflation of soils
4. The Influence of PFS on climatic factors, erosion and deflation
5. Kinds and destination of protective forest stands, their structure, form and placing

### **Goals and Demand**

**318**

I.P.Svintsov, *Department of Water and Forest Reclamation and Protective Forestation, Russian Agricultural Academy, Moscow, Russia*

1. Introduction
2. Greening of agriculture
3. Realization of biological and agro-technical land improvement
4. Use of the grounds without radical land improvement
5. Phytomelioration and forest reclamation
6. Combating erosion, use of eroded land, and recultivation
7. Soil protective systems and improvement of soils subject to erosion and deflation
8. Fertilizers

### **Phytomelioration**

**327**

O.N. Antsiferova, *All Russian Research Institute for Agriculture Use of Reclaimed Lands, Kalinin, Russia.*

1. Introduction
2. Phytomelioration: the concept and sphere of application
3. Phytoclimatic zones
4. Phytomelioration for protection of soil from water and wind erosion
  - 4.1. Soil-protective role of vegetation
  - 4.2. Woody vegetation
  - 4.3. Long-term grassland
  - 4.4. Phytomelioration actions
5. Phytomelioration for reinforcing of ravines and gullies
6. Phytomelioration for fastening and uses of sand
  - 6.1. Principles of phytomelioration works on sand
  - 6.2. Typology of phytomelioration conditions of mobile sand
7. Phytomelioration on irrigated and drained land
8. Phytomelioration for lowering of water table and reduction of infiltration
9. Use of afforestation for protection of agricultural crops from unfavorable climatic conditions
10. Phytomelioration with recultivation of the ground
11. Afforestation for aesthetic improvement
12. Halophytes - introduction and selection work

**Agrotechnical Melioration and Fertilizer 345**

V. F. Ladonin, D. N. Pryanishnikov *All-Russian Research Institute of Fertilizers and Agricultural Soil Science, Russian Federation, Russia*

1. Agroeconomic estimation of landscapes and soils.
2. Organisation of agricultural crops cultivation.
3. Optimisation of crop rotation systems in agricultural landscapes.
4. Optimum Ratio Between Landscape Elements (plowland, meadow, forest, reservoir)
5. Agroecological principles and methods of soil processing.
6. Management of organic substance content in soil, regulation of microbiological processes.
7. Maintenance of soil with nutritious elements; systems of macro- and microfertilizers.
8. Peculiarities of processing of soil polluted with heavy metals and radionuclides.
9. Agrotechnical protection of plants from harmful organisms (weed , harmful insects and diseases).
10. Forecast of agrotechnical melioration development and fertilizers applications in the Twenty-First century.

**Conservational Soil Treatment 358**

Volodin V.M. (deceased), *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

Cherkasov G.N, *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

Rozhkov A.G., *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

Pykhtin I.G, *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

1. Introduction
2. Anti-Erosion Organization of Territory
3. Rational Placing of Agricultural Crops
4. Soil-Protecting Water-Absorbing Processing of Soil
5. Making Meadows
6. Forest Meliorative Measures
7. Strip Agriculture
8. Retention of Surface Flow
9. Full Processing of Soil with Stubbles
10. Regulation of Small River Flow and Surface Flow
11. Artificial Structure-Formers
12. Artificial Irrigation of Soil

**Erosion and Deflation Control 381**

Volodin V.M. (deceased), *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

Cherkasov G.N, *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

Rozhkov A.G, *All-Russian Research Institute of Agronomy and Soil Erosion Control, Kursk, Russia*

1. Introduction
2. Soil Erosion
3. Soil Deflation
4. Field-Protecting Anti-Erosion Forest Belts
5. Melioration of Gully-Ruined Lands
6. Hydrotechnic Anti-Erosion Constructions
7. Bed and Bottom Constructions
