

CONTENTS

MANAGEMENT OF AGRICULTURAL, FORESTRY, AND FISHERIES ENTERPRISES

Management of Agricultural, Forestry, and Fisheries Enterprises - Volume 1

No. of Pages: 448

ISBN: 978-1-84826-199-0 (eBook)

ISBN: 978-1-84826-649-0 (Print Volume)

Management of Agricultural, Forestry, and Fisheries Enterprises - Volume 2

No. of Pages: 386

ISBN: 978-1-84826-200-3 (eBook)

ISBN: 978-1-84826-650-6 (Print Volume)

For more information of e-book and Print Volume(s) order, please [click here](#)

CONTENTS

VOLUME I

Management of Agricultural, Forestry, and Fisheries Enterprises 1

Robert J. Hudson, *University of Alberta, Edmonton, Canada*

1. Challenge of Food and Fiber Production
 - 1.1. Populations and Expectations
 - 1.2. Sustainability and Life Support Systems
 - 1.2.1. Soil Erosion and Desertification
 - 1.2.2. Carbon Cycles and Global Warming
 - 1.2.3. Nitrogen Cycles and Eutrophication
 - 1.2.4. Hydrologic Cycles
 - 1.2.5. Environmental Contaminants
 - 1.2.6. Biodiversity
 - 1.3. Social Issues
2. Natural Resource Sectors
 - 2.1. Fisheries
 - 2.2. Forestry
 - 2.3. Agriculture
 - 2.4. Integrated Biosystems
3. Natural Resource Enterprises
 - 3.1. Technical Adaptation
 - 3.1.1. Land Area
 - 3.1.2. Genetic Improvement
 - 3.1.3. Nutrient Management
 - 3.1.4. Water Management
 - 3.1.5. Pest Management
 - 3.2. Organizational Adaptation
 - 3.2.1. Community-Based Resource Management
 - 3.2.2. Small Farms
 - 3.2.3. Producer Associations, Co-Operatives, and Marketing Boards
 - 3.2.4. Collective and State Enterprises
 - 3.2.5. Corporate Concentration/Supply Chain Management
4. Future
 - 4.1. Sustainability
 - 4.1.1. Conserving Basic Resources
 - 4.1.2. Managing Inputs and Outputs
 - 4.1.3. Defining and Respecting Boundaries
 - 4.2. Opportunities and Solutions
 - 4.2.1. Innovation
 - 4.2.2. International Agreements
 - 4.2.3. Regulatory Systems
 - 4.2.4. Stewardship, Codes of Practice, and Best Management Practices
 - 4.2.5. Economic Instruments
 - 4.2.6. Ecosystem Approach to Environmental Management
 - 4.2.7. Holistic Integrated Approaches

Organization of Agricultural, Forestry, Fishery, and Rural Enterprises 23

Alex Hawley, *University of Northern British Columbia, Canada*

1. The Nature of Resources
2. Major Factors Determining Resource Use
 - 2.1. The Quest for Control
 - 2.2. Productivity of Living Systems

- 2.3. The Productivity Paradigm
- 2.4. The Doctrine of Systemology
3. Major Factors Affecting Natural Resource Use
 - 3.1. The Anthropic Revolution
 - 3.2. Technology
 - 3.3. Culture
4. Organization for Resource Use
5. Special Resources: Energy, Food, and Water
 - 5.1. Energy as a Resource
 - 5.2. Manipulating the Supply of Food and Water
 - 5.3. Control of Food Supply
6. Rates of Change and Changing Resources
7. Future Developments in Resource Use

Community-Based Natural Resource Management

36

Christo Fabricius, *Rhodes University, South Africa*

1. Introduction
2. Benefits of Community-Based Natural Resource Management
 - 2.1. Financial Benefits
 - 2.2. Non-Financial Benefits
 - 2.3. The Cost to Communities of Community-Based Natural Resource Management
3. Characteristics of Sustainable Community-Based Natural Resource Management
 - 3.1. International Policies and Agreements
 - 3.2. Donor Influences
 - 3.3. Combining Positive and Negative Incentives
 - 3.4. The Capacity of Role Players to Engage in Collaborative Management
 - 3.5. The Ability to Combine Local and Scientific Knowledge
 - 3.6. The Presence of Resourceful Individuals
 - 3.7. Local Regulations and Harvesting Restrictions
 - 3.8. Rewards for Good Habitat and Ecosystem Management
 - 3.9. The Existence of Appropriate Local Organizations
 - 3.10. Sustainable Benefit-Generating and Sharing Mechanisms
 - 3.11. Conflict Resolution Mechanisms
 - 3.12. Security of Land and Resource Tenure

Traditional and Small Farms

50

Donald Kass, *CATIE, Costa Rica*

1. Some Concepts and Definitions
2. Historical Background
3. The Present Situation
4. Strategies for Dealing with Small Farms
5. State of the Art Approaches

International Agricultural Cooperatives

65

M. E. Fulton, *Department of Agricultural Economics, University of Saskatchewan, Saskatoon, Canada*

K. K. Klein, *Department of Economics, University of Lethbridge, Canada*

Z. Lerman, *Department of Agricultural Economics and Management, The Hebrew University, Rehovot, Israel*

A. Harris, *Mountain Equipment Co-operative, Vancouver, Canada*

D. W. Attwood, *Department of Anthropology, McGill University, Montreal, Canada*

B.S. Baviskar, *Retired from Delhi School of Economics, University of Delhi, India*

1. Introduction

2. Cooperatives in Japan
3. Agricultural Cooperatives in Israel
4. Agricultural Cooperation in the Former Soviet Union
 - 4.1. Transition to a Market Economy
5. Agricultural Cooperatives in Canada
6. Agricultural Cooperatives in India
7. Agricultural Cooperatives in China
8. Concluding Remarks

Marketing Boards: An International Overview

87

Michele Veeman, *Department of Rural Economy, University of Alberta, Canada*

1. Introduction and Overview
2. The Functions of Marketing Relative to the Roles of Marketing Boards
3. Marketing Boards and Other Institutions of Market Intervention for Farm Products
4. Development, Focus, and Evolution of Marketing Boards
5. Types of Marketing Boards
6. Supply Management Marketing Boards
7. Some Examples of Marketing Boards and Government Boards for Agriculture
 - 7.1. A Domestic Marketing Board: Alberta Pork
 - 7.2. The Australian Wheat Board Limited
 - 7.3. The Canadian Wheat Board
 - 7.4. The New Zealand Dairy Board
 - 7.5. Two Examples of Government Marketing Agencies
 - 7.5.1. The Japanese Food Agency
 - 7.5.2. The Indonesian Badan Urusan Logistik
 - 7.6. Comments on the Examples
8. A Summary and Overview: Marketing Boards in the Future

Collective and State Enterprises in Agriculture

106

C. Fuchs, *University of Applied Sciences, Neubrandenburg, Germany*

1. Introduction
2. Definitions and Delimitation
 - 2.1. Enterprises in Agriculture
 - 2.2. Common and State Enterprises
3. Collective Enterprises in Agriculture: a Historical Overview
4. Examples of Common/Collective Enterprises
 - 4.1. Russia
 - 4.2. Eastern Germany
 - 4.3. France
 - 4.4. Israel
5. An Evaluation of Collective Enterprises in Agriculture
6. State Agricultural Enterprises
7. Conclusions

Corporate Concentration and Supply Chain Management in a Global Food Industry

118

Andrew Fearn, *Food Industry Management Group, Wye College, University of London, UK*

David Hughes, *Food Industry Management Group, Wye College, University of London, UK*

Rachel Duffy, *Food Industry Management Group, Wye College, University of London, UK*

1. Introduction
2. Globalisation of Grocery Retailing
 - 2.1. Supermarketing retail strategy
 - 2.2. Changing retailer behaviour

3. Food Manufacturing - The Clash of the titans
 - 3.1. Structural changes in international food and beverage manufacturing
 - 3.2. Increasing competitive environment in food manufacturing
 - 3.3. Combating the competitive threat from global retailers: FMCG initiatives
4. Supply Chain Partnerships for a Global Food Industry
 - 4.1. The principles of supply chain management
 - 4.2. Theoretical perspectives on supply chain partnerships: a brief review of the literature
 - 4.3. Efficient consumer response and the role of the 'Category Captain'
5. Conclusions

Plant Management Systems

147

G. W. Clayton, *Agriculture & Agri-Food Canada, Lacombe Research Centre, Alberta, Canada*

K. Neil Harker, *Agriculture & Agri-Food Canada, Lacombe Research Centre, Alberta, Canada*

1. Introduction
2. Nature's Building Blocks
 - 2.1. Energy
 - 2.2. Water
 - 2.3. Minerals
 - 2.3.1. Importance of Surface Residues
 - 2.4. Genetic Resources
 - 2.4.1. Genetic Engineering
3. Agroecosystems
 - 3.1. Manipulation of PMS
 - 3.1.1. Domesticated Plants and Pest Resistance
 - 3.1.2. Pests in Agroecosystems
 - 3.1.3. Yield Goals
 - 3.1.4. Previous Success and New Goals
4. Sustainable Agriculture-Environmental Health
 - 4.1. Soils
 - 4.1.1. Value of Soil Organic Matter
 - 4.1.2. Maintenance of Soil Organic Matter
 - 4.2. Greenhouse Gases
 - 4.3. Agri-Environmental Indicators
5. Integrated Approaches to PMS
 - 5.1. Crop Health Optimization
 - 5.1.1. Crop Health
 - 5.1.2. Nature's Own Controls
 - 5.1.3. Enhancing Nature's Controls
 - 5.1.4. Integrated Pest Management
6. The Costs of Technology
 - 6.1. Corporate Ownership/Influence
7. Meeting the Challenge of Environmentally Sustainable PMS

Plant Genetic Resources

178

Keith G. Briggs, *University of Alberta, Canada*

1. Importance and Utilization of Plant Genetic Resources
 - 1.1. Humankind's Dependence on Plants
 - 1.2. Domestication of Wild Plants, to Become the Elite Plants of Crop Agriculture
 - 1.3. Geographic Origins of World Crops, and Some Implications for Developed and Developing Countries
 - 1.4. Collecting Wild Plant Germplasm for Use in Modern, Sustainable Agriculture
 - 1.5. The Beneficiaries of Superior Plant Germplasm: An Evolving Scenario
2. International Approaches to World Plant Germplasm Conservation and Use
 - 2.1. Role of International Organizations in Plant Germplasm Resources

- 2.1.1. The Role of the Consultative Group on International Agricultural Research
- 2.1.2. The Role of the International Plant Genetic Resources Institute
- 2.2. The International Convention on Biodiversity, Agenda 21
- 2.3. The Global Plan of Action
- 3. Patterns of Plant Germplasm Use and Adoption
 - 3.1. The Start of Cultivated Agriculture
 - 3.2. Historical Phases in the Domestication of Plant Germplasm Resources
 - 3.3. Accessing and Creating New Sources of Genetic Variation
 - 3.4. Advantages of Genetic Variability in Crop Production Systems
 - 3.5. Using Plant Genetic Resources for Crop Protection from Diseases
 - 3.5.1. Why Genetic Resistance and Disease Virulence "Changes"
 - 3.5.2. Single Gene Resistance in Plants
 - 3.5.3. General (Horizontal) Resistance in Plants
 - 3.5.4. Some Resistance Breakdowns That Caused Famine and Loss
 - 3.5.5. Integrating Different Approaches for Controlling Plant Disease
 - 3.6. Pressures for Genetic Uniformity in Plant-Based Agri-Food Systems
- 4. Collecting, Preserving, and Cataloguing Plant Genetic Resources
 - 4.1. In Situ and Ex Situ Collections: General Aspects
 - 4.2. Categories of Collections
 - 4.2.1. Seed Banks
 - 4.2.2. Germplasm Banks of Vegetatively Propagated Plants
 - 4.2.3. Tissue Culture Banks
 - 4.2.4. DNA and Cloned Genes
 - 4.3. Database Systems Linked to Plant Genetic Resources
- 5. The Application of Plant Genetic Variation to Achieve Genetic Gains in Plants
 - 5.1. The Basis of Genetic Improvement: Variability, Heritability, and Selection Pressure
 - 5.2. Molecular Applications to the Conservation and Use of Plant Genetic Resources
- 6. Ownership and Access Issues in Plant Germplasm Conservation and Use
 - 6.1. Intellectual Property Rights, Patents, and Royalties on Germplasm
 - 6.2. Apportionment of Ownership for Germplasm of Complex Origin
 - 6.3. Farmers' Rights
 - 6.4. Reduced Ability of Producers to Save Their Own Seed Economically and Legally
 - 6.5. Genetically Modified Organisms and Transgenics: Their Potential, and Hindrances to Their Adoption

Water Management

216

Emmanuel Mapfumo, *University of Alberta, Canada*
 David S. Chanasyk, *University of Alberta, Canada*

- 1. Importance of Water and Its Global Distribution
 - 1.1. Availability of Global Water Resources
 - 1.2. Importance of Water to Plant Growth
- 2. Cropping Systems for Sustainable Water Use
- 3. Irrigation
 - 3.1. Definition and History
 - 3.2. Irrigation as a Management Practice
 - 3.3. Irrigation Agronomy
 - 3.4. Irrigation Engineering
 - 3.4.1. Surface Irrigation Methods
 - 3.4.2. Sprinkler Irrigation
 - 3.4.3. Trickle Irrigation
 - 3.4.4. Subsurface Irrigation
 - 3.5. Irrigation Water Management
 - 3.5.1. Quality
 - 3.5.2. Removal of Excess Salts from Irrigation Water
 - 3.5.3. Efficiency of Water Use
 - 3.5.4. Global Irrigation Efficiencies Trends

- 3.5.5. Community-Based Irrigation Management
- 4. Drainage
 - 4.1. Definition
 - 4.2. Sources of Excess Water
 - 4.3. Drainage Benefits
 - 4.4. Environmental Impacts of Drainage
 - 4.4.1. Acid Mine Drainage
 - 4.4.2. Subsidence of Organic Soils
 - 4.5. Surface Drainage Methods
 - 4.5.1. Bedding Systems
 - 4.5.2. Open Ditches
 - 4.6. Subsurface Drainage Methods
 - 4.6.1. Drainage Methods for Water Table Control
 - 4.6.2. Drainage Methods for Soils of Low Permeability
 - 4.7. Drainage Design Parameters
 - 4.8. Drainage Equations
- 5. Degradation of Water Resources

Plant Nutrient Management

241

V. L. Bailey, *Agronomy Unit, Alberta Agriculture Food, and Rural Development, Canada*

L. Kryzanowski, *Agronomy Unit, Alberta Agriculture Food, and Rural Development, Canada*

- 1. Introduction
- 2. Macronutrients for Crop Production
 - 2.1. Nitrogen
 - 2.2. Phosphorus
 - 2.3. Potassium
 - 2.4. Sulfur
- 3. Removal of Nutrients by Crops
 - 3.1. Cereals
 - 3.2. Forages
 - 3.3. Legumes
 - 3.4. Oilseeds
 - 3.5. Root Crops
- 4. Replacement of Soil Nutrients
 - 4.1. Nitrogen Fixation
 - 4.2. Mycorrhiza
 - 4.3. Organic Amendments
 - 4.4. Commercial Fertilizers
 - 4.5. Crop Rotation Management
- 5. Precision Farming
- 6. Future Concerns

Multiple Cropping Systems

254

Raymond N. Gallaher, *Institute of Food and Agricultural Science, University of Florida, USA*

- 1. Introduction
- 2. Cropping Systems Terminology
 - 2.1. Succession Multiple Cropping
 - 2.2. Intercropping
- 3. Conservation Tillage
- 4. History of Multiple Cropping
- 5. Multiple-Cropping Systems in Less-Developed Countries
- 6. Multiple Cropping in Developed Countries

Greenhouse and Hydroponics Systems

265

Richard G. Snyder, *Mississippi State University, USA*

1. Introduction
2. History
3. Definitions
4. Greenhouse Tomatoes
5. United States Greenhouse Tomato Demographics
6. Global Greenhouse Tomato Demographics
7. Market Saturation
8. Essential Equipment for Growers
9. Pollination
10. Variety Selection
11. Cluster Harvest
12. Greenhouse Cherry Tomatoes
13. Tips for New or Prospective Growers
14. Information for New Growers

Livestock Production Systems

275

E. A. Laca, *University of California, USA*M. W. Demment, *University of California, USA*

1. Introduction
2. Role of Livestock in Food Systems
 - 2.1. Types of Livestock
 - 2.2. Ruminants Versus Non-ruminants
3. Types of Livestock Systems
 - 3.1. Pastoralist or Grazing-based Systems
 - 3.1.1. Management Principles, Factors, and Problems
 - 3.1.2. Agricultural Development and Grazing Systems
 - 3.2. Mixed Systems
 - 3.2.1. Management Principles, Factors, and Problems
 - 3.3. Industrial Systems
 - 3.3.1. Management Principles, Factors, and Problems
 - 3.3.2. Manure
4. Livestock Products in Human Nutrition
5. Livestock Systems and the Environment
 - 5.1. Environmental Costs of Livestock Production
 - 5.2. Biodiversity and Pollution
 - 5.3. Global Warming
6. Current and Future Challenges in Livestock Systems
 - 6.1. How Will We Meet the Demand for Animal Products?
 - 6.2. How Will We Abate Negative Environmental Impacts of Livestock?
 - 6.3. What Technologies Will Be Socially Acceptable?
7. Conclusions

Genetic Resources for Livestock Production

308

Luis Iniguez, *Natural Resource Management Program, International Center for Agricultural Research in the Dry Areas (ICARDA), Aleppo, Syria*J. Stuart F. Barker, *School of Rural Science and Agriculture, University of New England, New South Wales, Australia*

1. Introduction
2. Animal Variability and Diversity
 - 2.1. Widely Distributed Species with a Range of Adaptations and Breeds for Specific Environments: The Case of Hair Sheep

- 2.2. Species with a Limited Distribution and Few Subpopulations or Breeds: The Andean Camelids
- 2.3. Directed Selection that Developed Highly Productive Breeds
- 2.4. Traits Selected Against in Harsh Environments: Sheep and Prolificacy
3. Threats to Animal Diversity
4. Steps Towards Better Management and Conservation of Animal Genetic Resources
 - 4.1. A Global Framework for Breed Characterization: FAO's Animal Genetic Resources Program for the Measurement of Domestic Animal Diversity (MoDAD)
 - 4.2. On-station Production Characterization
 - 4.3. On-farm Production Characterization and Assessment of Production and Market Potentials
 - 4.4. Molecular Genetic Characterization
5. Management of Animal Genetic Resources
 - 5.1. Characterization and Appropriate Management of Existing Genetic Variability
 - 5.2. Characterization and the Appropriate Choice of Breeds for Production Improvement
 - 5.3. Farmer Participation in Conservation of Animal Genetic Resources

Extensive Livestock Production: Grazing Management on Rangelands

327

J. Holechek, *New Mexico University, Las Cruces New Mexico, USA*

A. Deregibus, *University of Buenos Aires, Argentina*

M. Osterheld, *University of Buenos Aires, Argentina*

1. Introduction
2. Grazing Intensity
3. Grazing Studies in the United States
 - 3.1. Description by Grazing Region
 - 3.2. Forage Production and Stocking Rate
 - 3.3. Range Trend and Stocking Rate
 - 3.4. Livestock Production and Stocking Rate
 - 3.5. Financial Returns and Stocking Rate
4. Range Vegetation and Grazing System
5. Livestock Performance and Grazing System
6. Financial Returns and Grazing System
7. Grazing Systems Versus Grazing Intensity
8. Season of Use Versus Grazing Intensity
9. Grazing Studies by Vegetation Type
 - 9.1. Deserts
 - 9.2. Semiarid Grasslands
 - 9.3. Humid Grasslands
 - 9.4. Annual Grasslands
 - 9.5. Coniferous Forest
 - 9.6. Humid Woodlands
10. Consideration of Grazing Systems
 - 10.1. Continuous Grazing
 - 10.2. Deferred Rotation Grazing
 - 10.3. Rest–Rotation Grazing
 - 10.4. High-intensity–Low-frequency Grazing
 - 10.5. Short Duration Grazing
 - 10.6. The Merrill Three Herd/Four Pasture System
 - 10.7. Best Pasture Grazing
 - 10.8. Seasonal Suitability

Livestock Production in Feedlots/Landless Systems

346

R. D. Sainz, *Department of Animal Science, University of California, Davis, USA*

D. P. Lanna, *Escola Superior de Agricultura Luiz de Queiroz, Universidade de São Paulo, Piracicaba, Brasil*

1. Introduction

2. Animals
3. Health
4. Nutrition
5. Growth Manipulation
6. Marketing
7. Waste Disposal/Nutrient Management

Livestock Diversification: Issues and Trends **361**

Robert J. Hudson, *University of Alberta, Edmonton, Alberta, Canada*

1. Introduction
2. Emergence
3. Status of Farmed Wildlife
 - 3.1. Bison Industry
 - 3.2. World Deer Industry
4. Products and Markets
 - 4.1. Venison
 - 4.2. Antlers
 - 4.3. Sport Hunting
 - 4.4. Genetics
5. Issues
 - 5.1. Ecological Sustainability
 - 5.2. Species Conservation
 - 5.3. Natural Advantage
 - 5.4. Welfare Issues
 - 5.5. Community Development Issues
6. Future

Index **375**

About EOLSS **385**

VOLUME II

Controlled Adaptive Natural Resources Management **1**

Mustafa Kamal, *Faculty of Design and Architecture, Universiti Putra Malaysia, Selangor, Malaysia*

1. Controlled Adaptive Natural Resources Conservation
2. Need for Controlled Adaptive Approach
3. Philosophical Approach
4. Definitions and Basic Concepts
 - 4.1. Bioregional Planning
 - 4.2. Ecological Planning
 - 4.3. Ecosystem Approach
 - 4.4. Landscape Accountability
 - 4.5. Living Landscape
 - 4.6. Land Ethic
 - 4.7. Sustainable Landscape Design
 - 4.8. Ecological Planting Design
 - 4.9. Eco-Engineering
5. Controlled Adaptive Approach in Planning of Development
 - 5.1. Bioregional Resource Inventory
 - 5.2. Opportunity and Constraint Studies
 - 5.3. Land Capability and Carrying Capacity Studies

- 5.4. Hazard Assessment Studies
- 5.5. Impact Forecasting
- 5.6. Site Selection and Feasibility Studies
- 5.7. Facility Planning
- 5.8. Master Planning
- 5.9. Management Planning
6. Controlled Adaptive Approach in Site Design
7. Controlled Adaptive Approach in Land Management
8. Information Technology and Controlled Adaptive Approach
9. Conclusion

Integrated Production Systems

13

Dahlan Ismail, *Department of Animal Science, Universiti Putra Malaysia, Serdang, Malaysia*

1. Agricultural Industry and Land Use
2. Integrated Systems
 - 2.1. Integrated Livestock–Crop Production System
 - 2.2. Utilization of Agricultural By-Products
 - 2.3. Reclaimed and Idle Land for Ruminants
3. Systems Analysis Methodology for Integrated Production Systems
4. Conclusion

BioParks: Integrated Production/Recreational Systems

20

Dahlan Ismail, *Faculty of Agriculture, Universiti Putra Malaysia, Serdang, Malaysia*

1. Introduction
2. Processes
3. Components
4. Concepts
 - 4.1. Mammalian Herbivore–Plant Interaction
 - 4.2. Herbivory and Its Impact
 - 4.3. Plant–Animal Interaction in Relation to Herbivory
 - 4.4. Concept of Carrying Capacity
5. Conclusion

Management of Forestry Enterprises

33

Chadwick D. Oliver, *Professor of Silviculture and Forest Ecology, College of Forest Resources, University of Washington, Seattle, U.S.A.*

J. P. Kimmins, *Professor of Forest Ecology, Faculty of Forestry, University of British Columbia, Vancouver, Canada.*

1. The Forest as Many Resources
 - 1.1. The Changing Values of Forests
 - 1.2. Approach of this Paper
2. Changing Understanding/Changing Resources
 - 2.1. The Nature of Forests
 - 2.2. Historical Perspective
 - 2.2.1. Early Uses
 - 2.2.2. Resources Change
 - 2.2.3. Responses to Changing Resources
 - 2.2.3.1. Conserving the Remaining Resource
 - 2.2.3.2. Increasing the Amount of the Resource
 - 2.2.3.3. Adapting to Change in Resource Availability through Technology and Substitution
 - 2.2.3.4. Migrating to Areas where the Resource Shortage is not as Critical
 - 2.2.3.5. Importing/Exporting the Resources through Trade or War

3. Present Perspective
 - 3.1. Globalization and Emerging, Common Forest Values
 - 3.2. Managing Forests as Ecosystems
 - 3.3. Hierarchical Nature of Forest Management
 - 3.4. Decision Application of Analysis Sciences to Forest Management
4. Inventory: Present and Future Resources and their Conditions
 - 4.1. Criterion # 1. Conservation of Biological Diversity
 - 4.2. Criterion # 2. Maintenance of the Productive Capacity of Forest Ecosystems
 - 4.3. Criterion # 3. Maintenance of Forest Ecosystem Health and Vitality
 - 4.4. Criterion # 4. Conservation and Maintenance of Soil and Water Resources
 - 4.5. Criterion # 5. Maintenance of Forest Contribution to Global Carbon Cycles
 - 4.6. Criterion # 6. Maintenance and Enhancement of Long-term Multiple Socio-economic Benefits to Meet the Needs of Society
 - 4.7. Criterion # 7. Legal, Institutional, and Economic Framework for Forest Conservation and Sustainable Management
5. Forest Policy: Approaches to Resource Allocation and Ownership over the Broad Scale
 - 5.1. Conserving Resources
 - 5.2. Increasing the Resource
 - 5.2.1. Intensive Plantations
 - 5.2.2. Integrated Management
 - 5.2.3. Blending the Approaches
 - 5.3. Substituting among Resources
 - 5.4. Migration
 - 5.4.1. Migration of the Timber Industry
 - 5.4.2. Migration of People
 - 5.5. Importing Resources
6. Forest Management under Different Policies
7. Silviculture
 - 7.1. Silviculture Operations
 - 7.2. Silvicultural Pathways
 - 7.3. Landscape Management
8. Future Trends in Forest Management

Trends in Resources Provided by Forests

65

John Perez-Garcia, *College of Forest Resources, University of Washington, USA*

1. What is a Forest Resource and Why
 - 1.1. Forest-based Biological Diversity
 - 1.2. Productive Capacity
 - 1.3. Forest Health
 - 1.4. Soil and Water Conservation
 - 1.5. Carbon Sequestration
2. History of Different Uses and Causes of Change
3. Present Condition and Future Trends of Resources and Its Value
 - 3.1. Present Conditions
 - 3.2. Future Trends

Trends in Ownerships and Policies Relative to Forest Resources

80

C. M. Ryan, *University of Washington, USA*

1. Introduction
2. Trends in Forest Ownership
 - 2.1. Asia and the Pacific
 - 2.2. Japan
 - 2.3. The Near East (Southwest Asia)
 - 2.4. Africa

- 2.5. Europe and the Former USSR
- 2.6. Latin America and the Caribbean
- 2.7. North America
- 3. Issues and Trends in Forest Planning, Policies and Institutions
 - 3.1. Developments in Forest Planning and Legislation
 - 3.2. Interrelationship between Forests and Other Economic Sectors
 - 3.2.1. Timber Concession and Subsidy Reform
 - 3.3. Land Ownership and Tenure
 - 3.3.1. Private Woodland Owners
 - 3.4. An Emerging Institutional Framework
 - 3.4.1. Decentralization
 - 3.4.2. Privatization
 - 3.4.3. Increased Participation in Planning and Management

Organization and Management Systems for Providing Sustainable Forest Resources **96**
 B. Bruce Bare, *University of Washington, Seattle, USA*

- 1. Forest Management Systems
- 2. Forest Management Organizations
- 3. Forest Management Approaches
- 4. Classification of Management Systems
- 5. Assessment and Emerging Concerns

Silviculture Around the World: Past, Present, and Future Trends **114**
 Patrick J. Baker, *University of Washington, USA and Institute of Pacific Islands Forestry, USDA Forest Service, USA*
 Jeremy S. Wilson, *USDA Forest Service, PNW Research Station, USA and University of Maine, USA*
 Robert I. Gara, *University of Washington, USA*

- 1. Introduction
- 2. Where Are We Coming From? An Abridged History of Silviculture
 - 2.1. What is Silviculture?
 - 2.2. Aboriginal Silviculture
 - 2.3. Unregulated Exploitation
 - 2.4. Origins of Modern Silviculture
 - 2.5. The Practice of Silviculture
 - 2.6. Quantifying Silviculture
 - 2.7. Tropical Silviculture
- 3. Where Are We? More Recent Trends in Silviculture
 - 3.1. Advances in Knowledge and Technology
 - 3.2. Stand Structure
 - 3.3. Desired Objectives: Moving the Goalposts
- 4. Where Are We Going? The Future of Silviculture
 - 4.1. Scale, Complexity, and Silviculture

Fisheries Management: Sustainability vs. Reality **129**
 Daniel Pauly, *Fisheries Centre, University of British Columbia, Vancouver, Canada*

- 1. Introduction: From Foraging to Industrial Fishing
- 2. Large-scale vs. Small-scale Fisheries
- 3. Three Cases of Absent Sustainability
 - 3.1. Hypothesis: Resources are Inevitably Overexploited
 - 3.2. Case I: Fishing down Marine Food Webs
 - 3.3. Case II: Bottom Trawling
 - 3.4. Case III: Northern cod off Canada

- 3.5. Shifting Baselines as Aggravating Factor
4. Beyond Sustainability: Toward Rebuilding Healthy Ecosystems

Aboriginal Fisheries Issues: The West Coast of Canada as a Case Study **140**

Nigel Haggan, *Fisheries Centre, University of British Columbia, Vancouver, Canada*

Pamela Brown, *Museum of Anthropology, University of British Columbia, Vancouver, Canada*

1. First Nations: Culture and Identity
2. Impact of Modern Industrial Fisheries on First Nations
3. A Proposal for Conservation and Restitution

The Fishing Enterprise and Fisheries Management **146**

Ussif Rashid Sumaila, *Chr. Michelsen Institute, Bergen, Norway, and Fisheries Centre, University of British Columbia, Vancouver, Canada*

1. Introduction: The Economic Dimension of Fisheries
2. What is an Enterprise and How Does an Enterprise Behave?
3. How Does the Behavior of Enterprises Affect Fishery Resources?
 - 3.1. Market Versus Non-market Values
 - 3.2. Enterprises Operating Under Open Access
 - 3.3. Enterprises Operating Under Common and Private Property
4. Challenges to Fisheries Management
 - 4.1. Conditions for Meeting the Challenges
 - 4.2. Use of the Best Available Science
 - 4.3. Regulation and Control
 - 4.4. Overcapacity and Subsidies
 - 4.5. Technology: Problems and Opportunities
5. Conclusions: Getting the Incentives Right

Food For The Future: Developing Strategies for Sustainability **153**

Jules Pretty, *Department of Biological Sciences, University of Essex, UK*

1. Introduction
2. Persistent and New World Food Problems
3. The Development of Ideas about Agricultural Sustainability
4. What is Agricultural Sustainability
5. The Environmental Challenge
6. Does Sustainable Agriculture Work
7. Soil Health Improvements
8. Improved Water Efficiencies
9. Minimum-Pesticide Farming
10. Getting the Policies Right
11. Areas of Debate and Disagreement

Regenerative Food Systems **172**

K. A. Dahlberg, *Political Science and Environmental Studies, Western Michigan University, USA*

1. Development of the Concept of Regenerative Food Systems
 - 1.1. The Search for Alternatives to Unsustainable Industrial Agriculture
 - 1.2. From Regenerative Agriculture to Regenerative Food Systems.
 - 1.3. Regenerative Approaches and Analysis
2. The Socionatural Framework
 - 2.1. Different Processes Observable with Different Time-Frames and Scales
 - 2.1.1. Inconsistencies, Gaps, and Uncertainties in Natural Systems Analyses

- 2.1.2. Socio-technological Interactions: Context and Adaptability
3. Regenerative Societies and Food Systems
 - 3.1. Reintegrating Food and Agricultural Systems into Nature and Society
 - 3.2. Policy and Management Frameworks: Coping with Uncertainties in a Time of Transition
4. Regenerating Local and Regional Food Systems
 - 4.1. Building Local and Regional Visions for Sustainable Food Systems
 - 4.2. Identifying Key Contextual Variables, Structures, Trends, Needs, and Goals
 - 4.3. Developing Local and Regional Policies and Management Practices
5. Conclusions

Animal Production In The Tropics

190

C. Devendra, *Consultant Tropical Animal Production Specialist, Kuala Lumpur, Malaysia.*

1. Introduction
2. Rationale for accelerating animal production
3. Role and functions of animals
4. Demand for animal foods
 - 4.1. General principles
 - 4.2. Goals of water treatment and disinfection
 - 4.3. Disinfectants and disinfection byproducts
5. Diversity and Animal Genetic Resources
 - 5.1. Diversity
 - 5.2. Species description
 - 5.2.1. Buffaloes
 - 5.2.2. Cattle
 - 5.2.3. Goats
 - 5.2.4. Sheep
 - 5.2.5. Pigs
 - 5.2.6. Chickens and Ducks
6. Animal production systems
 - 6.1. Types
 - 6.2. Landless systems
 - 6.2.1. Urban and peri-urban industrial landless systems
 - 6.2.2. Rural landless livestock production
 - 6.3. Crop-based systems
 - 6.3.1. Categories
 - 6.3.2. Relevance
 - 6.3.3. Genesis
 - 6.3.4. Diversification and integration
 - 6.3.5. Trends
 - 6.4. Agro-pastoralism
 - 6.5. Rangeland-based systems
7. Opportunities for productivity enhancement
8. Evolving scenarios and emerging issues in the future
9. Conclusions

Management of Agricultural Systems

220

Robert J. Hudson, *University of Alberta, Canada*

1. Introduction
2. World Agrifood System
 - 2.1. Structure and Evolution
 - 2.2. External Factors
3. Technological Adaptation
 - 3.1. Land
 - 3.2. Genetic Resources

- 3.3. Agronomic Practices
 - 3.3.1. Cultivation and Cropping Systems
 - 3.3.2. Nutrient Management
 - 3.3.3. Water Management
 - 3.3.4. Pest Management
- 3.4. Energy and Labor Management
- 3.5. Integrated Production
- 3.6. Storage, Handling, and Distribution
- 3.7. Information Technology
4. Institutional Adaptation
 - 4.1. Subsistence and Community-based Management
 - 4.2. Small Farms
 - 4.3. Cooperatives
 - 4.4. Supply-chain Management and Corporate Concentration
5. Policy Adaptation
 - 5.1. Agriculture and Food Policy
 - 5.2. Trade Policy
6. Implications for Sustainability
 - 6.1. Environmental Challenges
 - 6.1.1. Chemical Contaminants
 - 6.1.2. Soil Degradation
 - 6.1.3. Water Supplies and Eutrophication
 - 6.1.4. Global Warming
 - 6.1.5. Biodiversity and Bioinvasions
 - 6.2. Meeting Global Food Needs Sustainably
 - 6.2.1. Environmental Policy
 - 6.2.2. Pricing to Reflect Environmental Costs
 - 6.2.3. Reducing Inputs
 - 6.2.4. Adopting New Technologies
 - 6.2.5. Encouraging Local Diversification
 - 6.2.6. Research and Development

Technologies for Increasing Food Production

241

Surdev S. Khush, *International Rice Research Institute, Manilakati, Philippines*
 Mahabub Hossain, *International Rice Research Institute, Manilakati, Philippines*

1. Introduction
2. Genetic Improvement Strategies
 - 2.1. Increasing Yield Potential
 - 2.1.1. Conventional Hybridization and Selection Procedures
 - 2.1.2. Ideotype Concept for Increasing Yield Potential
 - 2.1.3. Exploitation of Heterosis
 - 2.1.4. Wide Crosses
 - 2.1.5. Biotechnology Approaches
3. Increasing Yield Stability
 - 3.1. Crop Improvement for Pest Resistance
 - 3.1.1. Genes for Insect Resistance
 - 3.1.2. Genes for Disease Resistance
 - 3.1.3. Durability of Resistance
 - 3.2. Developing Crop Cultivars for Weed Control
 - 3.3. Breeding Crop Cultivars for Abiotic Stress Tolerance
4. Improvement of Germplasm with Increased Production Efficiency
 - 4.1. Breeding for Shorter Growth Duration
 - 4.2. Breeding for Nutrient Use Efficiency
 - 4.3. Breeding for Higher Biological Nitrogen Fixation (BNF)
 - 4.4. Crop Improvement to Reduce Post-harvest Losses
5. Management Strategies

- 5.1. Integrated Nutrient Management
- 5.2. Soil Management
- 5.3. Crop Management
- 5.4. Water Management
- 5.5. Pest Management
 - 5.5.1. Cultural Control
 - 5.5.2. Biological Control
 - 5.5.3. Chemical Control
 - 5.5.4. Biopesticides
 - 5.5.5. Integrated Pest Management
 - 5.5.6. Weed Management
- 6. Farmer-friendly Public Policies
 - 6.1. Investment for Improved Water Control
 - 6.2. Development of Marketing Infrastructure
 - 6.3. Supply of Credit to Subsistence Farmers
 - 6.4. Property Rights
 - 6.5. Land Reforms
 - 6.6. Reforming the Agricultural Extension System

Origins of Plant Agriculture and Major Crop Plants **271**

Paul Gepts, *Department of Agronomy and Range Science, University of California, Davis, USA*

- 1. Introduction
- 2. Principal Attributes of Agricultural Origins and Crop Domestication
 - 2.1. Geography and Ecology of the Origin of Agriculture and Domestication
 - 2.2. The Concept of Domestication
 - 2.3. The Genetics of Domestication
- 3. Conclusion

Diversifying Agriculture with Alternative Crops **287**

Robert L. Myers, *Thomas Jefferson Agricultural Institute, Columbia, MO, USA*

- 1. Introduction
- 2. Benefits of Diversification
- 3. Oilseeds
- 4. Cereal Grains
- 5. Legumes
 - 5.1. Warm Season Legumes
 - 5.2. Cool Season Legumes
- 6. Fiber Crops
- 7. Alternative Crops for Other Uses

Index **313**

About EOLSS **323**
