CONTENTS

Preface

vii

Pregnancy Recognition Signaling, Fetal-Placental Development and Prenatal Fetal Programming	1
Fuller W. Bazer, <i>Texas A&M University1, College Station, Texas 77843-2471 USA and WCU Biomodulation Major, Department of Agricultural Biotechnology, Seoul National University, 599 Gwanak-ro, Gwanak-gu, Seoul 151-921, Korea</i>	
Greg A. Johnson, <i>Texas A&M University, College Station, Texas 77843-2471, USA</i>	
Gwonhwa Song, <i>WCU Biomodulation Major, Department of Agricultural Biotechnology, Seoul National University, 599 Gwanak-ro, Gwanak-gu, Seoul 151-921, Korea</i>	
Guoyao Wu, <i>Texas A&M University, College Station, Texas 77843-2471, USA</i>	

1. Introduction
2. Gene expression for uterine proteins and nutrient transporters
 - 2.1. Temporal and spatial changes in steroid hormone receptors in the uterus during the peri-implantation period of pregnancy
3. Pregnancy recognition
 - 3.1. Luteotrophic versus antiluteolytic signaling for pregnancy recognition
 - 3.2. Corpus luteum formation and regression
 - 3.3. Pregnancy recognition signals for maintenance of corpora lutea
 - 3.3.1. Primates
 - 3.3.2. Rodents
 - 3.3.3. Ruminants
 - 3.3.4. Pigs
 - 3.3.5. Horse
 - 3.3.6. Cat
 - 3.3.7. Dog
 - 3.3.8. Rabbit
4. Implantation
 - 4.1. Strategies for implantation
 - 4.1.1. Primates
 - 4.1.2. Rodents
 - 4.1.3. Ruminants
 - 4.1.4. Pigs
5. Servomechanisms regulating uterine gland morphogenesis and secretory function
6. Fetal growth and development
 - 6.1. Sheep
 - 6.2. Pigs
7. Intra-uterine growth restriction
8. Adult onset of diseases and fetal programming
9. Summary and Conclusions

Reproductive Physiology-Endocrinology	53
V́ctor H. Parraguez, <i>Faculty of Veterinary Sciences and Faculty of Agricultural Sciences, University of Chile.</i>	
Marcelo Ratto, <i>Faculty of Veterinary Sciences, Austral University of Chile.</i>	
Oscar Peralta, <i>Faculty of Veterinary Sciences, University of Chile.</i>	

1. Introduction.
2. Central Physiological Control of Reproduction: Hypothalamus-Pituitary-Gonadal axis.
 - 2.1. The Hypothalamic Level
 - 2.1.1. Hypothalamic Control of Puberty and Seasonal Reproduction
 - 2.1.2. Hypothalamic Control of Reproductive Cycle
 - 2.2. The Pituitary-Gonadal Level

3. Physiological control of reproduction in seasonal breeder farm animals.
 - 3.1. Reproduction in Small Ruminants
 - 3.1.1. Physiological Control of Reproduction in Sheep and Goats
 - 3.1.2. Physiological Control of Reproduction in Ram and Buck
 - 3.2. Reproduction in Horses
 - 3.2.1. Physiological Control of Reproduction in the Mare
 - 3.2.2. Physiological Control of Reproduction in the Stallion
4. Physiological control of reproduction in non-seasonal breeder farm animals
 - 4.1. Reproduction in Cattle
 - 4.1.1. Physiological Control of Reproduction in the Cow
 - 4.1.2. Physiological Control of Reproduction in the Bull
 - 4.2. Reproduction in Pigs
 - 4.2.1. Physiological Control of Reproduction in the Sow
 - 4.2.2. Physiological Control of Reproduction in the Boar
5. Conclusions

Seasonal and Social Factors Affecting Reproduction

85

Rodolfo Ungerfeld, *Departamento de Fisiología, Facultad de Veterinaria, Universidad de la República, Montevideo, Uruguay*

Alejandro Bielli, *Departamento de Morfología y Desarrollo, Facultad de Veterinaria, Universidad de la República, Montevideo, Uruguay*

1. Introduction
2. Environmental regulation of reproduction in mammals
 - 2.2. Seasonal reproductive strategies
 - 2.3. Extrinsic and intrinsic factors and ultimate and proximate factors influencing seasonal reproduction
 - 2.3.1. Ultimate factors
 - 2.3.2. Energy balance
 - 2.3.3. Nutrients
 - 2.3.4. Competence for food and predation pressure
 - 2.3.2. Proximate factors:
 - 2.4. Mechanisms regulating seasonal reproduction with photoperiod as a predictor
 - 2.5. Seasonal reproduction in livestock species
 - 2.5.1. Sheep
 - 2.5.2. Goats
 - 2.5.3. Cattle
 - 2.5.4. Swine
3. Socio-sexual signals
 - 3.1. The ram effect
 - 3.1.1. Managing the ram effect
 - 3.1.2. The ram effect in cyclic ewes
4. Socio-sexual signals and seasonal reproductive patterns
5. General overview

Interface Between Nutrition And Reproduction: The Very Basis Of Production

108

C. A. Meza-Herrera, *Universidad Autónoma Chapingo, Unidad Regional Universitaria de Zonas Áridas, Bermejillo, Durango, México, 35230*

M. Tena-Sempere, *Universidad de Córdoba, Instituto Maimonides de Investigaciones Biomédicas (IMIBIC) & CIBER Fisiopatología de la Obesidad y Nutrición, Córdoba, España, 14004*

1. Introduction: Interface between nutrition, reproduction and animal production
2. Basic aspects on intermediary metabolism: Hormonal control of energy homeostasis
 - 2.1. Basic Principles of Energy Homeostasis and Intermediate Metabolism
 - 2.2. Hormonal Regulation of Fuel Metabolism and Food Intake
3. Basic aspects of reproduction: Neuroendocrine regulation
 - 3.1. The Reproductive Axis: Major Elements and Regulatory Loops

- 3.2. The GnRH System at Prepuberal and Peripuberal Stages
4. Integration of nutrition and reproduction: Neuroendocrine mechanisms
5. Direct roles of nutrition in modulating reproductive function
6. The Kiss1 system: Novel transducer for the metabolic control of reproduction
 - 6.1. Kiss1, Kisspeptins and GPR54: A Basic Approach
 - 6.2. The Kiss1 system and the Reproductive Brain
 - 6.3. Major Roles of the Kiss1 System in the Control of the HPG Axis
 - 6.4. The Kiss1 System as Transducer of Environmental Cues: Nutritional/Metabolic Communication
7. Nutrition, birth weight, fetal programming & the energy metabolism of the new born
 - 7.1. Birth Weight, Intrauterine Growth Retardation and Fetal Programming
8. Final considerations

Female Factors Affecting Embryo Viability. Embryo Cryopreservation 143

Carmen Díez, José Néstor Caamaño, Beatriz Trigo, Marta Muñoz and Enrique Gómez, *Área de Genética y Reproducción Animal. Centro de Biotecnología Animal – SERIDA - Camino de Rioseco 1225, La Olla – Deva - 33394 Gijón, Spain.*

1. Embryonic Development and Viability in Livestock Species
 - 1.1. Techniques for analyzing maternal contributions to embryonic viability
 - 1.2. Physiological basis of embryonic viability in the female genital tract
2. Evaluation of Embryonic Viability
 - 2.1. Introduction
 - 2.2. Morphological evaluation
 - 2.3. Timing of embryo development
 - 2.4. Total cell counts and differential cell staining
 - 2.5. Metabolic test and markers for embryo viability
 - 2.6. Gene expression *in vivo* vs. IVP embryos
 - 2.7. Metabolomic and single embryo culture
 - 2.8. Other approaches to assess embryo viability.
 - 2.9. Evaluation of embryo viability after cryopreservation.
3. The Oocyte and the Follicular Environment. Superovulation. Young vs. Adult Females
4. Embryo Cryopreservation
 - 4.1. Cryopreservation in biology. Principles
 - 4.2. Why cryopreserve embryos?
 - 4.3. Fundamentals and cryopreservation procedures
 - 4.4. Importance of the embryo production systems and cryopreservation: selecting the appropriate protocol.
5. Conclusions.

Livestock Semen Biotechnology and Management 187

Heriberto Rodríguez-Martínez, *Department of Clinical and Experimental Medicine, Faculty of Health Sciences, Linköping University, SE-581 85 Linköping, Sweden*

1. Introduction
2. Semen collection, assessment and handling in livestock
3. Semen preservation for artificial reproduction techniques
4. Future trends
5. Conclusions

Embryo Production 203

Fiammetta Berlinguer, *Department of Animal Biology, University of Sassari, Via Vienna 2, 07100 Sassari, Italy*

1. Introduction
2. *In vitro* embryo production
 - 2.1. Collection of oocytes
 - 2.1.1. Abattoir material

- 2.1.2. Ovum-Pick-Up (OPU) technique
- 2.2. Oocyte in vitro maturation (evaluation of oocytes)
- 2.3. *In vitro* fertilization
 - 2.3.1. Sperm preparation for IVF
 - 2.3.2. Other fertilization approaches
- 2.4. Embryo culture
- 3. *In vivo* embryo production
 - 3.1. Superovulation treatments
 - 3.2. Embryo evaluation and transfer procedures
- 4. Conclusions

Reproductive Management in Cattle and Sheep

218

Marcos G. Colazo and John P. Kastelic, *Alberta Agriculture and Rural Development, Edmonton, Alberta, Canada. Agriculture and Agri-Food Canada, Lethbridge, Alberta, Canada*

- 1. Introduction
- 2. Reproductive management of beef cattle
 - 2.1. Management of beef cows
 - 2.2. Management of replacement beef heifers
 - 2.3. Calving difficulty
 - 2.4. Reducing calf losses in beef herds
 - 2.5. Management of bulls
- 3. Reproductive management of dairy cattle
 - 3.1. Management of dairy cows
 - 3.2. Managing body condition score (BCS)
 - 3.3. Management of replacement dairy heifers
 - 3.4. Measures of reproductive efficiency in dairy herds
 - 3.5. Pregnancy diagnosis
 - 3.6. Estrus detection
 - 3.7. Managing artificial insemination (AI)
 - 3.8. Use of sexed semen
- 4. Management of reproduction in sheep
 - 4.1. General management
 - 4.2. Seasonality
 - 4.3. Rams
 - 4.4. Nutrition and reproduction
 - 4.5. Ram effect
 - 4.6. Assisted reproductive technologies
 - 4.7. Pregnancy diagnosis

Pharmacological Management of the Ovarian Function

243

Alejo Menchaca, *Fundación IRAUy, Instituto Reproducción Animal Uruguay, Montevideo, Uruguay.*
 Gabriel A. Bó, *Instituto de Reproducción Animal Córdoba (IRAC), Córdoba, Argentina.*

- 1. Introduction
- 2. Ovarian physiology
 - 2.1. Oocyte development
 - 2.2. Folliculogenesis
 - 2.3. Antral follicle development in wave-like patterns
 - 2.4. Corpus luteum and luteolysis
- 3. Hormones and pharmaceutical drugs
 - 3.1. Gonadotropin releasing hormone (GnRH)
 - 3.2. Follicle stimulating hormone (FSH)
 - 3.3. Luteinizing hormone (LH)
 - 3.4. Progesterone
 - 3.5. Estrogens
 - 3.6. Prostaglandin (PG) F_{2α}

- 3.7. Equine chorionic gonadotropin (eCG).
- 4. Control of the estrous cycle
 - 4.1. Treatments with PGF_{2α}
 - 4.2. Treatments with progesterone
- 5. Manipulation of follicular waves for fixed-time artificial insemination (FTAI).
 - 5.1. Treatments with GnRH and PGF_{2α}
 - 5.2. Treatments with progesterone and estradiol
 - 5.3. Treatments for FTAI in sheep and goats
 - 5.3.1. Treatments with progesterone and eCG
 - 5.3.2. Treatments with PGF_{2α}
- 6. Ovarian superstimulation and embryo transfer
 - 6.1. Manipulation of the follicular wave for superstimulation in cattle
 - 6.1.1. Control of follicular dominance
 - 6.1.2. Control of progesterone levels
 - 6.1.3. Gonadotropin treatments
 - 6.1.4. Synchronization of ovulation
 - 6.2. Superovulation in sheep and goats
 - 6.3. Fixed-time embryo transfer (FTET)
- 7. Final remarks

Vaginal Surgery in the Cow

277

Laura Elvira-Partida, *TRIALVET S.L., C/ Encina, 22, 28721 Cabanillas de la Sierra, Madrid, Spain*
 Susana Astiz, *Department of Animal Reproduction, INIA, Avda Pta. de Hierro s/n, 28040 Madrid, Spain*
 Natividad Perez-Villalobos, *TRIALVET S.L., C/ Encina, 22, 28721 Cabanillas de la Sierra, Madrid, Spain*
 Juan Vicente Gonzalez-Martin, *TRIALVET S.L., C/ Encina, 22, 28721 Cabanillas de la Sierra, Madrid, Spain and Prof. Department of Animal Medicine and Surgery, Faculty of Veterinary Medicine, Universidad Complutense de Madrid (UCM), Avda Pta. de Hierro s/n, 28040 Madrid, Spain*

- 1. Introduction
- 2. Anatomy Fundamentals
 - 2.1. Anatomy of Cow External Genitalia
 - 2.1.1. Vulva
 - 2.1.2. Vagina
 - 2.1.3. Cervix
 - 2.2. Closures or Seals of the Cow Genital Tract
 - 2.3. Relationships between External Genitalia and Other Anatomical Structures in the Cow
- 3. Genital Tract Exploration
 - 3.1. External Exploration
 - 3.1.1. Rectal Palpation
 - 3.1.2. Vaginal Examination
- 4. General Presurgical Considerations
 - 4.1. Immobilization and Anesthesia
 - 4.1.1. Immobilization
 - 4.1.2. Anesthesia
 - 4.2. Regional Analgesia
 - 4.2.1. Low Caudal Epidural
 - 4.3. Surgical Material
 - 4.4. Surgical Preparation
- 5. Vaginal Pathologies and Surgical Resolution
 - 5.1. Vaginal Prolapse
 - 5.1.1. Pathogenesis
 - 5.1.2. Classification of Vaginal Prolapse
 - 5.1.3. Repositioning of the Prolapsed Vagina
 - 5.1.4. Surgical Methods of Retention
 - 5.1.5. Criteria for Choosing the Surgical Method
 - 5.2. Pneumovagina, Vaginal Tears and Rectovaginal Fistula
 - 5.2.1. Etiology and Pathogenesis

- 5.2.2. Surgical Resolution
- 5.3. Urovagina
 - 5.3.1. Etiology and Pathogenesis
 - 5.3.2. Diagnosis
 - 5.3.3. Surgical Resolution of Urovagina
 - 5.3.4. Surgical Resolution of Urovagina Associated With Pneumovagina
- 5.4. Episiotomy to Prevent Tears at the Time of Calving
- 5.5. Other Vaginal Pathologies
 - 5.5.1. Congenital Abnormalities of the Vagina
 - 5.5.2. Vestibular Gland Cysts
 - 5.5.3. Gartner Duct Cysts
 - 5.5.4. Vaginal Tumors
 - 5.5.5. Perivaginal Fat Prolapse
 - 5.5.6. Injuries Caused By Dogs

Genetic basis and improvement of reproductive traits 318

Cristina Óvilo and Carmen Rodríguez Valdovinos, *Departamento de Mejora Genética Animal. INIA, Madrid, Spain*

- 1. Introduction
- 2. Reproductive traits
- 3. Quantitative genetics
- 4. Molecular genetics approaches
 - 4.1. Candidate gene studies
 - 4.2. QTL detection studies
 - 4.3. High throughput genotyping: Genome-wide association studies and Genomic selection
 - 4.4. Gene and genome expression studies
- 5. Perspectives
