CONTENTS

VOLUME I

Computational Methods and Algorithms	1
<i>V.V. Shaidurov, Institute of Computational Modelling, Russian Academy of Sciences, Krasnoyarsk, Russia</i>	

1. Introduction
2. Mathematical modeling
3. Discretization process
4. Combination of the discretization and solution process
5. Parallelism and decomposition
 - 5.1. Schwarz methods and the domain decomposition
6. Solution process
 - 6.1. Efficient algorithms
 - 6.2. Hierarchical structures
 - 6.2.1. Fast Fourier transform
 - 6.2.2. Wavelets
 - 6.2.3. Solving sparse systems by the multigrid method
 - 6.3. Difficulties due to complicated geometries
 - 6.4. Robustness versus efficiency
 - 6.5. The solving time-dependent problems
7. Implementation aspects

Basic Methods for Solving Equations of Mathematical Physics	29
<i>V.K. Andreev, Institute of Computational Modeling Russian Academy of Sciences, Russia</i>	

Introduction

1. Analytical methods for problems of mathematical physics
 - 1.1. Methods of the Potential Theory
 - 1.1.1. Green's Formulae
 - 1.1.2. Fundamental Solutions. Parametrix
 - 1.1.3. Functional Spaces and a priori Estimates of the Operator T_{x_0}
 - 1.1.4. Local Existence Theorems
 - 1.1.5. Internal Estimates of the Shauder Type and Smoothness of a Solution
 - 1.1.6. Volume Potential. Simple and Double Layer Potentials
 - 1.1.7. Heat Potentials
 - 1.1.8. Green's Function
 - 1.2. Eigenvalue Problems. Methods of Eigenfunctions
 - 1.2.1. General Description of the Method of Separation of Variables
 - 1.2.2. The Method of Separation of Variables for Boundary Value Problems of Mathematical Physics
 - 1.2.3. Curvilinear Coordinate Systems
 - 1.3. Methods of Integral Transforms
 - 1.4. Methods of Transformation Groups
2. Approximate methods
 - 2.1. Discretization Methods in Mathematical Physics
 - 2.1.1. The Finite Difference Method
 - 2.1.2. The Finite Element Method
 - 2.2. Methods for Non-linear Problems
 - 2.2.1. Differentiation in Normed Spaces
 - 2.2.2. Newton's Method for Nonlinear Operators
 - 2.2.3. Monotone Operators in Partially Ordered Banach Spaces
 - 2.3. Variational Formulations of Problems. Variational Methods
 - 2.3.1. Sobolev Spaces
 - 2.3.2. Weak Solutions of Problems of Mathematical Physics

- 2.3.3. Variational Methods
- 2.3.4. Projection Methods

Methods of Potential Theory**79**V.I. Agoshkov, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*P.B. Dubovski, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*

1. Introduction
2. Fundamentals of the Potential Theory
 - 2.1. Some Elements from Calculus
 - 2.1.1. Basic Orthogonal Coordinates
 - 2.1.2. Basic Differential Operations on a Vector Field
 - 2.1.3. Formulae from the Field Theory
 - 2.1.4. Basic Properties of Harmonic Functions
 - 2.2. Volume Mass or Charge potential
 - 2.2.1. Newton's (Coulomb's) potential
 - 2.2.2. Properties of Newton's Potential
 - 2.2.3. Potential of a Homogenous Sphere
 - 2.2.4. Properties of the Potential of Volume-distributed Masses
 - 2.3. Logarithmic Potentials
 - 2.3.1. Definition of the Logarithmic Potential
 - 2.3.2. Properties of the Logarithmic Potential
 - 2.3.3. Logarithmic Potential of a Disk of Constant Density
 - 2.4. Simple Layer Potential
 - 2.4.1. Simple Layer Potential in the 3D space
 - 2.4.2. Properties of the Simple Layer Potential
 - 2.4.3. Potential of a Homogenous Sphere
 - 2.4.4. Simple Layer Potential on the Plane
 - 2.5. Double Layer Potential
 - 2.5.1. Dipole Potential
 - 2.5.2. Double Layer Potential in the Space and its Properties
 - 2.5.3. Double Layer Logarithmic Potential and its Properties
3. Application of the Potential Theory to the Classical Problems of Mathematical Physics
 - 3.1. Solution of the Laplace and Poisson Equations
 - 3.1.1. Formulation of Boundary Value Problems for the Laplace Equation
 - 3.1.2. The Dirichlet Problem in the 3D Space
 - 3.1.3. The Dirichlet Problem on the Plane
 - 3.1.4. The Neumann Problem
 - 3.1.5. The Third Boundary Value Problem for the Laplace Equation
 - 3.1.6. The Boundary Value Problem for the Poisson Equation
 - 3.2. Green's Function of the Laplace Operator
 - 3.2.1. The Poisson Equation
 - 3.2.2. Green's Function
 - 3.2.3. The Dirichlet Problem in a Simple Domain
 - 3.3. The Laplace Equation in a Complex-Shaped Domain
 - 3.3.1. The Schwarz Method
 - 3.3.2. Sweeping-out Method
4. Other Applications of the Potential Method
 - 4.1. Application of the Potential Method to the Helmholtz Equation
 - 4.1.1. Basic facts
 - 4.1.2. Boundary Value Problems for the Helmholtz Equation
 - 4.1.3. Green's Functions
 - 4.1.4. The Equation
 - 4.2. Non-stationary Potentials
 - 4.2.1. Potentials for the 1D Heat Conductivity Equation
 - 4.2.2. Heat Sources in a Multi-dimensional Case
 - 4.2.3. Boundary Value Problem for the Telegraph Equation

Eigenvalue Problems: Methods of Eigenfunctions**125**V.I. Agoshkov, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*V.P. Shutyaev, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*

1. Introduction
2. Eigenvalue problems
 - 2.1. The Formulation of an Eigenvalue Problem and its Physical Meaning
 - 2.2. Eigenvalue problems for differential operators
 - 2.3. Properties of Eigenvalues and Eigenfunctions
 - 2.4. The Fourier Series
 - 2.5. Eigenfunctions of some One-dimensional Problems
3. Special functions
 - 3.1. Spherical Functions
 - 3.2. The Legendre Polynomials
 - 3.3. Cylindrical Functions
 - 3.4. The Chebyshev, Laguerre, and Hermite Polynomials
 - 3.5. The Mathieu Functions and Hypergeometric Functions
4. The method of eigenfunctions
 - 4.1. A General Description of the Method of Eigenfunctions
 - 4.2. The method of Eigenfunctions for Differential Equations of Mathematical Physics
 - 4.3. On the Solution of Problems with Nonhomogeneous Boundary Conditions
5. The method of eigenfunctions for some problems of the theory of electromagnetism
 - 5.1. The Problem on a Bounded Transmission Line
 - 5.2. A Field inside a Sphere with Potential given on its Surface
6. The method of eigenfunctions for the heat conductivity problem
 - 6.1. The Heat Conductivity Problem for a Bounded Rod
7. The method of eigenfunctions for problems of the oscillation theory
 - 7.1. Free Oscillations of a Homogeneous String
 - 7.2. Oscillations of a String with a Moving Endpoint
 - 7.3. The Problem of Free Oscillations of Gas
 - 7.4. Oscillations of a Membrane with Fixed Edge

Methods of Integral Transforms**165**V. I. Agoshkov, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*P. B. Dubovski, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*

1. Introduction
2. Basic integral transforms
 - 2.1. The Fourier Transform
 - 2.1.1. Basic Properties of the Fourier Transform
 - 2.1.2. The Multiple Fourier Transforms
 - 2.2. The Laplace Transform
 - 2.2.1. The Laplace Integral
 - 2.2.2. The Inversion Formula for the Laplace Transform
 - 2.2.3. Limit Theorems
 - 2.3. The Mellin Transform
 - 2.4. The Hankel Transform
 - 2.5. The Meyer Transform
 - 2.6. The Kontorovich-Lebedev Transform
 - 2.7. The Mehler-Foque Transform
 - 2.8. The Hilbert Transform
 - 2.9. The Laguerre and Legendre Transforms
 - 2.10. The Bochner Transform, the Convolution Transform, the Wavelet and Chain Transforms
3. The application of integral transforms to problems of the oscillation theory
 - 3.1. Electric Oscillations
 - 3.2. Transverse Oscillations of a String
 - 3.3. Transverse Oscillations of an Infinite Round Membrane

4. The application of integral transforms to heat conductivity problems
 - 4.1. The Solution of the Heat Conductivity Problem by the use of the Laplace Transform
 - 4.2. The Solution of the Heat Conductivity Problem by the use of the Fourier Transform
 - 4.3. The Problem of Temperature Condition of a Sphere
5. The application of integral transforms in the theory of neutron slow-down and diffusion
 - 5.1. The Solution of the Equation of Neutron Slow-down for Moderator of Infinite Size
 - 5.2. The Problem of Diffusion of Thermal Neutrons
6. The application of integral transforms to problems of hydrodynamics
 - 6.1. Two-dimensional Irrotational Flow of an Ideal Liquid
 - 6.2. Flow of an Ideal Liquid through a Gap
 - 6.3. Outflow of an Ideal Liquid through a Round Aperture
7. The application of integral transforms in the elasticity theory
 - 7.1. Axially Symmetric Stresses in a Cylinder
 - 7.2. The Boussinesq Problem in a Half-space
 - 7.3. Determination of Stresses in a Wedge
8. The application of integral transforms in the coagulation kinetics
 - 8.1. The exact Solution of the Coagulation Equation
 - 8.2. The Violation of the Law of Conservation of Mass
9. Brief instructions for the application of integral transforms

Discretization Methods for Problems of Mathematical Physics **207**
 V.I. Agoshkov, *Institute of Numerical Mathematics, Russian Academy of Sciences, Moscow, Russia*

1. Introduction
2. Finite difference methods
 - 2.1. The Grid Method
 - 2.1.1. Basic Ideas of the Method
 - 2.1.2. General Definitions. Convergence Theorem
 - 2.1.3. The Grid Method for Partial Differential Equations
3. Variational methods
 - 3.1. Basic Notions in Variational Methods
 - 3.1.1. Variational Formulation of a Problem
 - 3.1.2. Basic Ideas behind Direct Methods in Calculus of Variations
 - 3.2. The Ritz Method
 - 3.2.1. The classical Ritz Method
 - 3.2.2. The Ritz Method in an Energy space
 - 3.3. The Method of Least Squares
4. Projection methods
 - 4.1. The Bubnov-Galerkin Method
 - 4.1.1. The Bubnov-Galerkin Method (General Case)
 - 4.1.2. The Bubnov-Galerkin Method (The Case of $A = A_0 + B$)
 - 4.2. Method of Moments
 - 4.3. Projection Methods in Hilbert and Banach Spaces
 - 4.3.1. Projection Method in a Hilbert Space
 - 4.3.2. The Galerkin-Petrov Method
 - 4.3.3. The Projection Method in a Banach Space
 - 4.3.4. The Collocation Method
 - 4.4. Basic Notions in ProjectionGrid Methods

Variational Formulation of Problems and Variational Methods **244**
 Brigitte LUCQUIN-DESREUX, *Laboratoire d'Analyse Numérique, Université Pierre et Marie Curie, Paris, France*

1. Introduction
 - 1.1. Motivation

- 1.2. Principle of the Method
2. The variational method
 - 2.1. The Functional Framework
 - 2.2. The Variational Formulation
 - 2.3. The Lax-Milgram Theorem
 - 2.4. The Symmetric Case
3. Applications of the Lax-Milgram theorem
 - 3.1. The Non-homogeneous Dirichlet Problem
 - 3.2. The Neumann Problem
 - 3.3. Problem with Robin Boundary Conditions
 - 3.4. Problem with Mixed Boundary Conditions
 - 3.5. General Symmetric Second Order Elliptic Problems
 - 3.6. Non-symmetric Problems
 - 3.7. A 4-th Order Problem
4. Extensions of the variational theory
 - 4.1. Linearized elasticity
 - 4.2. The Stokes System
 - 4.3. Elliptic Variational Inequalities
 - 4.4. The Galerkin Method
 - 4.5. A Simple Variation of the Projection Theorem
5. Conclusion

Methods of Transformation Groups

281

V.K. Andreev, *Department of Nonlinear Problems in Mechanics, Institute of Computational Modeling Russian Academy of Sciences, Krasnoyarsk, Russia*

1. Continuous Transformation Groups
 - 1.1. Local Transformation Groups
 - 1.2. Lie Equations
 - 1.3. Invariants
 - 1.4. Invariant Manifolds
2. Invariant Differential Equations
 - 2.1. The Continuation of Point Transformations
 - 2.2. Defining Equation
 - 2.3. Invariant and Partly Invariant Solutions
3. Tangential Transformations
 - 3.1. Contact Transformations
 - 3.2. Tangential Transformations of Finite and Infinite Orders
4. Conservation Laws
 - 4.1. Noether Theorem
 - 4.2. The Action of Connected Algebra
 - 4.3. Examples
5. Bäcklund Transformations
6. Sine-Gordon Equation
7. Korteweg de Vries Equation and Lax Pairs
8. Hirota Transformation and Penleve Property
9. Method of Inverse Scattering Problem
10. Schrodinger Equation

Numerical Analysis and Methods for Ordinary Differential Equations

306

N.N. Kalitkin, *Institute for Mathematical Modeling, Russian Academy of Sciences, Moscow, Russia*
 S.S. Filippov, *Keldysh Institute of Applied Mathematics, Moscow, Russia*

1. Introduction
 - 1.1. Problems of Numerical Analysis
 - 1.1.1. Well-posed Problems

- 1.1.2. Rigor of Studies
- 1.2. Sources of Error
 - 1.2.1. Types of Data and Unknowns and Their Norms
 - 1.2.2. Irreducible Error
 - 1.2.3. Error of a Method
 - 1.2.4. Round-off Error
- 2. The solution of systems of linear equations
 - 2.1. Problems in Linear Algebra
 - 2.2. Systems of Linear Equations
 - 2.2.1. A Review of Methods
 - 2.2.2. Gauss Elimination
 - 2.2.3. The Choice of a Pivot
 - 2.2.4. Special Matrices
 - 2.2.5. The Square Root Method
 - 2.2.6. Ill-conditioned Systems
 - 2.2.7. Iterative Methods
 - 2.2.8. The Fast Fourier Transform
 - 2.3. The Determinant and Inverse of a Matrix
 - 2.3.1. Calculation of the Determinant
 - 2.3.2. Inverse Matrix
 - 2.4. An Eigenvalue Problem
 - 2.4.1. Similarity Transformations
 - 2.4.2. The Givens Method
 - 2.4.3. The Jacobi Method
 - 2.4.4. The QR-algorithm
 - 2.4.5. The Inverse Iteration
- 3. The solution of nonlinear equations and systems
 - 3.1. One-step Methods
 - 3.1.1. The Jacobi Iteration
 - 3.1.2. Rate of convergence
 - 3.1.3. Systems of Equations
 - 3.2. Newton's Method
 - 3.2.1. The Case of One Equation
 - 3.2.2. The Continuous Analogue
 - 3.2.3. Systems of Equations
 - 3.3. Multistep Methods
 - 3.3.1. The Bisection Method
 - 3.3.2. The Method of Secants
 - 3.3.3. The Method of Parabolas
 - 3.4. Elimination of Roots
 - 3.4.1. Roots of a Polynomial
 - 3.4.2. The Case of an Arbitrary Function
- 4. Numerical integration
 - 4.1. Interpolation Formulae
 - 4.1.1. The Trapezoidal Formula
 - 4.1.2. The Euler-Maclaurin Formulae
 - 4.1.3. The Mean Value Formula
 - 4.2. Grid Refinement
 - 4.2.1. Uniform Grids
 - 4.2.2. Recursive Refinement
 - 4.2.3. Quasiuniform Grids
 - 4.3. The Gauss-Christoffel Method
 - 4.3.1. General Formulae
 - 4.3.2. Special Cases
 - 4.4. The Collocation Method
 - 4.4.1. General Formulae
 - 4.4.2. Improper integrals
 - 4.5. Multiple Integrals

- 4.5.1. The Mean Value Formulae
- 4.5.2. Other Formulae
- 5. Interpolation and approximation of functions
 - 5.1. Interpolational Polynomials
 - 5.1.1. Approximation Problems
 - 5.1.2. The Lagrange Interpolational Polynomial
 - 5.1.3. The Newton polynomial
 - 5.1.4. Convergence
 - 5.2. Mean Square Approximation by Polynomials
 - 5.2.1. Generalized Polynomials
 - 5.2.2. Power Series
 - 5.2.3. The Chebyshev Polynomials
 - 5.3. Trigonometric Series
 - 5.3.1. The Fourier Series
 - 5.3.2. The Bessel Formula
 - 5.4. Spline Approximation
 - 5.4.1. Forms of a Spline
 - 5.4.2. *B*-splines
 - 5.4.3. Finite Elements
 - 5.4.4. Mean Square Splines
 - 5.4.5. Interpolational Splines
- 6. Numerical differentiation
 - 6.1. The Derivative of an Interpolational Polynomial
 - 6.1.1. General Formulae
 - 6.1.2. The Simplest Formulae
 - 6.1.3. Uniform Grids
 - 6.1.4. Round-off Errors
 - 6.2. Other Methods
 - 6.2.1. Differentiation of a Spline
 - 6.2.2. Differentiation of the Fourier Series
 - 6.2.3. Derivatives of the Chebyshev Series
 - 6.3. Applications to Problems of Mathematical Physics
 - 6.3.1. Ordinary Differential Equations
 - 6.3.2. Partial Differential Equations
 - 6.3.3. Higher-order Accuracy
- 7. Two-sided methods and interval analysis
 - 7.1. Two-sided Methods
 - 7.2. Interval Analysis
- 8. Numerical methods for ordinary differential equations
 - 8.1. Representation of Ordinary Differential Equations and Formulations of Problems
 - 8.1.1. The Standard Form of ODE
 - 8.1.2. Dynamical Systems
 - 8.1.3. The Cauchy Problem
 - 8.1.4. A Boundary Value Problem
 - 8.1.5. Differential-algebraic Equations
 - 8.1.6. Implicit Differential Equations
 - 8.2. Approximate Methods for the Cauchy Problem
 - 8.2.1. Analytic Methods
 - 8.2.2. Numerical Methods
 - 8.2.3. Stiff Problems
 - 8.3. One-step Methods
 - 8.3.1. Runge-Kutta Methods
 - 8.3.2. Rosenbrock Type Methods
 - 8.4. Linear Multistep Methods
 - 8.4.1. General Properties
 - 8.4.2. The Adams Methods
 - 8.4.3. Upwind Methods
 - 8.4.4. Nordsieck's Representation

- 8.5. Differential Equations with a Retarded Argument
- 9. Conclusion

Solution of Systems of Linear Algebraic Equations**382**Pascal Joly, *Research Engineer, CNRS, France*

- 1. An Unusable Formula
 - 1.1. The Case of a Triangular Matrix
- 2. Direct methods
 - 2.1. Introduction
 - 2.2. Factorization Method
 - 2.3. Numerical Stability
 - 2.4. Gauss Factorization Algorithm
 - 2.5. Computation Cost
 - 2.6. Crout Factorization
 - 2.7. Cholesky Factorization
 - 2.8. Computational Cost
 - 2.9. Skyline of a Matrix
- 3. Iterative methods
 - 3.1. Introduction
 - 3.2. Regular Decomposition
 - 3.3. Jacobi Method
 - 3.4. Gauss-Seidel Method
 - 3.5. Relaxation Method
 - 3.6. Double Regular Decomposition
 - 3.7. Symmetric Relaxation Method (S.S.O.R.)
 - 3.8. Comparison of the Methods
 - 3.9. Condensed Storage
- 4. The conjugate gradient method
 - 4.1. Introduction
 - 4.2. A Minimization Problem
 - 4.3. A First Formulation
 - 4.4. Computational Cost
 - 4.5. Convergence Rate
 - 4.6. Preconditioning the Iterations
- 5. Conjugate gradient method: general case
 - 5.1. Introduction
 - 5.2. Orthomin Algorithm
 - 5.3. Biconjugate Gradient Algorithm
 - 5.4. A Different Approach : GMRES and QMR
 - 5.5. Preconditioning Nonsymmetric Matrices
 - 5.6. An Awkward Question
- 6. Domain decomposition methods
 - 6.1. Introduction
 - 6.2. Domain Decomposition
 - 6.3. Generalization
- 7. Conclusion

Numerical Integration**426**M.V. Noskov, *Department of Applied Mathematics, Krasnoyarsk State Technical University, Russia*

- 1. Statements of Problems
 - 1.1. Algebraically Accurate Formulae
 - 1.2. Statements of Problems of Numerical Integration in Terms of Functional Analysis
 - 1.3. Multi-dimensional Case
- 2. Quadrature Formulae
 - 2.1. Interpolatory Quadrature Formulae

- 2.2. Newton-Cotes Formulae
- 2.3. Error Analysis for Quadrature Formulae
- 2.4. Compound Quadrature Formulae
- 2.5. Quadrature Formulae of Gaussian type
- 2.6. Generalization of Quadrature Formulae of the Highest Algebraic Accuracy
- 2.7. Quadrature Formulae of the Highest Trigonometric Accuracy
- 2.8. Chebyshev Quadrature Formulae
- 3. Cubature Formulae
- 4. Conclusion

Numerical Methods for Ordinary Differential Equations and Dynamic Systems **447**
E.A. Novikov, Institute of Computational Modeling, Russian Academy of Sciences, Krasnoyarsk, Russia

- 1. Introduction
- 2. Dynamic Systems
- 3. Analytic Methods
- 4. One-step Methods
- 5. Stiff Systems
- 6. Linear Multistep Methods
- 7. Error Estimation
- 8. Delay Differential Equations

Solution of Electromagnetism Theory Problems

153

V.V. Denisenko, *Institute of Computational Modelling SB RAS, Krasnoyarsk, Russia*

- 1. Introduction
- 2. Two-dimensional electrostatics problems
- 3. Three-dimensional electrostatics problems
- 4. Two-dimensional magnetostatics problems
- 5. Three-dimensional magnetostatics problems
- 6. Electrical conductivity problems
- 7. Solutions harmonic with respect to time
- 8. Nonstationary solutions
- 9. Conclusions

Computational Methods in Elasticity

184

Michel SALAUN, *Département de Mathématiques et Informatique, ENSICA, Toulouse, France*

- 1. Introduction
- 2. Basic aspects of continuum mechanics
 - 2.1. Strain Tensor
 - 2.2. Linearized Strain Tensor and Small Displacements Hypothesis
 - 2.3. Stress Tensor
 - 2.4. Generalized Hooke's Law
- 3. The three-dimensional linearized elasticity
 - 3.1. Variational Formulation
 - 3.2. Equilibrium Equation
- 4. The three-dimensional elastodynamics problem
 - 4.1. Theoretical Framework
 - 4.2. Characterization of the Eigenvalues
 - 4.3. Modal Analysis
 - 4.4. Step-by-step Methods of Integration
 - 4.4.1. General Principles
 - 4.4.2. Convergence of Numerical Schemes
 - 4.4.3. Examples of Numerical Schemes
- 5. A particular case of structures: plates
 - 5.1. Introduction
 - 5.2. Notation
 - 5.3. The Kirchhoff-Love Model for Plates
 - 5.3.1. Kirchhoff-Love Hypotheses
 - 5.3.2. Kirchhoff-Love Displacement Fields
 - 5.3.3. Kirchhoff-Love Hypotheses and Hooke's Law
 - 5.3.4. Kirchhoff-Love Plate Model
 - 5.3.5. Equilibrated Plates
 - 5.4. The Mindlin- Naghdi-Reissner Model for Plates
 - 5.4.1. Mindlin-Naghdi-Reissner Hypotheses
 - 5.4.2. Mindlin-Naghdi-Reissner Plate Model
 - 5.4.3. Equilibrated Plates
 - 5.5. Finite Elements for Bending Plates

- 5.5.1. General Aspects
- 5.5.2. Examples
- 6. Conclusion

Computational Methods for Compressible Flow Problems

223

Rémi Abgrall, *Université Bordeaux I, Talence Cedex, France*

- 1. Introduction
- 2. A Brief Description of the Solutions
 - 2.1. On the Notion of Solutions
 - 2.2. Hyperbolicity: Characteristic Form of the Equations
- 3. Numerical Schemes for 1-D Problems
 - 3.1. The Principle of Conservative Schemes
 - 3.2. The Godunov Scheme
 - 3.3. The Roe Scheme
 - 3.4. Kinetic Schemes
 - 3.5. High Order Accuracy Scheme
- 4. Schemes for Multidimensional Problems
- 5. Numerical Examples
 - 5.1. A One-dimensional Example: The Sod Problem
 - 5.2. A Two-dimensional Example
- 6. Conclusions

Methods of Nonlinear Kinetics

259

A.N. Gorban, *Institute of Computational Modeling, Siberian Branch of Russian Academy of Sciences, Krasnoyarsk, Russia*

I.V. Karlin, *Institute of Energy Technology, ETH-Zentrum, Zürich, Switzerland*

- 1. The Boltzmann equation
 - 1.1. The Equation
 - 1.2. The Basic Properties of the Boltzmann Equation
 - 1.3. Linearized Collision Integral
- 2. Phenomenology and Quasi-chemical representation of the Boltzmann equation
- 3. Kinetic models
- 4. Methods of reduced description
 - 4.1. The Hilbert Method
 - 4.2. The Chapman-Enskog Method
 - 4.3. The Grad Moment Method
 - 4.4. Special Approximations
 - 4.5. The Method of Invariant Manifold
 - 4.5.1. Thermodynamic Projector
 - 4.5.2. Iterations for the Invariance Condition
 - 4.6. Quasi-equilibrium Approximations
- 5. Discrete velocity models
- 6. Direct simulation
- 7. Lattice Gas and Lattice Boltzmann models
- 8. Other kinetic equations
 - 8.1. The Enskog Equation for Hard Spheres
 - 8.2. The Vlasov Equation
 - 8.3. The Smoluchowski Equation

Methods for Magnetosphere and Near-Space Problems

280

N. V. Erkaev, *Institute of Computational Modeling, Russian Academy of Sciences, Krasnoyarsk, Russia*

H. K. Biernat, *Space Research Institute, Austrian Academy of Sciences, Graz, Austria*

C. J. Farrugia,

Institute for the Study of Earth, Oceans and Space, University of New Hampshire, Durham, NH, USA

1. Introduction
2. MHD model of solar wind flow around the magnetosphere
3. Mathematical statement of the flow problem: Basic equations
4. Thermal anisotropy of the magnetosheath plasma
5. Reconnection problem
6. Conclusions

Numerical Simulation of Climate Problems

298

V.N. Krupchatnikoff, *Institute of Computational Mathematics and Mathematical Geophysics, Siberian Branch of Russian Academy of Sciences, Russia*

V.I. Kuzin, *Institute of Computational Mathematics and Mathematical Geophysics, Siberian Branch of Russian Academy of Sciences, Russia*

1. Introduction
2. Climate, Climatic Variability and Climate Changes
3. Atmosphere & Ocean Circulation Models
 - 3.1. Atmospheric General Circulation Models (AGCM)
 - 3.2. Ocean General Circulation Models (OGCM)
4. Numerical Modeling of Climatic Variability and Climate Changes
 - 4.1. Inter-Annual Climate Variability Modeling and Predictability
 - 4.2. Climate Decadal-to-Centennial Variability Modeling
 - 4.3. Anthropogenic Climate Change
 - 4.4. Regional Climate Modeling
5. Conclusion

Numerical Simulation of Biosphere Dynamics

321

S.I. Bartsev, *Institute of biophysics SB RAS, Krasnoyarsk, Russia*

R.G. Khlebopros, *Institute of biophysics SB RAS, Krasnoyarsk, Russia*

1. Introduction
2. Models of Global Dynamics by Club of Rome
3. The Problem of the Earth's Biosphere Stability
4. Canadian Climate Change Model
5. Global Models of Biosphere Dynamics
6. Problems of Biosphere Dynamics Prediction
7. Numerical Simulation and Experimental Models of the Biosphere
8. Is Uncertainty of Global Models Principal?
9. Resume

Numerical Methods for Weather Forecasting Problems

335

A.A. Fomenko, *Institute of Computational Mathematics and Mathematical Geophysics, Siberian Branch of Russian Academy of Sciences, Russia.*

1. Introduction
2. Data assimilation system.
3. Numerical data analysis and initialization.
4. Mathematical Models for Numerical Weather Prediction
 - 4.1. Filtered Models
 - 4.2. Global Models
 - 4.3. Regional and Mesoscale Models
5. Numerical Methods in Weather Forecast
 - 5.1. Spectral and Finite-element Methods

- 5.2. Finite-difference Method (Grid Method)
- 6. Parameterization schemes.
 - 6.1. Atmospheric Turbulence Parameterization
 - 6.2. Cloudiness and Precipitation Parameterization
 - 6.3. Radiation Transfer Parameterization
 - 6.4. Surface Processes Parameterization
 - 6.5. Orographic Effects Parameterization
- 7. The use of numerical weather forecasting products.
- 8. Resume.
