

CONTENTS

INORGANIC AND BIO-INORGANIC CHEMISTRY

Inorganic and Bio-Inorganic Chemistry - Volume 1

No. of Pages: 440

ISBN: 978-1-84826-214-0 (eBook)

ISBN: 978-1-84826-664-3 (Print Volume)

Inorganic and Bio-Inorganic Chemistry - Volume 2

No. of Pages: 502

ISBN: 978-1-84826-215-7 (eBook)

ISBN: 978-1-84826-665-0 (Print Volume)

CONTENTS

VOLUME I

Inorganic And Bioinorganic Chemistry **1**Ivano Bertini, *Magnetic Resonance Center (CERM), University of Florence, Italy**Department of Chemistry, University of Florence, Italy*Mirko Mori, *Magnetic Resonance Center (CERM), University of Florence, Italy*

1. Introduction
2. Chemical Elements and their Discovery
 - 2.1. Determining the Name of Chemical Elements
 - 2.2. Abundance of Elements on Earth
 - 2.3. Periodic Table
 - 2.4. Periodic Trends of Groups and Periods
3. The Inorganic Chemical Industry
 - 3.1. Sources of Inorganic Raw Materials
 - 3.2. The Beginnings
 - 3.3. Sulfuric Acid
 - 3.4. Nitrogen Compounds
 - 3.5. Phosphoric Acid
 - 3.6. Chlor-alkali Compounds
 - 3.7. Oxygen Compounds
4. Bioinorganic Chemistry
5. Conclusions

From Simple to Complex Compounds **40**Luigi Fabbrizzi, *Universita di Pavia, Pavia Italy*

1. Introduction
2. Metal amine complexes: bonding and geometry
3. Metal complexes of multidentate ligands: deviations from regular geometries
4. Linkage isomerism: the nitro–nitrito interconversion
5. Multidentate ligands with more sophisticated shapes: rings and cages
6. The metal template synthesis of macrocycles
7. The metal template synthesis of catenanes
8. Self-assembling driven by metal centres: helicates and grids
9. Coordination assemblies made on PdII building blocks
10. The coordination chemistry of anions
11. Conclusion

Chemistry of Metals **88**Stefano Delfino, *Universita degli Studi di Genova, Italy*Adriana Saccone, *Universita degli Studi di Genova, Italy*

1. Introduction
2. Structural and physical properties of metals
3. General aspects of extracting metallurgy
 - 3.1. Historical Background
 - 3.2. Extracting Metallurgy
4. Alloying behavior
 - 4.1. Introduction
 - 4.2. Phase Diagrams
 - 4.3. Real Phase Diagrams

- 4.4. Qualitative Prediction of Alloying Behavior
5. Intermetallic phases
 - 5.1. Introduction
 - 5.2. Identification of Intermetallic Phases
 - 5.3. Terminal (or Primary) Solid Solutions
 - 5.3.1. Superlattices
 - 5.3.2. Metastable Solid Solutions
 - 5.4. Intermetallic Compounds
 - 5.5. Synthesis of Intermetallic Phases
 - 5.6. Uses of Intermetallic Phases

Inorganic Synthesis

131

Guido Pampaloni, *University of Pisa, Italy*

1. Introduction
2. Coordination compounds: generality
 - 2.1. Werner Complexes
 - 2.2. Organometallic Complexes
 - 2.2.1. Metal Alkyls and Aryls
 - 2.2.2. Metal Carbenes
 - 2.2.3. Metal Alkene and Alkyne Complexes
 - 2.2.4. Metal Carbonyls
 - 2.2.5. Binary Cyclopentadienyl Derivatives
 - 2.2.6. Metal arene derivatives
3. Coordination compounds: reactivity
 - 3.1. Substitution Reactions
 - 3.2. Redox Reactions
 - 3.3. Oxidative Addition / Reductive Elimination
 - 3.4. Insertion Reactions

Radical Reactions and Metal Complexes in Aqueous Solutions

168

Alexandra Masarwa, *Department of Chemistry, Ben-Gurion University of the Negev, Beer-Sheva, Israel*
 Dan Meyerstein, *Department of Chemistry, Ben-Gurion University of the Negev, Beer-Sheva, Israel*
Department of Biological Chemistry, the College of Judea and Samaria, Ariel, Israel

1. Radicals and Their Role in Chemical Processes with Emphasis on Biological Systems
2. The Chemistry of Radicals
 - 2.1. Initiation, Propagation, Termination
 - 2.2. Formation of Radicals
 - 2.3. Redox Properties of Radicals
 - 2.4. Detection of Radicals
3. Important Types of Radicals
 - 3.1. Inorganic Radicals
 - 3.1.1. Hydroxyl Radicals ($\cdot\text{OH}$)
 - 3.1.2. Superoxide Radicals ($\text{O}_2^{\cdot-}$)
 - 3.1.3. Dihalogen Radicals ($\text{X}_2^{\cdot-}$)
 - 3.1.4. Sulfur Oxide Radicals ($\text{SO}_x^{\cdot-}$)
 - 3.2. Organic Radicals
 - 3.2.1. Aliphatic Carbon Centered Radicals ($\cdot\text{R}$)
 - 3.2.2. Aliphatic Peroxyl Radicals ($\cdot\text{OOR}$)
 - 3.2.3. Thyl Radicals (RS^{\cdot})
 - 3.3. Stable Radicals
 - 3.3.1. Dioxygen (O_2)
 - 3.3.2. Nitrogen Oxide ($\cdot\text{NO}$), Nitrogen Dioxide (NO_2^{\cdot})
 - 3.3.3. Organic Radicals, e.g. Antioxidants, Nitroxides, Methylviologen, DPPH
4. The Role of Transition Metal Complexes in Radical Chemistry

- 4.1. Reactions with Aliphatic and Aliphatic Peroxyl Radicals
 - 4.1.1. Reactions with Aliphatic Radicals
 - 4.1.1.1. Redox Reactions of Radicals with Transition Metal Complexes
 - 4.1.1.2. Formation of Transition Metal Complexes with Metal-carbon σ -bonds
 - 4.1.2. Reactions with Aliphatic Peroxyl Radicals
- 4.2. Fenton-like Reactions
- 4.3. Transition Metal Complexes with Ligand Radicals
5. Concluding Remarks

Magnetic and Optical Properties**199**

Lorenzo Sorace, *UdR INSTM and Department of Chemistry, University of Florence, Italy*
 Dante Gatteschi, *UdR INSTM and Department of Chemistry, University of Florence, Italy*

1. Introduction
2. Electronic structure of transition metal ions
 - 2.1. Free Ion
 - 2.2. Coordination Complexes
3. The Ligand Field Approach
4. Principles of optical spectroscopy
5. Rationalization of Spectra
 - 5.1. Optical Properties of Polynuclear Species
6. Spin Hamiltonian approach
7. Magnetic properties
 - 7.1. First Transition Row
 - 7.2. Second-third Transition Row
 - 7.3. Magnetism of Rare Earth Ions
8. Magnetism in polynuclear complexes
9. Highlights of recent research breakthroughs

Inorganometallic Chemistry**239**

Bogdan Marciniec, *Adam Mickiewicz University, Grunwaldzka, Poznan, Poland*
 Piotr Pawluc, *Adam Mickiewicz University, Grunwaldzka, Poznan, Poland*
 Cezary Pietraszuk, *Adam Mickiewicz University, Grunwaldzka, Poznan, Poland*

1. Definition of Inorganometallic vs. Organometallic Chemistry
2. Inorganometallic Compounds Containing Transition Metal (TM) Main Group Metal (E) Bond
 Synthesis, Structure and Reactivity
 - 2.1. Inorganometallic Complexes of TM with Group 13 Elements
 - 2.1.1. Inorganometallic Complexes of TM with Boron
 - 2.1.2. Inorganometallic Complexes of TM with Heavier Elements of Group 13
 - 2.2. Inorganometallic Complexes of TM with Group 14 Elements
 - 2.3. Inorganometallic Complexes of TM with Group 15 Elements
 - 2.4. Inorganometallic Complexes of TM with Group 16 Elements
3. Inorganometallic Clusters
4. Inorganometallics and Catalysis
5. Special Applications of TM-E Compounds
 - 5.1. Inorganometallics as Precursors of Optoelectronic Materials
 - 5.2. Inorganometallic Ceramics

High Temperature Materials and Solid State Chemistry**292**

C. Bellitto, *CNR-Istituto di Struttura della Materia, Area della Ricerca di Roma, Via Salaria km.29.3, I-00016 Monterotondo Staz. (Roma) Italy*
 E.M. Bauer, *CNR-Istituto di Struttura della Materia, Area della Ricerca di Roma, Via Salaria km.29.3, I-00016 Monterotondo Staz. (Roma) Italy*

G. Righini, *CNR-Istituto di Struttura della Materia, Area della Ricerca di Roma, Via Salaria km.29.3, I-00016 Monterotondo Staz. (Roma) Italy*

1. Introduction
2. The Importance of Solids
 - 2.1. Crystalline Solids
3. Chemical Classification of Solids
 - 3.1. Covalent Solids
 - 3.2. Ionic Solids
 - 3.3. Metallic Solids
 - 3.4. Molecule-based Solids
4. Bonding in Solids
 - 4.1. Introduction
 - 4.2. Band Theory
 - 4.3. Metals, Semiconductors and Insulators
 - 4.3.1. Electrical Behavior of Metal Depending on Temperature
 - 4.4. Optical Properties of Solids
 - 4.5. Superconductors
5. Properties and Technological Applications
 - 5.1. Defects in Solids
6. Selected Classes of Inorganic Solids
 - 6.1. Hybrid Organic-Inorganic Layered Perovskite Halides
 - 6.2. Inorganic Materials for Lithium-ion Batteries
 - 6.3. Inorganic and Molecular Superconductors
 - 6.4. Multifunctional Organic-inorganic Hybrid Solids
7. High Temperature Materials
 - 7.1. Method of Synthesis
8. Conclusions

Inorganic Biochemistry

339

Ivano Bertini, *University of Florence, Italy*
 Marco Salomone-Stagni, *University of Florence, Italy*
 Paola Turano, *University of Florence, Italy*

1. Introduction
2. Historical background
3. The philosophy of model chemistry
4. The role of metal cofactors
 - 4.1. The Metals of Biology
 - 4.1.1. Iron
 - 4.1.2. Zinc
 - 4.1.3. Copper
 - 4.1.4. Molybdenum and Tungsten
 - 4.1.5. Nickel
 - 4.1.6. Vanadium
 - 4.1.7. Alkali and Alkaline Earth Cations
5. The role of special metal cofactors
 - 5.1. Tetrapyrroles
 - 5.1.1. Hemes
 - 5.1.2. Chlorophylls
 - 5.1.3. Corrins
 - 5.1.4. Coenzyme F430
 - 5.2. Metalloclusters
 - 5.2.1. Iron-sulfur Clusters
 - 5.2.2. Complex Metalloclusters
 - 5.2.2.1. Metalloclusters in Nitrogenases
 - 5.2.2.2. Metalloclusters in Hydrogenases

- 5.2.2.3. Metalloclusters in Nitrous Oxide Reductase
- 5.2.2.4. The Metallocluster of the Oxygen-evolving Center of Photosystem II
- 5.2.2.5. Metalloclusters in Carbon Monoxide Dehydrogenase/Acetyl Coenzyme A Synthase

Index **379**

About EOLSS **385**

VOLUME II

Inorganic Reaction Mechanisms **1**

Raffaello Romeo, *University of Messina, Italy*

1. Introduction
 - 1.1. Historical Background
2. Planning a Mechanistic Study
 - 2.1. Kinetic Techniques
 - 2.2. Probing a Reaction Mechanism
3. A Classification of Inorganic Reactions
4. Ligand Substitution Reactions
 - 4.1. Langford -Gray Classification of Mechanisms
5. Ligand Substitution at Square-planar Complexes
 - 5.1. The Kinetics and Mechanism of Substitution
 - 5.2. The Stereochemistry of the Substitution
 - 5.3. Nucleophilicity Scale for Platinum (II)
 - 5.4. The *trans*-effect
 - 5.5. The Dissociative Mechanism for Substitution
6. Ligand Substitution at Octahedral Complexes
 - 6.1. Ligand Replacement on Hexaaqua Ions
 - 6.2. Complex Formation. The Eigen-Wilkins Mechanism
 - 6.3. Solvolysis Reactions on Co(III) Amine Complexes
 - 6.4. Stereochemistry of Octahedral Substitution
 - 6.5. Base Hydrolysis and the SN1CB Mechanism on Co(III) Amine Complexes
7. Stereochemical Nonrigidity of Ligands
 - 7.1. Geometrical Isomerization of Square-Planar Complexes
8. Redox Reactions
 - 8.1. Inner-sphere Mechanism
 - 8.2. Outer-sphere Reactions

Homogeneous and Heterogeneous Catalysis **50**

Erica Farnetti, *Universita di Trieste, Trieste, Italy*

Roberta Di Monte, *Universita di Trieste, Trieste, Italy*

Jan Kaspar, *Universita di Trieste, Trieste, Italy*

1. Introduction
 - 1.1. Catalyzed vs Non-Catalyzed Reaction
 - 1.2. Homogeneous vs. Heterogenized and Heterogeneous Catalysts
 - 1.3. Catalysis for Sustainability of Chemical Processes
2. Homogeneous Catalysis
 - 2.1. General Concepts
 - 2.2. Current Applications
 - 2.2.1. Hydrogenation
 - 2.2.2. Hydroformylation

- 2.2.3. Carbonylation
- 2.2.4. Oxidation
- 2.2.5. Metathesis
- 2.2.6. Homo and Copolymerization
- 2.2.7. Oligomerization
- 3. Heterogeneous Catalysis
 - 3.1. Synthesis Methodologies and Catalyst Formulation
 - 3.2. Metal Support Interactions
 - 3.3. Acid-base Catalysts
 - 3.4. Redox Catalysts
 - 3.5. Shape Selectivity
 - 3.6. Polyfunctional Catalysts
- 4. Heterogenized Catalysts

Clusters and Polynuclear Compounds

87

G. Longoni, *Dipartimento di Chimica Fisica ed Inorganica, Università di Bologna, Italy*
 S. Zacchini, *Dipartimento di Chimica Fisica ed Inorganica, Università di Bologna, Italy*

- 1. Introduction
- 2. Clusters of the p-block Elements
 - 2.1. Clusters of p-block Elements in a Ligand Shell: Boron Hydrides
 - 2.2. Clusters in a Ligand Shell of the Heavier Elements of Group 13 and 14
 - 2.3. Bare Clusters of p-block Elements
- 3. Clusters of d-block Elements
 - 3.1. Low-valent Metal Clusters
 - 3.1.1. Metal Carbonyl Clusters
 - 3.1.1.1. Homometallic Metal Carbonyl Clusters
 - 3.1.1.2. Metal Carbonyl Clusters Containing Interstitial Main Group Heteroatoms
 - 3.1.1.3. Mixed-metal Carbonyl Clusters
 - 3.1.1.4. Phosphine-substituted Carbonyl Metal Clusters
 - 3.1.1.5. Bonding in Metal Carbonyl Clusters
 - 3.1.1.6. Properties and Applications of Metal Carbonyl Clusters
 - 3.1.2. Low-valent Metal Clusters Stabilized by Other σ - π Ligands
 - 3.1.3. Clusters of Late Transition Metals Stabilized by Phosphines: The Thin Border Between Clusters and Colloids
 - 3.2. High-valent Metal Clusters
 - 3.2.1. Halide Clusters of Early Transition Metals
- 4. Polynuclear Compounds
 - 4.1. Polyoxometallates and Related Compounds
 - 4.2. Polynuclear Compounds of Transition and Post-transition Metals with Bridging and Polydentate Ligands

Structure and Bonding in Inorganic Chemistry

137

John S. Magyar, *Beckman Institute, California Institute of Technology, Pasadena, California, USA*
 Harry B. Gray, *Beckman Institute, California Institute of Technology, Pasadena, California, USA*

- 1. Introduction
- 2. Ligand-field Theory for Octahedral Complexes
 - 2.1. d-d Transitions
 - 2.2. Factors that influence the value of Δ_o
- 3. Ligand-field Theory for Square Planar Complexes
- 4. Ligand-field Theory for Tetrahedral Complexes
- 5. Charge-Transfer Absorption Bands
- 6. Stabilities of Complexes
- 7. Current Work and Further Reading

Synthesis and Spectroscopy of Transition Metal Complexes**150**Antonio Bianchi, *University of Florence, Italy*Alessandro Bencini, *University of Florence, Italy*

1. Introduction
2. Synthesis of Transition Metal Complexes
 - 2.1. Synthesis by Substitution Reactions
 - 2.2. Synthesis by Oxidation/Reduction Reactions
 - 2.3. Synthesis by Addition Reactions
 - 2.4. Synthesis by Dissociation Reactions
 - 2.5. Synthesis by Reaction of Coordinated Ligands
 - 2.6. Synthesis by Self-assembly
 - 2.7. Synthesis by Second Sphere Coordination
3. Spectroscopy of Transition Metal Complexes
 - 3.1. Electronic Absorption Spectroscopy
 - 3.1.1. Intensity of the Electronic Transitions
 - 3.1.2. Polarized Electronic Absorption Spectroscopy
 - 3.1.3. Charge Transfer Transitions
 - 3.1.4. Selected Examples of d-d Electronic Absorption Spectra
 - 3.1.4.1. Electronic Absorption Spectra of Complexes of d^1 , d^4 , d^6 , and d^9 ions
 - 3.1.4.2. Electronic Absorption Spectra of d^2 , d^3 , d^7 , and d^8 ions
 - 3.1.4.3. Electronic Absorption Spectra of Complexes of d^5 ions
 - 3.2. Electron Paramagnetic Resonance Spectroscopy (EPR,ESR)
 - 3.2.1. Basic Principles
 - 3.2.1.1. CW-EPR
 - 3.2.1.2. Multiple Resonance Spectra
 - 3.2.1.3. Pulsed EPR
 - 3.2.2. Spin-Hamiltonian and the Interpretation of the Spectra
 - 3.2.2.1. Zeeman Interaction
 - 3.2.2.2. Electron-Electron (Fine) Interaction
 - 3.2.2.3. Electron-Nucleus (Hyperfine) Interaction
 - 3.2.3. Selected Examples of EPR Spectra
 - 3.3. Mössbauer Spectroscopy (MB)
 - 3.3.1. Basic Principles and Applications

Nanosystems**256**Rinaldo Psaro, *CNR Istituto di Scienze e Tecnologie Molecolari(ISTM), via C. Golgi, 19, Milano Italy*Matteo Guidotti, *Istituto di Scienze e Tecnologie Molecolari, via C. Golgi, 19, Milano Italy*Maila Sgobba, *Centro CIMAINA and Dip. Chimica Inorganica, Metallorganica e Analitica, via G.Venezian, 21 Milano, Italy*

1. Introduction
 - 1.1. Distinctive Features of Nanosystems
 - 1.2. General Aspects of Synthesis
 - 1.2.1. Top-down Approach
 - 1.2.2. Bottom-up Approach
2. Zero-dimensional nanosystems
 - 2.1. Transition Metal Nanoparticles
 - 2.2. Supported Metal Nanoparticles
 - 2.3. Magnetic Nanoparticles
 - 2.4. Nanopowders
3. One-dimensional nanosystems
 - 3.1. Nanowires and Nanorods
 - 3.2. Nanotubes
4. Two-dimensional nanosystems
 - 4.1. Two-dimensional Nanocrystals
 - 4.2. Nanofilms

- 4.3. Nanomembranes
- 4.4. Two-dimensional Arrays of 1-D and 0-D Systems
- 5. Three-dimensional nanosystems
 - 5.1. Three-dimensional Nanocrystals
 - 5.2. Three-dimensional Superstructures
 - 5.3. Nanoporous Materials
- 6. Inorganic-organic hybrid nanosystems
- 7. Nanosystems in biochemistry

Computational Inorganic Chemistry

308

Carlo Mealli, *ICCOM-CNR, Florence, Italy*

- 1. General Considerations
 - 1.1. The Fundamental Relation between Structure and Energy
- 2. Basic Computational Tools
 - 2.1. The Molecular Mechanics Approach
 - 2.1.1. Applications of the MM Method and Problems with Transition Metal Complexes
 - 2.2. Foundations of the Quantum Mechanical Approach
 - 2.2.1. The Hartree-Fock Method
 - 2.2.2. Basis Sets
 - 2.2.3. Methods of the Electron Correlation
 - 2.3. Density Functional Theory (DFT)
 - 2.4. QM Approach to Inorganic and Transition Metal Compounds
 - 2.5. QM/MM Methods
 - 2.6. Most Popular Software Packages
- 3. Goals and Strategies of Computational Methods
 - 3.1. Selection of the Starting Model
 - 3.2. SCF and Structure Optimization Procedures
 - 3.3. Calculation of the Frequencies
 - 3.4. Finding Transition Structures
- 4. Derivation of Molecular Properties
 - 4.1. Chemical Bonding
 - 4.1.1. Mulliken Population Analysis
 - 4.1.2. Other Population Analysis Schemes
 - 4.2. Electrostatic Charges
 - 4.3. Electric Multipole Moments
 - 4.4. Electron Affinity and Ionization Potential
 - 4.5. Non Linear Optical Properties (NLO)
 - 4.6. ESR Hyperfine Coupling Constants
 - 4.7. NMR spectral Properties
 - 4.8. Magnetic Properties
- 5. Types of Chemical Information from MO Calculations
 - 5.1. Characterization of New Chemical Species
 - 5.2. Characterization of Species in Solution
 - 5.3. Analysis of Fluxionality
 - 5.4. Chemical Reactivity
- 6. Architectures of Molecular Orbitals
 - 6.1. The Role of Symmetry
 - 6.2. Concepts of Perturbation Theory
 - 6.2.1. Correlation or Walsh Diagrams
 - 6.2.2. Interaction Diagrams and Electron Counting Principles
 - 6.2.3. Derivation of Fragment Molecular Orbitals and *Isolobal Analogy* Concept
 - 6.2.4. Electron Counting and Metal-Metal Bonding in Transition Metal Clusters
 - 6.3. Bonding between Metals and Organic Polyenes
 - 6.4. MO Undepinnings of Oxidative Addition and Reductive Elimination Processes
- 7. Energy Partitioning Analysis and Bond Dissociation Energy
- 8. Molecular Dynamics

- 8.1. The Car-Parrinello Method
- 9. Solids and Surfaces
 - 9.1. Cluster Calculations
 - 9.2. Band Structures
 - 9.3. Surfaces and Chemisorption
 - 9.4. Computer Programs for Extended Structures
- 10. Analysis of the Electron Density (QTAIM Methods)

Energy and Inorganic Chemistry**365**Carlos Alberto Bignozzi, *University of Ferrara, Ferrara, Italy*Roberto Argazzi, *University of Ferrara, Ferrara, Italy*Stefano Caramori, *University of Ferrara, Ferrara, Italy*

- 1. Introduction
- 2. General background
 - 2.1. Electronic Excited States
 - 2.1.1. Classification of Excited States in Coordination Complexes
 - 2.2. Electron Transfer Processes
 - 2.3. Energy Transfer Processes
 - 2.4. Semiconductor Materials
- 3. Molecular level energy conversion devices
 - 3.1. Functions From Natural Photosynthesis
 - 3.1.1. Photoinduced Charge Separation
 - 3.1.2. Antenna Effect
 - 3.2. Supramolecular Systems as Photochemical Molecular Devices
 - 3.3. Multielectron Redox Catalysts
- 4. Inorganic Photovoltaics
 - 4.1. Silicon Solar Cells
 - 4.2. Thin Film Solar Cells
 - 4.3. Multijunction and Tandem Cells
 - 4.4. Solar Concentrators
- 5. Photoelectrochemical solar cells
 - 5.1. Sensitization of Wide Band-gap Semiconductors
 - 5.2. Solar Cell Efficiency
 - 5.3. Inorganic Molecular Sensitizers
 - 5.4. Inorganic Supramolecular Sensitizers
- 6. Photoelectrochemical hydrogen production
 - 6.1. Photo assisted Electrolysis
 - 6.2. Tandem Solar Cells
 - 6.3. Conclusion
