

# CONTENTS

## TELECOMMUNICATION SYSTEMS AND TECHNOLOGIES

### **Telecommunication Systems and Technologies - Volume 1**

**No. of Pages:** 406

**ISBN:** 978-1-84826-000-9 (eBook)

**ISBN:** 978-1-84826-450-2 (Print Volume)

### **Telecommunication Systems and Technologies - Volume 2**

**No. of Pages:** 412

**ISBN:** 978-1-84826-001-6 (eBook)

**ISBN:** 978-1-84826-451-9 (Print Volume)

Preface

xiv

## VOLUME I

<b>Telecommunication Systems and Technologies</b>	<b>1</b>
Paolo Bellavista, <i>University of Bologna, Italy</i>	
Roberto Saracco, <i>Telecom Italia Lab, Italy</i>	

1. Telecommunications: Connecting the World
  - 1.1. The Wireless and the Internet Discontinuities: 10 Years to Change Telecommunications
2. 150 Years in a Blink of an Eye: a Very Short History of Telecommunications
  - 2.1. The Birth of the Idea of Voice Telecommunications
  - 2.2. The Conquest of Distance
  - 2.3. The Conquest of Capacity
  - 2.4. The Conquest of Intelligence
  - 2.5. From Analog to Digital
3. What is between Two Telephones?
4. A Rapid Overview of Mechanisms, Technologies, and Models for Telecommunications Systems and Services
5. The Wireless World
  - 5.1. A Simple Taxonomy of Wireless Communication Systems
6. The Convergence of the Internet and Telecommunication Networks
7. The Future of Telecommunications

<b>Fundamentals of Communication Systems</b>	<b>36</b>
Przemyslaw Dymarski, <i>Warsaw University of Technology, Poland</i>	
Slawomir Kula, <i>Warsaw University of Technology, Poland</i>	

1. Introduction
2. Sources of Information and Source Coding
3. Communication Channels, Modulation, Channel Coding and Synchronization
  - 3.1. Channels and Introduced Distortions
  - 3.2. Analog and Digital Modulations
  - 3.3. Reception and channel coding
  - 3.4. Synchronization
4. Performance Evaluation
  - 4.1. Criteria for Comparing Telecommunication Systems
  - 4.2. Channel Capacity and its Impact on System Performance
5. Concluding Remarks

<b>Fundamentals of Telecommunications</b>	<b>67</b>
Khaled M. Fouad Elsayed, <i>Cairo University, Giza, Egypt</i>	

1. Introduction
2. Types of Telecommunication Networks Procedure
  - 2.1. Circuit-Switched Networks
  - 2.2. Packet-Switched Networks
    - 2.2.1. Virtual-Circuit Packet Switching
3. Multiplexing Techniques
  - 3.1. Frequency-Division Multiplexing
  - 3.2. Time-Division Multiplexing
  - 3.3. Statistical Multiplexing

4. Network Protocol Layering
  - 4.1. The OSI Model
    - 4.1.1. The Application Layer
    - 4.1.2. The Presentation Layer
    - 4.1.3. The Session Layer
    - 4.1.4. The Transport Layer
    - 4.1.5. The Network Layer
    - 4.1.6. The Data Link Layer
    - 4.1.7. The Physical Layer
5. Telephony and Internet-oriented Technologies
  - 5.1. Telephony/TDM
    - 5.1.1. Architecture of the Telephone Network
    - 5.1.2. Signaling in the Telephone Network
  - 5.2. The Internet and IP-based Networks
    - 5.2.1. The Internet Protocol Model
6. Future Outlook

### Models and Layered Protocol Organization

92

Joan Garcia Haro, *Polytechnic University of Cartagena, Spain*

Josemaria Maglosa-Sanahuja, *Polytechnic University of Cartagena, Spain*

Pablo Pavon-Marino, *Polytechnic University of Cartagena, Spain*

Javier Vales-Alonso, *Polytechnic University of Cartagena, Spain*

1. Introduction
  - 1.1. Brief History Overview
  - 1.2. Protocol Standardization
2. Protocol Structure
  - 2.1. Introduction
  - 2.2. Service Specification, Environment Assumptions and Protocol Vocabulary
  - 2.3. Message Format
    - 2.3.1. Headers and Trailers
  - 2.4. Procedure Rules
3. Protocol Validation
  - 3.1. Need for Protocol Validation and Formal Design Techniques
  - 3.2. Abstract Protocol Representation
    - 3.2.1. Finite State Machines
    - 3.2.2. Communicating Finite State Machines
    - 3.2.3. SDL
  - 3.3. Protocol Validation Tools
    - 3.3.1. Requirements
    - 3.3.2. How Protocols Can Be Validated?
  - 3.4. Good Practices for Protocol Design
4. Relevant Communication Protocols
  - 4.1. Error Control
    - 4.1.1. Parity Check
    - 4.1.2. Cyclic Redundancy Check
    - 4.1.3. Retransmission Strategies: Stop and Wait
    - 4.1.4. Retransmission Strategies: Go Back n
    - 4.1.5. FEC Systems
  - 4.2. Flow Control
  - 4.3. Medium Access Protocols
    - 4.3.1. Aloha Network
    - 4.3.2. CSMA/CD
    - 4.3.3. Token Ring
    - 4.3.4. Routing Protocols
      - 4.3.4.1. Shortest path routing

## 5. Concluding Remarks

**Analog and Digital Switching** **121**Wojciech Kabacinski, *Poznan University of Technology, Poland*

1. Introduction
2. Switching Node Architectures
3. Switching Technologies and Techniques
4. Switching Elements, Switches and Switching Fabrics
5. Digital Switching
6. ATM Switching
7. Conclusions

**Antenna System in Telecommunications** **153**Shaoqiu Xiao, *University of Electronic Science and Technology of China (UESTC), China*Yan Zhang, *Simula Research Laboratory, Norway*Honglin Hu, *Shanghai Research Center for Wireless Communications (SHRCWC), China*Bailong Xiao, *University of Electronic Science and Technology of China(UESTC), China*Bing-Zhong Wang, *University of Electronic Science and Technology of China(UESTC), China*

1. Introduction
2. Radiation Performance
3. Equivalent Circuit Model
4. The Basic Principle of the Radiation
5. Types of the Antennas and Their Basic Characteristics
6. Array Antennas and Phased Arrays
7. Adaptive and Smart Antennas
8. Propagation Channel Modelling
9. Conclusion

**Analog and Digital Transmission of Data** **187**Simon Haykin, *McMaster University, Canada*

1. Model of a Communication System
2. Analog Transmission
  - 2.1. Amplitude Modulation
  - 2.2. Angle Modulation
3. Pulse Modulation
  - 3.1. Sampling Theorem
  - 3.2. Pulse-Code Modulation
4. Data Transmission
  - 4.1. Baseband Data Transmission
  - 4.2. Passband Data Transmission
5. Spread-Spectrum Modulation
6. Multiplexing and Multiple Accessing
7. Conclusion

**Optical Fibers** **200**Atousa Vali Sichani, *University of Ottawa, Ontario, Canada*Hussein T. Mouftah, *University of Ottawa, Ontario, Canada*

1. Introduction
2. Nature of Light
3. Fiber Materials

4. Fiber Cables
5. Fiber Characteristics
6. Fiber Modes
  - 6.1. Modulation Schemes
  - 6.2. Multiplexing Techniques
  - 6.3. Point-to-point Transmission
  - 6.4. Structural Design
7. Fiber Connectors
8. Governing Standards
9. WDM Systems
10. Fiber Applications
11. Conclusion

### **Wireless Terrestrial Communications: Cellular Telephony**

218

Ariel Pashtan, *Aware Networks, Inc., Buffalo Grove, Illinois, USA*

1. Introduction
2. Mobile Networks
  - 2.1. Cell Sites
  - 2.2. Mobile RF Spectrum
  - 2.3. Subscriber Mobility
3. Mobile Terminals
4. Cellular Telephony Evolution: from 1G to 3G
  - 4.1. 1G Cellular Systems
  - 4.2. 2G Cellular Systems
  - 4.3. 2.5G Cellular Systems
  - 4.4. 3G Cellular systems
    - 4.4.1. EDGE
    - 4.4.2. W-CDMA
    - 4.4.3. cdma2000
5. Cellular Services
  - 5.1. Text Messaging
  - 5.2. Instant Messaging
  - 5.3. Multimedia Messaging
  - 5.4. E-mail
  - 5.5. Emergency Calls
  - 5.6. Wireless Internet
  - 5.7. Video Service and Mobile TV
  - 5.8. Push-to-talk
  - 5.9. IP-based Multimedia Communication
6. Cellular Quality-of-service
  - 6.1. Basic QoS Concepts
  - 6.2. UMTS QoS Architecture
7. Billing for Cellular Services
  - 7.1. Voice and Data Billing
  - 7.2. Content-based Billing
8. Conclusion

### **Wireless Terrestrial Communications: Non-Telephony-Oriented Technologies**

250

Marco Chiani, *University of Bologna, Bologna, Italy*

Andrea Giorgetti, *University of Bologna, Bologna, Italy*

1. Technical Challenges in Wireless Communications
  - 1.1. Data Rates, Mobility and Area Coverage
  - 1.2. Wireless Channel Characteristics
  - 1.3. Multiple Antenna Systems: Diversity, Interference Mitigation, MIMO

- 1.4. Modulation and Error Control Techniques
- 1.5. Multiple Access and Resource Allocation
2. Overview of Current Wireless Systems and Beyond
  - 2.1. Wireless Personal and Body Area Networks
  - 2.2. Wireless Local Area Networks
  - 2.3. Wireless Metropolitan Area Networks
  - 2.4. Wireless Sensor Networks
  - 2.5. Licensed vs. Unlicensed Spectrum: Spectrum Regulation and Cognitive Radio
3. Summary and Conclusive Remarks

### Communication Satellites - Technologies and Systems

274

Lillian L. Dai, *Massachusetts Institute of Technology, Cambridge, MA, USA*

Jihwan (Patrick) Choi, *Massachusetts Institute of Technology, Cambridge, MA, USA*

Vincent W.S Chan, *Massachusetts Institute of Technology, Cambridge, MA, USA*

1. Introduction
2. Satellite Fundamentals
  - 2.1. Space Segment
    - 2.1.1. Satellite Bus
    - 2.1.2. Communication Payload
  - 2.2. Satellite Orbits and Launch Vehicles
    - 2.2.1. Special Orbits
    - 2.2.2. Satellite Constellations
    - 2.2.3. Launch Vehicles
  - 2.3. Ground Segment
3. Evolution of Communication Satellite Applications and Systems
  - 3.1. Early Satellites
  - 3.2. First-generation Satellites: Fixed Services
  - 3.3. Second-generation Satellites: Broadcast and Mobile Services
  - 3.4. Third-generation Satellites: Personal Mobile Services
4. Communication Payload Technologies
  - 4.1. Link Design
    - 4.1.1. Free Space Loss and Antenna Gain
    - 4.1.2. Noise, Rain, Scintillation, and Shadowing Effects
    - 4.1.3. Link Margin
  - 4.2. Transparent and Regenerative Repeaters
  - 4.3. Power Amplifier
  - 4.4. Modulation and Error Correction Coding
  - 4.5. Frequency Reuse in Multibeam Satellites
  - 4.6. Multiple Access
  - 4.7. Switching / Routing
  - 4.8. Transport
  - 4.9. Topology Change and Handover in Networks of Satellites
5. Future Technology Trends and Impacts
  - 5.1. Space Communications Infrastructure
  - 5.2. Enabling Technologies and Architecture Concepts
    - 5.2.1. Optical Crosslink Technology
    - 5.2.2. Spacecraft Node Switching Architecture
    - 5.2.3. Shared Spaceborne Processing
    - 5.2.4. Interoperable Space and Terrestrial Networks
  - 5.3. Impacts of Communication Satellites
6. Conclusion

### Mobile and Wireless Positioning Technologies

318

Vasileios Zeimpekis, *Athens University of Economics and Business, Athens, Greece*

Panos E. Kourouthanasis, *Athens University of Economics and Business, Athens, Greece*  
 George M. Giaglis, *Athens University of Economics and Business, Athens, Greece*

1. Introduction
2. The Need for Positioning Determination
3. Radio Positioning Systems
4. Outdoor Positioning Technologies
  - 4.1. Self Positioning Techniques
    - 4.1.1. Global Positioning System (GPS)
    - 4.1.2. Assisted-GPS (A-GPS)
    - 4.1.3. Differential GPS (D-GPS)
    - 4.1.4. GLOSNAASS
    - 4.1.5. GALILEO
  - 4.2. Remote Positioning
    - 4.2.1. Cell Identification (Cell-ID)
    - 4.2.2. Direction or Angle of Arrival (DOA-AOA)
    - 4.2.3. Time Delay
    - 4.2.4. Enhanced Observed Time Difference (E-OTD)
    - 4.2.5. Location Pattern Matching (LMP)
5. Indoor Positioning Technologies
  - 5.1. Infrared-based Positioning
    - 5.1.1. Active Badge
    - 5.1.2. Locust Swarm
    - 5.1.3. IRREAL
  - 5.2. Ultrasound-based Positioning
    - 5.2.1. Active Bat
    - 5.2.2. CRICKET
  - 5.3. Radio-based positioning
    - 5.3.1. Wireless LAN (WLAN)
    - 5.3.2. Bluetooth
    - 5.3.3. RFID
  - 5.4. GPS-based positioning
    - 5.4.1. Indoor GPS
6. A Classification of Location-Based Services (LBS)
  - 6.1. Individual / Consumer Segment
    - 6.1.1. Emergency Services
    - 6.1.2. Navigation Services
    - 6.1.3. Information Services
    - 6.1.4. Advertising Services
  - 6.2. Business Segment
    - 6.2.1. Supply Chain and Logistics
      - 6.2.1.1. Fleet management and asset tracking
      - 6.2.1.2. Rolling inventory management
      - 6.2.1.3. Product replenishment
    - 6.2.2. Customer Relationship Management (CRM)
    - 6.2.3. Sales and Field Force Automation
7. Conclusion

**Index** **349**

**About EOLSS** **357**

## VOLUME II

**Telecommunication Network Management****1**Raouf Boutaba, *University of Waterloo, Canada*Xiao Jin, *University of Waterloo, Canada*

1. A Foundation for Network Management
2. Telecommunication Networks: Changes in Motion
3. Network and Service Management Architectures
  - 3.1. Simple Network Management Protocol (SNMP)
  - 3.2. Telecommunication Management Network (TMN)
  - 3.3. Telecommunication Information Networking Architecture (TINA)
  - 3.4. Web Based Enterprise Management (WBEM)
  - 3.5. Policy Based Management
  - 3.6. Directory Enabled Networking (DEN)
  - 3.7. Next Generation Operation Support Systems (NGOSS)
  - 3.8. Web Services Distributed Management (WSDM)
4. Advances in Network Management Research
  - 4.1. Management Distribution
  - 4.2. Java, CORBA and the Web: All about Technologies
  - 4.3. Integration, Integration, Integration
  - 4.4. Policy Based Management: Play by the Rules
  - 4.5. Mobile Agents: Things on the Move
  - 4.6. Active Networks: The Packet Makeover
  - 4.7. XML, Web Service and Peer-to-Peer: New Kids on the Block
  - 4.8. Ontology and Semantics: Reading beyond the Words
  - 4.9. SLA Based Management: What's in a Contract
  - 4.10. Managing Services
5. Management Automation: The Future of Network and Service Management
6. Conclusion

**Telecommunication Network Reliability****41**S. Rai, *Louisiana State University, Baton Rouge, USA*S. Soh, *Curtin University of Technology, Perth, Western Australia*

1. Introduction
  - 1.1. Measure
  - 1.2. Model and Assumptions
  - 1.3. Pathset and Cutset - Definition and Enumeration
2. Methods and Improving Computing Time
  - 2.1. Methods
  - 2.2. Improving Computing Time
    - 2.2.1. Preprocessing of Minpaths/Mincuts
    - 2.2.2. Single-variable Inversion vs. Multiple-variable Inversion
    - 2.2.3. Special Structures
3. Sum of Disjoint Product Technique for Computing Network Reliability
  - 3.1. Concept
  - 3.2. Generalized View
  - 3.3. *SDP* Techniques - A Comparison
4. Recent Developments
  - 4.1. Capacity Related Reliability Evaluation
    - 4.1.1. Terminology
    - 4.1.2. Computing *CRR* from Pathset
    - 4.1.3. Computing *CRR* from Cutset
  - 4.2. Reliability Analysis of Wireless Computer Network
    - 4.2.1. *SDP* Technique to Compute the Reliability and *EHC* of Static Topology *WCN*

- 4.2.2. Computing the Reliability and *EHC* for Special Structure WCN
5. Conclusions

### Quality of Service in Telecommunication Networks

77

Fabricio Carvalho de Gouveia, *Technical University of Berlin, Franklinstr, Berlin, Germany*

Thomas Magedanz, *Technical University of Berlin, Franklinstr, Berlin, Germany*

1. Introduction
2. Quality of Service (QoS) Background
  - 2.1. QoS Definition
  - 2.2. Telecommunication QoS Characteristics
  - 2.3. QoS Parameters
3. QoS Management Schemes
  - 3.1. Policy Based Network Management (PBMN)
  - 3.2. Integrated Services (IntServ)
  - 3.3. Differentiated Services (DiffServ)
  - 3.4. Multi-Protocols Label Switching (MPLS)
  - 3.5. Asynchronous Transfer Mode (ATM)
4. Current Research Efforts in emerging IMS QoS Solutions
5. Conclusion

### Power Management

98

Giuseppe Anastasi, *Department of Information Engineering, University of Pisa, Italy*

M. Conti, *CNR-IIT Institute, Italy*

E. Gregori, *CNR-IIT Institute, Italy*

A. Passarella, *CNR-IIT Institute, Italy*

1. Introduction
2. Storing and Harvesting Energy
  - 2.1. Harvesting Energy from the Environment
3. General Approaches to Power Management in Mobile Devices
  - 3.1. Energy Characteristics of Mobile Devices
  - 3.2. Framework for Power Management
    - 3.2.1. Possible Strategies
  - 3.3. Reactive Policies
    - 3.3.1. Predictive Policies
    - 3.3.2. Stochastic Policies
  - 3.4. Workload Modifications
    - 3.4.1. Proactive Policies
    - 3.4.2. Mixed Policies
  - 3.5. Qualitative Comparison
4. Power Management in Infrastructure-based Mobile Systems
  - 4.1. MAC Protocols with Low Duty Cycle
    - 4.1.1. IEEE 802.11 PSM
    - 4.1.2. Adaptive PSM
    - 4.1.3. Bounded Slowdown Protocol (BSD)
  - 4.2. Sleep/Wakeup Software Protocols
    - 4.2.1. Application-driven Power Management
    - 4.2.2. Communication-based Power Management
  - 4.3. Hybrid Protocols
    - 4.3.1. Self-Tuning Power Management (STPM)
    - 4.3.2. Cross-Layer Power Management
5. Power Management in Pervasive Systems
  - 5.1. Power Management in Multi-hop Ad Hoc Networks
  - 5.2. Power Management in Sensor Networks

## 6. Conclusions

<b>Wireless Networks: Opportunities for Infrastructure-Related Optimization</b>	<b>131</b>
Chutima Boonthum, <i>Hampton University, Hampton, VA 23668, USA</i>	
Stephan Olariu, <i>Old Dominion University, Norfolk, VA 23529, USA</i>	
Ekaterina Shurkova, <i>Old Dominion University, Norfolk, VA 23529, USA</i>	
Lan Wang, <i>Old Dominion University, Norfolk, VA 23529, USA</i>	
Qingwen Xu, <i>Old Dominion University, Norfolk, VA 23529, USA</i>	

1. Introduction
2. Cellular Networks - Basics
  - 2.1. Channel Assignment Schemes - A Quick Overview
3. Satellite Networks
  - 3.1. Challenges
  - 3.2. Mobility Model and Traffic Parameters
  - 3.3. SILK - A Selective Look-ahead Bandwidth Allocation Scheme
    - 3.3.1. SILK the Basic Idea
    - 3.3.2. SILK the Call Admission Strategy
4. An Efficient Infrastructure for Wireless Sensor Networks
  - 4.1. Background: Sensor and Sensor Networks
  - 4.2. Structure and Organization of a Wireless Sensor Network
  - 4.3. Recent Work
  - 4.4. Clustering –A Standard Way of Building a Virtual Infrastructure
  - 4.5. Leader Election
  - 4.6. Beacon Frame
  - 4.7. Collision Resolution
  - 4.8. Slot Competition
  - 4.9. The Active Gateway Mechanism
    - 4.9.1. Active Gateway Table
    - 4.9.2. Active Gateway Confirmation
  - 4.10. Cluster Maintenance
5. A Bio-mimetic View of Sensor Networks
  - 5.1. An ecological model for sensor networks
  - 5.2. Aggregating sensed data: centralized vs. decentralized
6. Concluding Remarks

<b>Mobility Management In Wireless Systems</b>	<b>162</b>
Jiang Xie, <i>The University of North Carolina at Charlotte, USA</i>	
Shantidev Mohanty, <i>Intel Corporation, USA</i>	

1. Introduction
2. Importance of Mobility Management
3. Location Management
  - 3.1. Location Management in Stand-Alone Cellular Networks
  - 3.2. Location Management in Non-IP-Based Heterogeneous Cellular Networks
  - 3.3. Location Management in IP-Based Wireless Networks
4. Handoff Management
  - 4.1. Handoff Process in Stand-Alone Cellular Networks
  - 4.2. Handoff Process in IP-Based Wireless Networks
    - 4.2.1. Network-Layer Handoff Management
    - 4.2.2. Transport-Layer Handoff Management
    - 4.2.3. Application-Layer Handoff Management
    - 4.2.4. Different Steps for Handoff Process of the Existing Mobility Management Protocols
5. Research in Mobility Management
  - 5.1. Research in Location Management
    - 5.1.1. Research in Location Registration

- 5.1.2. Research in Paging
- 5.2. Research in Handoff Management
  - 5.2.1. Single-Layer Handoff Management
  - 5.2.2. Cross-Layer Handoff Management
  - 5.2.3. Application Adaptive Handoff Management
- 6. Conclusion

**Location-aware telecommunication services****184**

Dario Bruneo, *University of Messina, Italy*  
 Luca Paladina, *University of Messina, Italy*  
 Maurizio Paone, *University of Messina, Italy*  
 Antonio Puliafito, *University of Messina, Italy*

- 1. Introduction
- 2. A Brief Analysis of the Location Concept
- 3. Design Issues of Location-aware Service Provisioning
  - 3.1. Reference Scenarios
  - 3.2. Actors Involved in the LAS Provision
  - 3.3. Service Classification
  - 3.4. LAS Architecture
- 4. Positioning Techniques
- 5. An Overview of the Geographic Information System
- 6. Middleware Solutions
  - 6.1. The OpenGIS Location Services (OpenLS)
- 7. Privacy and Security Implications
- 8. Conclusion

**Session Management in Advanced Telecommunication Services****203**

Anand Ranganathan, *IBM T.J. Watson Research Center, USA*  
 Dipanjan Chakraborty, *BM India Research Lab, India*

- 1. Introduction
- 2. Overview of Session Maintenance in Circuit Switched Networks (PSTN)
  - 2.1. ISDN Session Channels
  - 2.2. Common Channel Signaling System Number 7 (SS7)
    - 2.2.1. SS7 Architecture Overview
    - 2.2.2. Relationship to OSI Stack and Layer Overview
    - 2.2.3. Signaling Connection Control Part (SCCP) and User Parts
    - 2.2.4. Performance Parameters
    - 2.2.5. SS7 Signals over the Internet
- 3. Session Maintenance in Packet Switched Networks
  - 3.1. Gateways
  - 3.2. Major Hurdles in Reaching Circuit-switched Standards
  - 3.3. H.323 Primer
- 4. Session Maintenance in Wired and Wireless Networks: Session Initiation Protocol
  - 4.1. Overview of SIP Functionality
  - 4.2. Why SIP?
  - 4.3. SIP Network Elements
  - 4.4. SIP Operation
    - 4.4.1. Basic Call Setup (Initiating a Session)
    - 4.4.2. SIP Registration
  - 4.5. SIP Extensions
  - 4.6. Comparison of SIP with H.323
- 5. Some Specific Examples of the Use of SIP
  - 5.1. SIP and 3GPP for Cellular Networks
  - 5.2. SIP for Advanced Telephony

- 5.3. SIP and Unified Communication
- 5.4. Collaboration
- 6. Conclusions

**Context Aware Telecommunication Services****229**Bill N. Schilit, *Fuji Xerox Palo Alto Laboratory(FXPAL), USA*David M. Hilbert, *Fuji Xerox Palo Alto Laboratory(FXPAL), USA*Jonathan Trevor, *Fuji Xerox Palo Alto Laboratory(FXPAL), USA*

- 1. Introduction
- 2. Dimensions of Context-aware Communication
- 3. Context-aware Communication
  - 3.1. Routing
  - 3.2. Addressing
  - 3.3. Messaging
  - 3.4. Providing Awareness
  - 3.5. Screening
- 4. Context-Aware Communication Products
- 5. Conclusions

**Network Security****247**Christos Douligeris, *Department of Informatics, University of Piraeus, Greece*Panayiotis Kotzanikolaou, *Department of Informatics, University of Piraeus, Greece*

- 1. Introduction
  - 1.1. Security in Information Technology
  - 1.2. Computer Networks
  - 1.3. Telecommunication Networks
  - 1.4. The Goals of Network Security
- 2. Network Security Threats and Attacks
- 3. Security Services and Security Mechanisms
  - 3.1. Security Services
  - 3.2. Security Mechanisms
- 4. Security Issues in Wireless Networks
- 5. Conclusion

**Telecommunication Network Interoperability****265**Paulo Teixeira de Sousa, *European Commission, Belgium*Peter Stuckmann, *European Commission, Belgium*

- 1. Introduction
  - 1.1. Definition of Interoperability
    - 1.1.1. Network View
    - 1.1.2. Customer View
    - 1.1.3. System View
  - 1.2. The Need for Interoperability
  - 1.3. How to Achieve Interoperability
  - 1.4. Interoperability and Standards
- 2. Levels of Network Interoperability
  - 2.1. Network Convergence – Next Generation Networks and Beyond
  - 2.2. Fixed-Mobile Convergence – The IP Multimedia Subsystem
  - 2.3. Service Interoperability
    - 2.3.1. PARLAY and Open Service Access
    - 2.3.2. Open Mobile Alliance
  - 2.4. Network Management Interoperability

- 2.5. Digital Content Interoperability
3. Impact of Convergence on Society
  - 3.1. European Union Policies for Convergence
  - 3.2. Situation and Current Trends
    - 3.2.1. Broadband Access
    - 3.2.2. Mobile Communications
    - 3.2.3. Consumer Electronics
    - 3.2.4. Digital Content and Services
    - 3.2.5. eBusiness
4. Research Challenges for Interoperability
  - 4.1. Cooperation of Heterogeneous Networks
    - 4.1.1. Network Composition
    - 4.1.2. Mobility
    - 4.1.3. Heterogeneity
  - 4.2. Re-configurability
  - 4.3. Interoperable Services
    - 4.3.1. Mobile Services and the Internet
    - 4.3.2. Towards an Interoperable Service Platform
  - 4.4. The Internet of the Future
5. Conclusion

### **Telecommunication Project Management**

299

Mostafa Hashem Sherif, *AT&T, Middletown New Jersey, USA*

1. Introduction
2. Management of Standard Production
  - 2.1. The Networking Technologies
  - 2.2. The Operation Support Systems (OSS)
  - 2.3. Methods and Procedures (M&Ps)
  - 2.4. Content and Applications
3. Examples of Projects in Telecommunication Services
  - 3.1. Adding Capabilities to Public Networks
  - 3.2. Establishing Specialized Networks
  - 3.3. Temporary Networks
4. Characteristics of Projects in Telecommunication Services
  - 4.1. Complex Interfaces
  - 4.2. International dimension
  - 4.3. Multidisciplinary Activities
  - 4.4. No Mass Production
  - 4.5. Diverse User Community
  - 4.6. A Relatively Long Planning Stage
5. How are Public Telecommunication Services Developed?
  - 5.1. Opportunity Analysis and Concept definition
  - 5.2. Product Definition and Project Set-Up
  - 5.3. Design and Procurement of Equipment
  - 5.4. Service Development
  - 5.5. Service Turn-up
  - 5.6. Business and Network Evolution
6. Concluding Remarks

### **Standards for Networked Equipment and Services**

325

Mostafa Hashem Sherif, *AT&T, Middletown New Jersey, USA*

1. Introduction
2. Management of Standard Production
  - 2.1. The Nature of the Standards Setting Organizations

- 2.2. Participation
- 2.3. Access to Documentation
- 2.4. Decision-Making Process
- 2.5. Intellectual Property Considerations
- 2.6. Standards Maintenance and Retirement
- 3. The Management of Standard Development
  - 3.1. Stakeholders Analysis
  - 3.2. Standards Quality
- 4. Subject Matter Classification of ICT Standards
- 5. Life-Cycle Based Classification of ICT Standards
  - 5.1. Technology Life Cycle
  - 5.2. Anticipatory Standards
  - 5.3. Enabling Standards
  - 5.4. Responsive standards
  - 5.5. Standard Development Organizations and the Technology Life Cycle
- 6. Standardization and Innovation
  - 6.1. Classification of Innovations
    - 6.1.1. Incremental Innovations
    - 6.1.2. Architectural Innovations
    - 6.1.3. Platform Innovations
    - 6.1.4. Radical Innovations
  - 6.2. Innovation and Standardization within the Technology Life Cycle
    - 6.2.1. Architectural Innovations and Standards Wars
    - 6.2.2. Architectural Innovations and the Lack of Standards
- 7. Standardization and Innovation in Networked Services
  - 7.1. Incremental Innovation
  - 7.2. Architectural Innovation
  - 7.3. Platform Innovation
  - 7.4. Radical Innovation
  - 7.5. Interactions of Innovations in Equipment and Services
  - 7.6. Lack of Standards in Networked Services
- 8. Conclusions
