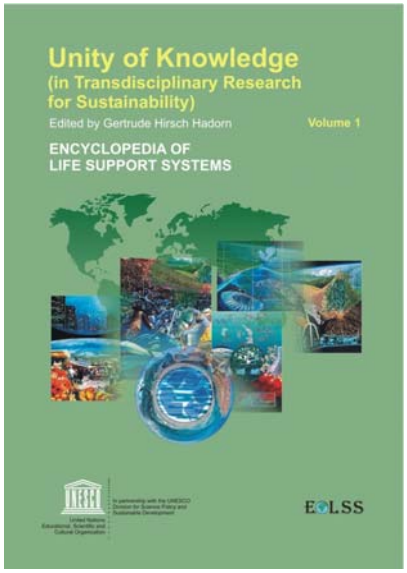
CONTENTS

UNITY OF KNOWLEDGE (IN TRANSDISCIPLINARY RESEARCH FOR SUSTAINABILITY)



Unity of Knowledge (in Transdisciplinary Research for Sustainability) - Volume 1
No. of Pages: 262
ISBN: 978-1-905839-82-7 (eBook)
ISBN: 978-1-84826-982-8 (Print Volume**)**

Unity of Knowledge (in Transdisciplinary Research for Sustainability) - Volume 2
No. of Pages: 316
ISBN: 978-1-905839-83-4 (eBook)
ISBN: 978-1-84826-983-5 (Print Volume**)**

CONTENTS

VOLUME I

Unity of Knowledge in Transdisciplinary Research for Sustainability **1**
Gertrude Hirsch Hadorn, *Swiss Federal Institute of Technology Zürich, Switzerland*

1. Introduction
2. Unity of Knowledge in the History of Ideas: Ontological and Subjective Concepts
3. Unity and Diversity of the Sciences and Humanities
4. Unity of Knowledge in Societal Problem Solving
5. Unity of Knowledge in Education
6. Sustainability
7. Science and Society in Sustainable Development
8. Transdisciplinary Research for Sustainability
9. Outlook

Unity of Knowledge and Transdisciplinarity: Contexts of Definition, Theory and the New Discourse of Problem Solving **35**
Julie Thompson Klein, *Wayne State University, USA*

1. Definition
   - 1.1. Etymology and Typology
     - 1.1.1. Internal Dynamics
     - 1.1.2. External Purpose
   - 1.2. Expanding Definition
     - 1.2.1. A Philosophical Perspective
     - 1.2.2. Expanding Exemplars
     - 1.2.3. Critical Perspectives
2. Transdisciplinarity and Sustainability
   - 2.1. From Interdisciplinary to Transdisciplinary Problem Solving
   - 2.2. Institutional Roots
   - 2.3. Participation
3. The Nature of Transdisciplinary Knowledge
   - 3.1. The Shift from Unity to Complexity
     - 3.1.1. Problem Contexts
     - 3.1.2. Post-normal Science
   - 3.2. The Changing Character of Knowledge
   - 3.3. New Modes of Knowledge Production
4. The Relational Pluralism of Transdisciplinarity
   - 4.1. Images of Transdisciplinarity
   - 4.2. Hybridity
   - 4.3. Centering, Partnering and Networking
     - 4.3.1. Centering
     - 4.3.2. Partnering
     - 4.3.3. Networking
5. Conclusion
   - 5.1. Rethinking Boundaries
   - 5.2. Rethinking Education
   - 5.3. Cultivating a Transdisciplinary “Attitude”

The Relationship between Scientific, Technical and Moral Knowledge in Classical Antiquity **70**
Helmuth Schneider, *University of Kassel, Germany*

1. Introduction

2. Technical, Moral, and Scientific Knowledge in Classical Antiquity
   2.1. Technical Competence and Technical Knowledge
   2.2. Moral Knowledge
   2.3. Scientific Knowledge
3. The Legitimacy of Technology in Ancient Myth and Philosophy
4. The Legitimacy of the Use of Nature
5. The Ancient Critics of Technology

Differentiation of Scientific Disciplines: Causes and Consequences **82**
Rudolf Stichweh, *University of Lucerne, Germany*

1. Introduction
2. Unit Divisions of Knowledge: Classificatory and Archival Functions of Disciplines
3. Disciplines as Production and Communication Systems
4. The Modern System of Scientific Disciplines
5. The Future of the Scientific Discipline

Holism in the Sciences **91**
Marcel Weber, *University of Hannover, Germany*
Michael Esfeld, *University of Lausanne, Switzerland*

1. Holism in biology
   1.1. Reductionism, Mechanism, and Individualism
   1.2. Vitalism
   1.3. Emergentism
   1.4. Examples: Physiology
   1.5. Examples: Ecology
   1.6. Examples: Evolutionary Biology
   1.7. Examples: Genetics
   1.8. Recurring Themes
2. Holism in physics
   2.1. Holism in space–time theories
   2.2. Holism in quantum physics
3. Holism in the social sciences
   3.1. What is social holism?
   3.2. Two types of social holism
   3.3. The historical background of social holism

Philosophical Holism **110**
Michael Esfeld, *Department of Philosophy, University of Konstanz, Germany*

1. Introduction
2. Holism in epistemology and semantics
   2.1. Confirmation holism
   2.2. Holism about justification
   2.3. Semantic holism
   2.4. Rule-following and social holism
3. Holism in methodology
4. Holism in ontology
5. A philosophical characterization of holism
   5.1. Holism in contrast to monism and atomism
   5.2. Properties that make something a part of a holistic system
   5.3. Bottom-up and top-down conceptualizations of holism

Integrating Knowledge in Technology Development **128**
Matthais Wingens, *University of Bremen, Germany*

1. Introduction
2. Postacademic Science: A New Mode of Knowledge Production?
3. An Institutional Perspective on Science and the Societal Application Context
4. A Conceptional Observation on the Relationship between Science, Technology, and Indus
5. Scientific Knowledge, Technical-Industrial Innovations, and Uncertainty
6. Heteronomization of Science: The Reverse Side of the Scientification of Society
7. An Open Question

Transdisciplinary Research in Developmental Cooperation: Origins and Paradigms **144**
Jeannine Brutschin, *Centre for Development and Environment(CDE), Switzerland*
Urs Wiesmann, *Centre for Development and Environment(CDE), Switzerland*

1. Introduction
   1.1. Two Main Aspects of Transdisciplinarity
   1.2. Focus on Common Goals
   1.3. A Head Start of the South in the Field of Transdisciplinarity
2. Science and Society—Dealing with Relevance
   2.1. Development of Participation
   2.2. Rapid Rural Appraisal (RRA): Origin and Evolution
   2.3. Participatory Rural Appraisal (PRA)
   2.4. Sustainable Development Appraisal (SDA)
3. Natural and Social Science—Dealing with Complexity
   3.1. History of Approaches to Development
   3.2. Syndrome Approach
   3.3. Recapitulation
4. Sustainable Development—A Common Value?
   4.1. The Magic Triangle of Sustainable Development
   4.2. "Grindelwald 2000": a Concept for Sustainable Community Development
   4.3. Laikipia: Mitigating Conflicts Over Scarce Water Resources
5. Consequences of Transdisciplinary Research and Future Perspectives

Transdisciplinary Research for Sustainable Development in China: Social-Economic-Natural Complex Ecosystem and Ecopolis Development **167**
Rusong Wang, *Chinese Academy of Sciences, China*

1. Introduction
2. Human Ecology Thinking on Sustainability in China
   2.1. *Daoli*: The Ecology of the HumanNature Relationship
   2.2. *Shili*: The Ecology of Human Activities
   2.3. *Qingli*: Ecological Ethics of Human Relationships
   2.4. Features of Chinese Thinking on Human Ecology and Sustainability
      2.4.1. Holistic Thinking and Orientation towards Harmony
      2.4.2. Emphasizing Humans Rather Than Heavens
      2.4.3. Advocating Symbiosis Rather Than Competition
      2.4.4. Being Self-Reliant but in Awe of Nature
3. Understanding the Social-Economic-Natural Complex Ecosystem
   3.1. Function: Production, Consumption, and Service
   3.2. Dynamics: Energy, Money, Power, and Spirit
      3.2.1. Energy
      3.2.2. Money
      3.2.3. Power
      3.2.4. Spirit
   3.3. Cybernetics: Competition, Symbiosis, and Self-Reliance

3.3.1. Exploitation and Adaptation
3.3.2. Competition and Symbiosis
3.3.3. Interlocking Positive and Negative Feedback
3.3.4. Proliferation and Self-Compensation
3.3.5. Circulation between Wastes and Products
3.3.6. Diversity and Dominance
3.3.7. Structural Growth and Functional Development
3.3.8. Keeping Away from Extreme Risk and Opportunity
3.4. Goals of Sustainable Development: Wealth, Health, and Faith
3.4.1. Multifaceted and Interactive Wealth
3.4.2. Multifaceted and Interactive Health
3.4.3. Multifaceted and Interactive Faith
4. Ecopolis Development: Planning Sustainable Community
4.1. Ecoscape: Systematically Responsible Planning
4.2. Eco-industry: Totally Functioning Engineering
4.3. Eco-culture: Ecologically Vitalized Management
5. Action with Nature: Pilot Studies of Ecopolis Development in China
5.1. Baiquan Agricultural Ecological Engineering
5.1.1. Soil Erosion Control
5.1.2. Change of Range of Land Use
5.1.3. Eco-Farming Technology Transfer
5.1.4. Renewable Energy Use
5.1.5. Benefit Analyses
5.2. Xishan Eco-Village
5.2.1. Community Development
5.2.2. Resource Regeneration
5.3. Eco-Building Development in Jinghua City, Zhejiang Province
5.4. Guanghan Pilot: Ecological Engineering for Municipal Solid Waste Recycling
5.5. Dafeng Eco-County
6. Conclusion

Index **201**

About EOLSS **207**

VOLUME II

Methodology of Transdisciplinary Research **1**
Gertrude Hirsch Hadorn, *Swiss Federal Institute of Technology Zürich, Switzerland*
Christian Pohl, *Swiss Federal Institute of Technology Zürich, Switzerland*
Martin Scheringer, *Swiss Federal Institute of Technology Zürich, Switzerland*

1. Introduction
2. A typology of transdisciplinary research
3. The systematicity approaches
3.1. Approaches Focusing on Integrating Theoretical Concepts
3.2. Approaches Focusing on Integration within the Research Process
3.3. Advantages and Difficulties of the Systematicity Approaches
4. The trade and negotiate approaches
4.1. Basic Assumptions
4.2. STS-Studies in the Field of Transdisciplinary Collaboration
5. The learning approaches
5.1. The Principles of Action Research
5.2. Action Research and Learning in Transdisciplinary Projects
6. Conclusion

Problem Transformations in Transdisciplinary Research **30**
Egon Becker, *University of Frankfurt, Germany*

1. The Emergence of Transdisciplinary Research for Sustainability
   1.1. The constitution of discursive objects
   1.2. The order of discourse
   1.3. Structural levels of discourse
2. Process Models for Transdisciplinary Research
   2.1. A general model for research processes
   2.2. The cognitive order of sustainability research
3. Problems: The Fountainhead of Science
   3.1. The conceptual world of problems
   3.2. Socio-ecological problems
4. Problem Processing in Transdisciplinary Research Processes
   4.1. Problem-focused scientific work
   4.2. Research as a problem solving process
5. Conclusions: Ordering and renewal of transdisciplinary knowledge

Systems Analysis and Modeling in Transdisciplinary Research **57**
Gerhard Petschel-Held, *Potsdam Institute for Climate Impact Research, Germany*

1. Introduction
2. Systems Analysis
   2.1. Static Analysis
   2.2. Systems Dynamics
3. Modeling
   3.1. Model Development
   3.2. Uncertainty
   3.3. Model Coupling and Integration
   3.4. Examples
      3.4.1. IPCC SRES: Building Scenarios
      3.4.2. The Delft Process: Policy Interactions
   3.5. Limitations and Critique

Methods for Sustainability Assessment: Sustainability Indicators **73**
Robert Paehlke, *Trent University, Canada*

1. Introduction
2. Sustainability: Definitions and Implications
3. Sustainability Theory: The Triple Bottom Line
4. What Are Sustainability Indicators?
5. The Political Context and Content of Sustainability Analysis
6. Aggregated Sustainability Indicators
7. Visualization and Communication

Incommensurability of Knowledge: Theories and Values **91**
Paul Hoyningen-Huene, *University of Hannover, Germany*
Peter Schaber, *University of Zurich, Switzerland*

1. Introduction
2. Incommensurability of Theories
   2.1. What Does the Incommensurability of Theories Concern?
   2.2. Semantic Incommensurability
   2.3. Methodological Incommensurability
3. Incommensurability of Values

3.1. Incommensurability of Values: the Different Meanings
3.2. Arguments in Favor of Rough Equality and Incomparability
3.3. Objections
3.4. Theoretical and Practical Incomparability
3.5. Practical Consequences

Management of Transdisciplinary Research **106**
Kirsten Hollaender, *Research Consultancy, The Netherlands*
Marie Celine Loibl, *Austrian Institute for Applied Ecology, Austria*
Arnold Wilts, *Free University, The Netherlands*

1. Introduction: Relevance of Management Skills in Transdisciplinary Research
   1.1. Inter – and Transdisciplinarity as Concept and Practice
   1.2. Empirical Basis
   1.3. Why Management?
   1.4. Project Management vs. Project Leadership
2. Managing How, What, and Who
   2.1. Social Level: Management of Interests, Conflict, and Relations
      2.1.1. Recommendations for the Management of Interests, Conflicts, and Relations
   2.2. Communicative Level: Management of Communication and Information
      2.2.1. Recommendations for the Management of Communication and Information
   2.3. Cognitive Level: Management of Knowledge and Integration
      2.3.1. Recommendations for Methods for the Management of Knowledge and Integration
3. Analyses of Empirical Examples
   3.1. Role of Management in the Research Program Cultural Landscape Research
   3.2. Role of Management in the German Research Program "Urban Ecology"
      3.2.1. Group A: Integration through Concentration on one Central Goal
      3.2.2. Group B: Multidisciplinarity
      3.2.3. Group C: Integration through Network
      3.2.4. Group D: Integration through Systems Analysis
      3.2.5. Group E: Cooperative Integration
   3.3. Conclusions and Further Observations
      3.3.1. Management and Leadership
      3.3.2. Authoritative vs. Democratic Management Styles
      3.3.3. Thematic Scope and Concentration on Joint Problems
      3.3.4. Conflict
      3.3.5. Group Identity and Responsibility
      3.3.6. Delegation of Integration Tasks
      3.3.7. Diversity of Partners
4. Future Perspectives and Challenges

Evaluation of Transdisciplinary Research **132**
Maximilian Krott, *Georg-August-University Goettingen, Germany*

1. Investigating the Significance of Transdisciplinary Research
2. Evaluation by a Scientific Community
3. Fact Finding by Meta Scientific Evaluation
4. Meta Scientific Explanations of Transdisciplinary Research
5. Evaluation by Politics
6. Evaluation by Communication with the Public and the Media
7. Participative Evaluation
8. Tailoring Evaluation

Institutional Changes for Transdisciplinary Research and Learning **147**
Gary W. Matkin, *University of California, USA*

1. Introduction
2. The early history of university management of intellectual property
3. The later history and current status of patentable intellectual property
   3.1. Intellectual Property after the War
   3.2. Intellectual Property, Universities, and the Federal Government
   3.3. Current University Management of Patentable Intellectual Property
4. University management of copyrightable intellectual property
5. Management of copyrighted property and transdisciplinarity
   5.1. Transdisciplinarity and Cultural Advancement
   5.2. Transdisciplinarity and Scholarly Publication
   5.3. Transdisciplinarity and Teaching/Learning
6. Conclusion

Science Policy for Transdisciplinary Research **165**
Karen Kastenhofer, *University of Vienna, Austria*
Ines Omann, *University of Graz, Austria*
Karl W. Steininger, *University of Graz, Austria*
Sigrid Stagl, *University of Leeds, UK*

1. Introduction
2. Transdisciplinarity
   2.1. Definitions of Transdisciplinarity
      2.1.1. Transdisciplinary Concepts in the Philosophy of Science
      2.1.2. Transdisciplinary Research as 'Post-normal Science'
      2.1.3. Definitions of Transdisciplinary Research
   2.2. Transdisciplinarity and the Changing (Self-)Perception of Science
   2.3. Problems in the Field of Transdisciplinary Research
      2.3.1. Problems Arising within the Context of both Inter- and Transdisciplinary Research
      2.3.2. Problems Arising Especially in the Context of Transdisciplinary Research
   2.4. Necessity, Changes and New Possibilities via Inter- and Transdisciplinarity
3. Science Policy
   3.1. Governmental Politics, Society and Science as Interacting Domains in Society
   3.2. New Perspectives - Making Implicit Factors Explicit
4. Science Policy for Transdisciplinary Research
   4.1. Pre-conditions
      4.1.1. Societal demand
      4.1.2. Top-Down Definition of Crucial Issues for Sustainable Develoment
      4.1.3. Pooling of funding
      4.1.4. Institutional Cooperation
   4.2. Crucial demands
      4.2.1. Evaluation criteria
      4.2.2. Project management
      4.2.3. Funding Level
      4.2.4. Resource Structure
   4.3. Educational and socialization aspects
5. Conclusions

Transdisciplinarity and Disciplinarity in the University of the Future **191**
Sam Garrett-Jones, *University of Wollongong, Australia*

1. Introduction: Universities and the socialization of knowledge production
2. Disciplines and transdisciplinarity
3. Theoretical models of the role of universities and disciplines
   3.1. A 'Triple Helix' View of the University
   3.2. A ' Mode 2' View of the University
4. Evidence of academic transdisciplinarity

- 4.1. Structural Changes in Universities and Academic Units
- 4.2. Communication Patterns: Cross-sectoral Collaboration and Transdisciplinarity in Publications
- 4.3. Mapping the Socio-economic Connections of Academic Research

5. The University of the Future
   - 5.1. The Importance of Universities
   - 5.2. Changing Academic Disciplines
   - 5.3. A Global Model for the University?
   - 5.4. University Structures and Management
   - 5.5. Challenges for the 21st Century University
     - 5.5.1. Academic Structures
     - 5.5.2. Academic Culture and Careers
     - 5.5.3. Academic Evaluation
6. Conclusion

Transdisciplinary and Integrative Science:Humanity's Mind and Potential **211**
Diederik Aerts, *Brussels Free University, Belgium*

1. Knowledge, Science, Integration, and Transdisciplinarity
2. Individual Human Talent: Seeing, Thinking, Evaluating, and Planning
3. The Short-Term Orientation of the Free Market System and Corrections by the State
4. Children and Artists, Copyright and Royalties: How the Market Deals with Cultural Entities
5. The "Maxwell Fund" and the "Human Rights Fund"
6. Developing Humanity’s Mind and Body
7. The Importance of Transdisciplinarity: Idealization and the Modesty of Science
8. Variety, Potency, and Robustness versus Efficiency, Uniformity, and Yield
9. The Lion and the Profiteer: Dioxin and Health
10. The Running and Stumbling Society: Permanence of the Exceptional, War and Peace
11. Actuality, Potentiality and the Nature of Reality

Knowledge Integration Strategies **231**
Steve Fuller, *University of Warwick, UK*

1. The Two Great Metaphysical Strategies: Instantiation and Emergence
   - 1.1. These Strategies Applied to Knowledge Integration: Universalism versus Globalism
   - 1.2. The Postmodern Condition as a Challenge to These Strategies
   - 1.3. From Instantiation and Emergence to Closed and Open Sciences
2. The Social Epistemology of Instantiation and Emergence: Realism versus Constructivism
3. Historical Conditions for Knowledge Integration
   - 3.1. Knowledge Integration as Natural: Deductive and Inductive Versions
   - 3.2. Knowledge Integration as Artificial
     - 3.2.1. Pro-integrationism: From Sublation to Reduction
     - 3.2.2. Anti-integrationism: From Neo-Kantianism to Neo-Kuhnianism
4. The Future of Knowledge Integration: Identifying and Overcoming the Obstacles
