

CONTENTS

BIOLOGICAL SCIENCE FUNDAMENTALS AND SYSTEMATICS

Biological Science Fundamentals and Systematics Volume 1

eISBN : 978-1-84826-304-8 (eBook)

ISBN : 978-1-84826-754-1 (Print Volume)

No. of Pages: 493

Biological Science Fundamentals and Systematics Volume 2

eISBN : 978-1-84826-305-5 (eBook)

ISBN : 978-1-84826-755-8 (Print Volume)

No. of Pages: 322

Biological Science Fundamentals and Systematics Volume 3

eISBN : 978-1-84826-306-2 (eBook)

ISBN : 978-1-84826-756-5 (Print Volume)

No. of Pages: 369

Biological Science Fundamentals and Systematics Volume 4

eISBN : 978-1-84826-189-1 (eBook)

ISBN : 978-1-84826-639-1 (Print Volume)

No. of Pages: 346

CONTENTS

VOLUME I

Biological Science Fundamentals (Systematics)	1
Giancarlo Contrafatto, <i>School of Life and Environmental Science, University of Natal Durban, Durban, South Africa</i>	
Alessandro Minelli, <i>Department of Biology, University of Padova, Padova, Italy</i>	

1. Introduction
2. Life on Earth
3. The Geological Scenario and the Major Evolutionary Transitions
 - 3.1. Some Fundamentals of Geology
 - 3.2. Geological Changes, Evolutionary Transitions, and Extinctions
 - 3.2.1. Major Evolutionary Transitions
4. The Cell
 - 4.1. The Procaryotic Cell
 - 4.2. Autotrophs and Heterotrophs
 - 4.3. The Eucaryotic Cell
 - 4.4. The Emergence of Eucaryotes and the Kingdoms of Life
5. Routes to Multicellularity
 - 5.1. Aggregative
 - 5.2. Plasmoidal
 - 5.3. Clonal
 - 5.4. Soma and Germ Plasm
6. Growth and Development
7. Life-Cycles
 - 7.1. Direct and Indirect Development
 - 7.2. The Life-Cycles of Cnidarians, Rotifers, and Aphids
 - 7.3. Plant Life-Cycles
8. Individual, Colony, Society
9. Populations, Species, and Communities
10. The Continuity of Life
 - 10.1. Descent with Modification
 - 10.2. Mutations
 - 10.3. Gene Assortment: Inheriting Variation
 - 10.4. Selection, Random Change
11. Adaptation
12. Life Forms
 - 12.1. Living In the Sea
 - 12.2. Nutrition
 - 12.3. From the Sea to the Internal Waters
 - 12.4. Water to Land
13. Biodiversity
14. The Science of Taxonomy

History and Scope of Biological Sciences	51
Alberto Mario Simonetta, <i>Dipartimento di Biologia Animale e Genetica "L.Pardi", Università di Firenze, Italy</i>	

1. Ancient and Medieval Times up to the 16th Century
2. Post-Renaissance Developments
3. Paleontology and Evolution
4. Morphology and Physiology
5. Genetics
6. Behavior

7. Ecology and Applied Ecology

History of Biology

66

Alberto Mario Simonetta, *Dipartimento di Biologia Animale e Genetica, "L. Pardi," University of Firenze, Italy*

1. Introduction
2. Antiquity
3. The Medieval and Renaissance Periods
4. The Development of Morphology
5. Palaeontology
6. Taxonomy and Evolution
7. Hystology, Reproduction and embryology
8. Physiology
9. Genetics
10. Ecology and Ethology
11. Pathology

Characteristics of Living Beings

84

Pietro Omodeo, *Department of Evolutionary Biology and Department of Environmental Sciences, University of Siena, Italy*

1. Introduction
 - 1.1. Epistemology of Biology
2. Former Conceptions of Life
 - 2.1. The Birth of Biology
 - 2.2. Metabolism, 'Irritability' and Cellular Organisation
 - 2.3. The Becoming of Individuals and Species
 - 2.4. Inadequacy of Mechanistic Interpretations and the Revival of Vitalism
 - 2.5. The Gestation of the Concept of Biological Information
 - 2.6. Information Flux is an Endowment of Every Living Being
 - 2.7. First Conclusions on Living Beings
3. Current Conceptions About Living Beings
 - 3.1. The Rise of Genetics
 - 3.2. The Mighty Advance of Dynamic Biochemistry
 - 3.3. The Sources of Information Flux and the Self-Control in Living Beings
 - 3.4. Limits and Peculiarities of the Sensory Flux
 - 3.5. Self Regulation of Genetic Information
 - 3.6. Information and Needs
 - 3.7. Death and Life
 - 3.8. Ontogeny and Morphogenesis
4. Evolution
 - 4.1. Is it Conceivable that a Living Being May Not Evolve?
 - 4.2. The Darwinian Assumptions
 - 4.3. The Subjects of Darwin's Evolution
5. Conclusion
 - 5.1. Summary of the Properties of Living Beings
 - 5.2. Final Definition

Levels of Biotic Organization

107

Alberto Mario Simonetta, *Dipartimento di Biologia Animale e Genetica, "L. Pardi," University of Firenze, Italy*

1. Introduction
2. The Development of Organization at the Individual Level

3. The Development of Organization: Embryology and Cycles
4. The Paleontological Account
5. The Intertaxa Organization and Evolution
6. Symbiosis and Parasitism
7. Conclusion

Population, Species and Communities

118

Juergen Tomiuk, *Institute of Anthropology and Human Genetics, University of Tübingen, Germany*
 Lutz Bachmann, *Zoological Museum, University of Oslo, Norway*

1. Introduction
2. Populations and Species
 - 2.1. The Species Concept
 - 2.2. The Population Concept
 - 2.2.1. Population Size
 - 2.2.2. Constant Reproduction of Populations
 - 2.2.3. Variation in Population Size
3. Species Communities
 - 3.1. General Aspects
 - 3.2. Composition of Communities
 - 3.3. Island Biogeography
 - 3.4. Biological Invasions
 - 3.5. Interaction
 - 3.5.1. Interspecific Competition
 - 3.5.2. Mutualism
 - 3.5.3. Host-parasite Relations
 - 3.5.4. Predator-prey Relations
4. Conclusion

The Philosophy of Biological Sciences

137

Alberto Mario Simonetta, *Dipartimento di Biologia Animale e Genetica "L. Pardi," University of Firenze, Italy*

1. Introduction
2. Basic Issues in the Philosophy of Biology: Is Biology an Experimental or a Historical Discipline?
3. Methodological Debates
4. Realism versus Nominalism
5. The Population Concept: Problems and Inferences
6. Bioethics: Some Sample Problems

The Origin and Evolution of Early Life

149

Martino Rizzotti, *Department of Biology, University of Padova, Italy*

1. Introduction
2. The Need for Organic Molecules
3. Asymmetry in Organic Molecules
4. The Need for Suitable Energy
5. The Rise and Fall of Organic Chemistry of Galaxies
6. Organic Chemistry on Orbiting Bodies
7. The Need for Liquid Water
8. The Evolution of Hydrospheres
9. Self-organization and Self-replication
10. Encapsulation and Translation
11. The First Ecosystems
12. The Probability and Stability of Biospheres

Formation of the Building Blocks of Primitive Life**181**Andre Brack, *Centre de Biophysique Moléculaire, CNRS, Rue Charles Sadron, F-45071 Orléans cedex*James P. Ferris, *Department of Chemistry, Rensselaer Polytechnic Institute, Troy NY 12180-3590, USA*

1. Introduction
2. The role of water
3. Possible environments for the production of prebiotic organic molecules
 - 3.1. Production of CHONS in the atmosphere
 - 3.2. Submarine hydrothermal systems
 - 3.3. Delivery of extraterrestrial CHONS
4. Availability of the primitive building blocks
5. Production of homochiral building blocks
6. Conclusion

From The Building Blocks to Life**194**Andre Brack, *Centre de Biophysique Moléculaire, CNRS, Rue Charles Sadron, F-45071 Orléans cedex, France*James P. Ferris, *Department of Chemistry, Rensselaer Polytechnic Institute, Troy NY 12180-3590, USA*

1. Introduction
2. A Primitive Cellular Life
 - 2.1. Prebiotic RNA
 - 2.1.1. The Montmorillonite Clay-catalyzed Synthesis of RNA
 - 2.1.2. Metal Ion Catalysis of RNA Synthesis
 - 2.1.3. Template-directed RNA Synthesis
 - 2.2. Prebiotic Polypeptides
 - 2.2.1. Polypeptide Formation on Clay Minerals
 - 2.2.2. Peptide Elongation on Minerals
 - 2.2.3. Polypeptide Formation via N-Carboxyanhydrides
 - 2.2.4. Proteinoids
 - 2.2.5. Polypeptide Formation Using Simulated Hydrothermal Conditions
 - 2.2.6. Thermal Conversion of Amino Acid Amides to Polypeptides
 - 2.2.7. Prebiotic Polypeptide Structure and Stability
 - 2.2.8. Prebiotic Polypeptide Catalysis
3. Primitive Life Based on RNA: The RNA World
 - 3.1. RNA Analogs and Surrogates
 - 3.1.1. Nucleotides with a Pyrophosphate Backbone
 - 3.1.2. Pyranosyl-RNA, a Hexose Nucleic Acid, and Threose-RNA, a Tetrose Nucleic Acid
 - 3.1.3. Peptide Nucleic Acid
4. Autocatalysis Preceding RNA
5. Conclusion

The Earliest Anaerobic and Aerobic Life**212**Martino Rizzotti, *Department of Biology, University of Padova, Italy*

1. The First Cells
2. From Heterotrophy to Autotrophy
3. Ancient Oxygen-producing Photosynthesis
4. The First Aerobic Microorganisms
5. Origin of the Organelles of Bacterial Cells
6. Origin of the Nucleus
7. Origin and Evolution of the Mitochondrion
8. Origin and Evolution of Plastids
9. Origin of the Cilium
10. The Rise of Highly Differentiated Organisms

Evolution**231**Saverio Forestiero, *Department of Biology, University of Rome "Tor Vergata," Italy*

1. Introduction: The Nature of Evolution
 - 1.1. Differentiating Replicators and Interactors
 - 1.2. The Historical Nature of Evolution
 - 1.3. Evolution Does Not Necessarily Mean Progress
2. Major Transitions in Evolution
 - 2.1. Natural Selection and Levels of Organization
3. Different Approaches to the Study of Evolution
4. Microevolution
 - 4.1. The Causes of Evolution
 - 4.2. Natural Selection
5. Adaptive Evolution
 - 5.1. Adaptation
 - 5.2. Adaptations and Adaptive Responses
 - 5.3. Adaptation and Exaptation
 - 5.4. Coevolution
6. Neutral Evolution
7. Species and Speciation
8. Macroevolution
9. Phylogeny
10. Evolution, Complexity, and the Information Content of Living Beings

History of Evolutionary Theory**254**Barbara Continenza, *Dipartimento di Ricerche Filosofiche, Facoltà di Lettere e Filosofia, Università di Roma "Tor Vergata", Roma, Italia*

1. Introduction
2. Scientific Historiography and the Analysis of the Theoretical Concepts
3. The Definition of "Species"
4. The Problem of Classification
5. Linneus, the "System" and the "Methods"
6. Buffon and the *nuance* of Nature
7. The Historical Dimension and the Re-orientation of Natural History
8. Lamarck and Transformism
9. Paleontology and Geology

The Darwinian View of Life**270**Barbara Continenza, *Dipartimento di Ricerche Filosofiche, Facoltà di Lettere e Filosofia, Università di Roma "Tor Vergata", Roma, Italia*

1. Introduction
2. Evolutionism and Darwinism
3. What are the Laws of Life?
4. The Structuring of a New Theoretical Picture
5. The *Origin of Species* and its Critics
6. Toward a Natural History of Mind

Evolution and the Species Concept**289**Peter John Taylor, *Durban Natural Science Museum, South Africa*

1. Introduction
2. Historical Aspects
 - 2.1. Pre-Darwin

- 2.2. Darwin's View
- 2.3. Post-Darwin (Modern Synthesis)
3. Current Paradigms and Challenges
 - 3.1. Philosophical Perspectives: The Individual Species Concept
 - 3.2. Current Paradigm: The Biological Species Concept
 - 3.2.1. Isolating Barriers
 - 3.2.2. Limitations of the Biological Species Concept
 - 3.2.2.1. Non-universality
 - 3.2.2.2. Inapplicability to Multi-dimensional Situations
 - 3.2.2.3. Incomplete Speciation
 - 3.3. Challenges, Extensions and Alternatives to the Biological Species Concept
 - 3.3.1. Evolutionary Species Concepts
 - 3.3.2. Phenetic Species Concept
 - 3.3.3. Ecological Species Concept
 - 3.3.4. Recognition Species Concept
 - 3.3.5. Cohesion Species Concept
 - 3.3.6. Phylogenetic Species Concepts
4. A Case Study
5. The Future: Towards a Holistic Approach?
 - 5.1. Which Criteria?
 - 5.2. Monism versus Pluralism
6. Conclusions

Speciation and Intra-specific Taxa

311

Peter John Taylor, *Durban Natural Science Museum, South Africa*

Giancarlo Contrafatto, *School of Biological and Conservation Sciences, University of KwaZulu-Natal Durban, South Africa*

1. Introduction
2. Time frame for speciation
3. Ecological considerations
4. Genetic models of speciation
 - 4.1. Speciation by natural selection
 - 4.2. Wright's shifting balance theory
 - 4.3. Founder-effect models
 - 4.4. How many "speciation genes"?
 - 4.5. Genetic properties of species
5. Modes of speciation
 - 5.1. Allopatric speciation
 - 5.1.1. Intra-specific taxa
 - 5.1.2. Clinal variation
 - 5.1.3. Vicariance model
 - 5.1.4. Peripatric model
 - 5.1.5. Reinforcement
 - 5.2. Parapatric speciation
 - 5.3. Stasipatric speciation: the role of chromosomes
 - 5.3.1. Chromosome rearrangements and meiotic segregation
 - 5.3.2. Post-zygotic isolation: two case studies
 - 5.4. Sympatric speciation
6. Speciation in plants
 - 6.1. Speciation by polyploidy
 - 6.2. Speciation by hybridization
7. Conclusions

Natural Selection and the Effects of Ecological Interaction on Populations

338

Piero Cervella, *Dipartimento di Biologia Animale e dell'Uomo, Università di Torino, Torino, Italy*
 Massimiliano DelPero, *Dipartimento di Biologia Animale e dell'Uomo, Università di Torino, Torino, Italy*
 Giampaolo Zampicini, *Dipartimento di Biologia Animale e dell'Uomo, Università di Torino, Torino, Italy*

1. Introduction
 - 1.1. Adaptation and Evolution
2. Natural Selection
 - 2.1. The Different Aspects of Natural Selection
 - 2.1.1. Stabilizing Selection
 - 2.1.2. Directional Selection
 - 2.1.3. Disruptive Selection
 - 2.1.4. Frequency-dependent Selection
 - 2.1.5. Density-dependent Selection
 - 2.1.6. Sexual Selection
 - 2.1.7. Kin Selection
 - 2.1.8. Indirect Selection
3. Non-selective Aspects of Population Biology
 - 3.1. Genetic Drift
 - 3.1.1. Founder Effect
 - 3.1.2. Bottleneck Effect
 - 3.1.3. Gene Flow
4. Deterministic and Stochastic Concerns in Population Biology
 - 4.1. Interactions between Genotypes and Environment
 - 4.2. Metapopulations
 - 4.2.1. Local Extinction
 - 4.2.2. Recolonisation
5. Conclusions

Cell and Tissue Structure in Animals and Plants

359

Michael K. Richardson, *Institute of Evolutionary and Ecological Sciences, Leiden University, Kaiserstraat 63, Postbus 9516, 2300 RA Leiden, The Netherlands*
 L. Goosen-de Roo, *Institute of Molecular Plant Sciences, Clusius Laboratory, Leiden University, Wassenaarseweg 64, 2333 AL, Leiden, The Netherlands*

1. Introduction
 - 1.1. Scope of the Article
2. Cell and Tissue Development
 - 2.1. Development of Animal Cells and Tissues
 - 2.2. Developmental Processes in Higher Plants
 - 2.2.1. Tissue Origins in Higher Flowering Plants
 - 2.2.2. Cell Division, Growth and Differentiation
 - 2.2.3. Initials in Meristems
 - 2.3. The Size of Cells
 - 2.4. Methods in Histology and Cytology
3. Cell Ultrastructure
 - 3.1. Cell Membrane
 - 3.2. Plant Cell Wall
 - 3.2.1. Cellulose and Other Cell Wall Substances
 - 3.2.2. Cell Wall Formation
 - 3.2.3. Middle Lamella, Primary Cell Wall and Secondary Cell Wall
 - 3.2.4. Communication between Cells
 - 3.3. Cytoplasm
 - 3.4. The Nucleus of Eukaryotic Cells
 - 3.4.1. Nuclear Membrane
 - 3.4.2. Genetic Material

- 3.5. Other Structures in the Cytoplasm
 - 3.5.1. Mitochondria
 - 3.5.2. Plastids
 - 3.5.3. Endomembrane System (Lysosomes, Golgi Complex, ER, Vacuoles)
 - 3.5.4. Ribosomes
 - 3.5.5. Cytoskeleton (Microtubules, Actin Filaments)
 - 3.5.6. Projections from the Animal Cell Surface (Flagella, Cilia, Microvilli)
4. Selected Examples of Differentiated Cell Types
 - 4.1. Pigment Cells
 - 4.2. Muscle Cells
 - 4.3. Plant Root Hairs
 - 4.4. Vessel Elements in Plants
5. General Organisation of Tissues
 - 5.1. Tissue Systems in Plants
 - 5.2. Animal Extracellular Matrix (ECM)
6. Some Examples of Specialised Tissue Types
 - 6.1. Plant Epidermis
 - 6.2. Xylem
 - 6.3. Animal Cartilage and Bone
 - 6.4. Epithelia
 - 6.5. Nervous Tissue

Biological Homeostasis

387

Pietro Omodeo, *Department of Evolutionary Biology and Department of Environmental Sciences, University of Siena, Italy*

1. Introduction
2. Stabilization
3. Homeostasis
 - 3.1. Logic and Structure of the Homeostat
 - 3.2. The Components of the Homeostat: the Measuring Unit
 - 3.3. The Components of the Homeostat: The Effector
 - 3.4. The Control of Controllers
 - 3.5. The Control of Stores
4. Homeorrhexis, the Automatic Control of Behavior
 - 4.1. Trajectory Control
 - 4.2. Smooth Control
 - 4.3. Coordinate Control in Homeostasis and Homeorrhexis
5. Control of Development and Reproduction
 - 5.1. Exogenous and Endogenous Clock and the Calendar
 - 5.2. Embryonic Regulation
 - 5.3. Control of the Flux of Genetic Information
6. Conclusion

Patterns and Rates of Species Evolution

401

Michael James Benton, *Department of Earth Sciences, University of Bristol, Bristol, BS8 1RJ, UK*

1. Introduction
2. Biological and morphological species concepts
3. Evidence from ecology and palaeobiology
 - 3.1. The cichlid fishes of the African rift valleys
 - 3.2. Sticklebacks and speciation by natural selection
 - 3.3. Ice ages and species migrations
 - 3.4. The punctuated equilibrium revolution
 - 3.5. Stasis
 - 3.6. Speciation and ecophenotypic change: the rift valley snails

4. Fossil evidence of speciation.
 - 4.1. Microfossils
 - 4.2. Shallow marine invertebrates
 - 4.3. Terrestrial vertebrates
5. Species diversification through time
 - 5.1. Biodiversity today
 - 5.2. Biodiversity through time - patterns of increase
 - 5.3. Biodiversity through time - land and sea compared
 - 5.4. Explanations for patterns of diversification
6. Evolutionary patterns and processes

Index 427

About EOLSS 433

VOLUME II

Classification and Diversity of Life Forms 1
 Alessandro Minelli, *Department of Biology, University of Padova, Padova, Italy*
 Giancarlo Contrafatto, *School of Life and Environmental Science, University of Natal, Durban, South Africa*

1. Natural vs. artificial classifications
2. Classification vs. system
3. Nomenclature
 - 3.1. The international codes of nomenclature
 - 3.2. Nomenclatural stability: problems and solutions
 - 3.3. Ethnotaxonomy
4. The diversity of life
 - 4.1. Nature and origin of biological diversity
 - 4.2. Species known and estimated
 - 4.3. Big genera
5. Taxonomy and nomenclature of domesticated animals and cultivated plants
6. The tools of classification

Historical Review of Systematic Biology and Nomenclature 27
 Alessandro Minelli, *Department of Biology, Via U. Bassi 58B, I-35131, Padova, Italy*

1. The Origins
2. From Classical Antiquity to the Renaissance Encyclopaedias
3. From the First Monographers to Linnaeus
4. Concepts and Definitions: Species, Homology, Analogy
5. The Impact of Evolutionary Theory
6. The Last Few Decades
7. Nomenclature
8. Natural History Collections

Metabolic Diversity in Prokaryotes and Eukaryotes 40
 Aharon Oren, *Department of Plant and Environmental Sciences, The Institute of Life Sciences, The Hebrew University of Jerusalem, Jerusalem, Israel.*

1. Introduction
2. The Thermodynamic and Mechanistic Basis of Cellular Metabolism

- 2.1. Dissimilatory Metabolism
 - 2.1.1. The Phototrophic Way of Life
 - 2.1.2. The Chemoheterotrophic Way of Life
 - 2.1.3. The Chemoautotrophic Way of Life
- 2.2. Assimilatory Metabolism
 - 2.2.1. Autotrophy
 - 2.2.2. Heterotrophy
3. Metabolic Diversity Within the Three Domains of Life: *Archaea*, *Bacteria* and *Eucarya*
4. Phototrophy - The Use of Light as Energy Source
 - 4.1. Oxygenic Photosynthesis of Plants and Cyanobacteria
 - 4.2. Anoxygenic Photosynthesis in Bacteria
 - 4.3. Retinal Pigment-Based Phototrophy
5. Heterotrophy
 - 5.1. Aerobic Respiration
 - 5.2. Anaerobic Respiration
 - 5.3. Fermentation
6. Chemoautotrophy
 - 6.1. Nitrification
 - 6.2. Oxidation of Reduced Sulfur Compounds
 - 6.3. Oxidation of Reduced Iron and Manganese
 - 6.4. Aerobic Oxidation of Hydrogen
 - 6.5. Anaerobic Oxidation of Hydrogen: Methanogens and Homoacetogens
7. Metabolic Diversity and the Cycles of Carbon, Nitrogen, Sulfur and Other Elements

Diversity of Form, Function and Adaptation in Microorganisms

77

Aharon Oren, *Department of Plant and Environmental Sciences, The Institute of Life Sciences, The Hebrew University of Jerusalem, Jerusalem, Israel.*

1. Introduction
2. Cell Size and Cell Shape in the Prokaryotes
 - 2.1. Small is Powerful
 - 2.2. Appendages and Other Strategies to Increase Cell Surface
 - 2.3. The Largest Prokaryotes
3. The Outer Layers of the Prokaryotic Cell
 - 3.1. The Cell Wall and the Cytoplasmic Membrane
 - 3.2. Fimbriae and Pili
 - 3.3. Exopolysaccharides
4. Special Intracellular Structures
 - 4.1. Intracellular Membrane Structures
 - 4.2. Storage Materials
5. Motility Organelles
 - 5.1. Flagella
 - 5.2. Magnetosomes
 - 5.3. Gas Vesicles
6. Survival and Dispersal Forms
7. Multicellular Differentiation and Special Life Cycles in Prokaryotes
 - 7.1. Heterocysts and Other Specialized Cells of Cyanobacteria
 - 7.2. *Bdellovibrio*, the Intracellular Predator of Bacteria
 - 7.3. The Life Cycle of *Caulobacter* and *Hyphomicrobium*
 - 7.4. The Life Cycle of Myxobacteria
8. Diversity of Form, Function, and Adaptation - The Lower Eucaryotes and the Prokaryotes Compared

Diversity of Form, Function and Adaptation in Fungi

97

Silvano Onofri, *Department of Environmental Sciences, University of Tuscia in Viterbo, Italy*
 Alessandra Belisario, *Plant Pathology Research Institute, Rome, Italy*

1. Introduction
2. Diversity of Form
 - 2.1. Hyphae and Mycelium
 - 2.2. Fungal Cells
 - 2.3. Colonization of Substrates
3. Reproduction
 - 3.1. Sexual Reproduction
 - 3.2. Asexual Reproduction
 - 3.3. Spore Dispersal
4. Diversity of Function
 - 4.1. Nutrition
 - 4.2. Saprobic Fungi
 - 4.3. Parasitic Fungi
 - 4.4. Symbiotic Fungi
 - 4.4.1. Mycorrhizas
 - 4.4.2. Lichens
 - 4.4.3. Endophytes
5. Adaptation
 - 5.1. Adaptation to Terrestrial Habitats
 - 5.2. Temperature
6. Economic Relevance of Fungi
 - 6.1. Plant diseases
 - 6.2. Food Spoilage
 - 6.3. Mycotoxins
 - 6.4. Drugs
 - 6.5. Food Production
 - 6.6. Edible Mushrooms

Evolutionary and Molecular Taxonomy

116

Eric H. Harley, *Department of Chemical Pathology, University of Cape Town, South Africa.*

1. Introduction
2. Basic Concepts
 - 2.1. Metabolism, Proteins, and Nucleic Acids
 - 2.2. Nuclear and Organellar Genomes
 - 2.3. Inheritance of Genomes
 - 2.4. Mutation and Molecular Evolution
3. Molecular Methods used in Systematics
 - 3.1. Allozymes
 - 3.2. DNA/DNA Hybridization
 - 3.3. Restriction Fragment Length Polymorphisms (RFLP)
 - 3.4. Restriction Site Mapping
 - 3.5. DNA Sequencing
4. Phylogenetic Analysis
 - 4.1. Distance Methods
 - 4.2. Parsimony Methods
 - 4.3. Maximum Likelihood Methods
 - 4.4. Relative Merits of the Three Approaches
 - 4.5. Reliability of Inferred Trees
 - 4.6. Questions and Precautions
5. Future Developments

Systematics of the Microbial Kingdom(s) and Fungi

139

John C. David, *CABI Bioscience, Egham, England, Surrey, UK*

Gerry S. Saddler, *Scottish Agricultural Science Agency, Edinburgh, Scotland, UK*

1. Introduction
2. The Emergence of the Microbial World
 - 2.1. Timetable of Events
 - 2.2. Universal Ancestor and Early Eucaryotes
3. Microbial Systematics
 - 3.1. Higher Order Classification
 - 3.2. Different Approaches to the Study of Microbial Diversity
 - 3.2.1. The Study of Procaryotes
 - 3.2.2. The Study of Eucaryotes
4. Microbial Species Concepts
 - 4.1. Eucaryotic Species
 - 4.2. Procaryotic Species
5. Rules of Nomenclature
6. The Microbial Tree of Life
 - 6.1. The Procaryotes
 - 6.2. The Eucaryotes
7. Conclusions

Systematics of Archaea and Bacteria

162

Aharon Oren, *Department of Plant and Environmental Sciences, The Institute of Life Sciences, The Hebrew University of Jerusalem, Jerusalem, Israel.*

1. Introduction
2. Systematics, Taxonomy and Nomenclature of Procaryotes - A Few Definitions
3. Procaryote Systematics - A Historical Overview
4. The Formal Framework of Description and Nomenclature of Procaryotes
5. Approaches to the Classification of Procaryotes
 - 5.1. Experimental Tools of Procaryote Taxonomy
 - 5.2. The Species Concept in the Procaryote World
 - 5.3. The Number of Described Procaryote Species
6. *Bacteria* and *Archaea*, the two Domains of the Procaryotic World
 - 6.1. The Recognition of the *Archaea* as a Separate Domain
 - 6.2. The Differences between *Archaea* and *Bacteria*
 - 6.3. Systematics of *Archaea* and the Properties of the Main Groups of *Archaea*
 - 6.4. Systematics of *Bacteria* and the Properties of the Main Groups of *Bacteria*
7. How Many Procaryote Species are there in Nature?
8. Conclusions

Protoctista

187

Carolina Mudespacher Ziehl, *Departamento de Biología. Universidad Autónoma Metropolitana-Iztapalapa. México.*

Irma E. Lira-Galera, *Departamento de Biología. Universidad Autónoma Metropolitana-Iztapalapa. México.*

1. Introduction
2. Classification
 - 2.1. Archamoeba
 - 2.2. Neomonada
 - 2.3. Rhizopoda
 - 2.4. Mycetozoa
 - 2.5. Foraminifera
 - 2.6. Heliozoa
 - 2.7. Radiozoa
 - 2.8. Percolozoa
 - 2.9. Euglenozoa
 - 2.10. Dinozoa

- 2.11. Metamonada
- 2.12. Parabasala
- 2.13. Apicomplexa
- 3. Ciliophora

Systematics of Fungi

217

Silvano Onofri, *Department of Environmental Sciences, University of Tuscia in Viterbo, Italy*
 Alessandra Belisario, *Institute for Experimental Plant Pathology, Rome, Italy*

- 1. Introduction
- 2. Kingdom Fungi
 - 2.1. Phylum Chytridiomycota
 - 2.2. Phylum Zygomycota
 - 2.2.1. Class Zygomycetes
 - 2.2.2. Class Trichomycetes
 - 2.3. Phylum Ascomycota
 - 2.3.1. Class Archiascomycetes
 - 2.3.2. Class Saccharomycetes
 - 2.3.3. Class Ascomycetes
 - 2.3.3.1. Group Plectomycetes
 - 2.3.3.2. Group Pyrenomycetes
 - 2.3.3.3. Group Discomycetes
 - 2.3.3.4. Group Loculoascomycetes
 - 2.3.3.5. Lichenized Ascomycetes
 - 2.4. Conidial or Mitosporic Fungi
 - 2.5. Phylum Basidiomycota
 - 2.5.1. Class Urediniomycetes
 - 2.5.2. Class Ustilaginomycetes
 - 2.5.3. Class Hymenomycetes

Lichens

237

Mauro Tretiach, *Dept. of Biology, University of Trieste, Italy*
 Pier Luigi Nimis, *Dept. of Biology, University of Trieste, Italy*

- 1. Introduction
- 2. Biology
- 3. Lichen compounds
- 4. Evolution
- 5. Classification
 - 5.1. Historical background
 - 5.2. Diagnostic characters
 - 5.3. Orders of Ascomycetes with lichen-forming fungi
 - 5.4. Orders of Basidiomycetes with lichen-forming fungi
 - 5.5. "Imperfect lichenized fungi"
- 6. Geographical distribution
- 7. Ecological role
- 8. Declining lichens
 - 8.1. Pollution
 - 8.2. Loss of habitat
- 9. Future investigations

VOLUME III

Systematic Botany

1

Ashley Nicholas, *School of Life & Environmental Science, University of Durban-Westville, Durban, South Africa*

1. Introduction
2. Aims and Philosophy of Plant Systematics
 - 2.1. The Role of Plant Classifications in Life Support Systems
 - 2.2. Philosophical Basis of Plant Classification
3. History and Development of Plant Systematics
 - 3.1. The First Empirical Plant Classificatory Systems
 - 3.2. The Herbals
 - 3.3. The First Plant Taxonomists
 - 3.4. Natural Plant Classifications
 - 3.5. Phylogenetic Classifications
 - 3.6. Modern Phylogenetic Plant Classifications
 - 3.7. Plant Molecular Systematics
4. Plant Diversity
 - 4.1. Is There a Plant Kingdom?
 - 4.2. Evolution of Photosynthesis
 - 4.3. Endosymbiotic Origin of Plastids
 - 4.4. The Plant Kingdom
 - 4.5. The First Land Plants
 - 4.6. Plants with Vascular Tissue
 - 4.7. The First Terrestrial Ecosystems
 - 4.8. The Lycopod-line
 - 4.9. The Sphenofern-line
 - 4.10. The First Forests
 - 4.11. The Evolution of Seeds
 - 4.12. The First Seed Plants
 - 4.13. The Pine-line
 - 4.14. Ancient Mesozoic Floras
 - 4.15. The Anthophyte Clade
 - 4.16. Evolution of the Flower and Flowering Plants
 - 4.16.1. Why Did Angiosperms Evolve?
 - 4.16.2. What Did the First Angiosperms Look Like?
 - 4.16.3. When Did the Angiosperms Evolve?
 - 4.16.4. Where Did the Angiosperms Evolve?
 - 4.16.5. From What Gymnosperm Ancestor Did the Angiosperms Evolve?
 - 4.17. Flowering Plants
5. Conclusion

Algae

49

Francisco F. Pedroche, *Departamento de Hidrobiología, Universidad Autónoma Metropolitana – Iztapalapa, Mexico and University Herbaria, University of California, Berkeley, USA*

1. Introduction
2. Cyanobacteria
3. Glaucophyta
4. Rhodophyta
5. Chlorophyta
6. Heterokontophyta
7. Dinophyta
8. Haptophyta
9. Cryptophyta

10. Euglenophyta
11. Final Remarks

Bryophyte Systematics

74

Claudio Delgadillo-Moya, *Universidad Nacional Autónoma de México, Mexico*

1. Introduction
2. Morphology
 - 2.1. Anthocerotae (Hornworts)
 - 2.2. Hepaticae (Liverworts)
 - 2.3. Musci (Mosses)
3. Distinguishing Features Among Groups
4. Sources of Systematic Data
 - 4.1. Ontogeny
 - 4.2. Cytology
 - 4.3. Chemistry
 - 4.4. Paleobotany
5. Phylogenetic Relationships
6. Classification
7. Future Research

Systematic Zoology: Invertebrates

93

Ronald Adam Jenner, *Zoological Museum, University of Amsterdam, The Netherlands.*

Frederick Robert Schram, *Zoological Museum, University of Amsterdam, The Netherlands.*

1. Introduction to the systematic zoology of the Metazoa (Animalia)
2. Animal phylogeny: data sources and interpretation
 - 2.1. Morphology
 - 2.2. Molecules
 - 2.3. Fossils
3. Systematic zoology of the Metazoa
 - 3.1. Porifera, Placozoa, Cnidaria, Ctenophora
 - 3.2. Platyhelminthes, Nemertea
 - 3.3. Mollusca, Sipunculida, Entoprocta, Cycliophora
 - 3.4. Annelida, Pogonophora, Myzostomida, Echiura
 - 3.5. Onychophora, Tardigrada, Arthropoda
 - 3.6. Rotifera, Acanthocephala, Gnathostomulida, Micrognathozoa
 - 3.7. Priapulida, Kinorhyncha, Loricifera
 - 3.8. Nematoda, Nematomorpha, Gastrotricha, Chaetognatha
 - 3.9. Ectoprocta, Phoronida, Brachiopoda
 - 3.10. Urochordata, Cephalochordata
 - 3.11. Enteropneusta, Pterobranchia, Echinodermata
 - 3.12. Some extant "problematica"
4. Alternative hypotheses of metazoan relationships
 - 4.1. Morphology
 - 4.2. Molecules
5. Reconciliation and pathways to future progress

Porifera, Cnidaria, and Ctenophora

129

Giorgio Bavestrello, *Istituto di Scienze del Mare University of Ancona, Italy*

Michele Sara, *Dipartimento per lo studio del Territorio e delle sue Risorse, University of Genoa, Italy*

1. Introduction
2. Porifera
 - 2.1. General Remarks

- 2.2. Importance
- 2.3. Form and Function
 - 2.3.1. Size and Shape
 - 2.3.2. Color, Consistency, and Surface
 - 2.3.3. Water Current System
 - 2.3.4. Cell Types
 - 2.3.5. Skeleton
- 2.4. Life Cycle
 - 2.4.1. Sexual Reproduction
 - 2.4.2. Embryonic Development and Larvae
 - 2.4.3. Asexual Reproduction
 - 2.4.4. Regeneration, Individuality, and Life Span
- 2.5. Ecology
- 2.6. Evolution and Paleontology
- 2.7. Phylogeny and Systematics
- 3. Cnidaria
 - 3.1. General Remarks
 - 3.2. Importance
 - 3.3. Form and Function
 - 3.3.1. Body Structure
 - 3.3.2. Size
 - 3.3.3. Color
 - 3.3.4. Cell Types
 - 3.4. Life Cycle
 - 3.4.1. Sexual Reproduction and Development
 - 3.4.2. Asexual Reproduction
 - 3.4.3. Coloniality and Polymorphism
 - 3.4.4. Metagenetic Cycles
 - 3.5. Ecology
 - 3.6. Phylogeny and Systematics
- 4. Ctenophora

Platyhelminthes, Nemertea, and "Aschelminthes"
 Andreas Schmidt-Rhaesa, *University of Bielefeld, Germany*

154

- 1. Introduction
- 2. General Morphology
- 3. Platyhelminthes, the Flatworms
- 4. Nemertea (Nemertini), the Ribbon Worms
- 5. "Aschelminthes"
 - 5.1. Gnathifera
 - 5.1.1. Gnathostomulida
 - 5.1.2. Micrognathozoa (*Limnognathia maerski*)
 - 5.1.3. Rotifera
 - 5.1.4. Acanthocephala
 - 5.1.5. Cycliophora (*Symbion pandora*)
 - 5.2. Nemathelminthes
 - 5.2.1. Gastrotricha
 - 5.2.2. Nematoda, the Roundworms
 - 5.2.3. Nematomorpha, the Horsehair Worms
 - 5.2.4. Priapulida
 - 5.2.5. Kinorhyncha
 - 5.2.6. Loricifera

Annelida
 Greg W. Rouse, *University of Sydney, Australia*

177

1. Introduction
2. Basic Annelid Organization
 - 2.1. Coelom
 - 2.2. Metamerism
 - 2.3. Chaetae
3. Annelid Anatomy
 - 3.1. Body wall
 - 3.2. Parapodia
 - 3.3. Nervous System
 - 3.4. Sense Organs
 - 3.5. Circulation and Respiratory Structures
 - 3.6. Segmental Organs
4. Annelid Diversity
 - 4.1. Polychaeta
 - 4.2. Clitellata
 - 4.3. Unusual or Controversial Groups Placed in Annelida
 - 4.3.1. Echiura
 - 4.3.2. Myzostomida
 - 4.3.3. Siboglinidae (Pogonophora and Vestimentifera)
5. Annelid Behavior and Physiology
 - 5.1. Locomotion
 - 5.2. Feeding
 - 5.3. Osmoregulation
 - 5.4. Symbiosis
6. Reproduction and Development
 - 6.1. Asexual Reproduction in Polychaeta
 - 6.2. Sexual Reproduction in Polychaeta
 - 6.3. Sexual Reproduction in Clitellata
7. Annelid Phylogeny
 - 7.1. Fossil Annelida

Arthropods Other than Insects

203

Frederick Robert Schram, *Institute of Biodiversity and Ecosystem Dynamics, University of Amsterdam, Netherland*

Sven Lange, *Institute of Biodiversity and Ecosystem Dynamics, University of Amsterdam, Netherland*

Alessandro Minelli, *Department of Biology, University of Padova, Italy*

1. Introduction
2. Myriapoda
 - 2.1. Chilopoda
 - 2.2. Diplopoda
 - 2.3. Symphyla
 - 2.4. Pauropoda
 - 2.5. General aspects of myriapod biology
3. Crustacea
 - 3.1. Remipedia
 - 3.2. Cephalocarida
 - 3.3. Branchiopoda
 - 3.4. Maxillopoda
 - 3.5. Malacostraca
 - 3.5.1. Phyllocarida
 - 3.5.2. Hoplocarida
 - 3.5.3. Eumalacostraca
 - 3.6. General aspects of crustacean biology
4. Cheliceriformes [= Cheliceromorpha]
 - 4.1. Pycnogonida
 - 4.2. Chelicerata

- 4.2.1. Merostomata
- 4.2.2. Scorpiones
- 4.2.3. Pseudoscorpiones
- 4.2.4. Solifugae
- 4.2.5. Opiliones
- 4.2.6. Palpigradi
- 4.2.7. Amblypygi
- 4.2.8. Uropygi
- 4.2.9. Schizomida
- 4.2.10. Araneae
- 4.2.11. Ricinulei
- 4.2.12. Acari
- 4.3. General aspects of cheliceriform biology

Insects and Other Hexapodous Arthropods

232

Denis J. Brothers, *School of Botany and Zoology, University of Natal, South Africa*

- 1. Introduction
- 2. What are Insects?
- 3. Why are Insects so Successful?
- 4. Insect Life Cycles
- 5. Ecological Importance of Insects
- 6. Insect Diversity
 - 6.1. Superclass: Hexapoda - Hexapods, Insects sensu lato (i.e., in the broad sense)
 - 6.1.1. Class: Entognatha - Entognathans (may be a paraphyletic group)
 - 6.1.2. Class: Insecta sensu stricto (= Ectognatha) - True Insects

Mollusca

271

Winston F. Ponder, *Centre for Evolutionary Research, Australian Museum, Sydney, NSW 2010, Australia.*

- 1. Introduction
- 2. Relationships and Higher Classification
- 3. General Morphology of the Mollusca
- 4. Gastropoda
 - 4.1. Major Groups, Diversity and Adaptive Radiation
- 5. Bivalvia (=Pelecypoda)
 - 5.1. Major Groups, Diversity and Adaptive Radiation
- 6. Cephalopoda
 - 6.1. Major Groups, Diversity and Adaptive Radiation
- 7. Other Classes - Living and Extinct
 - 7.1. Polyplacophora
 - 7.2. "Aplacophora" (Caudofoveata and Solenogastres)
 - 7.3. Monoplacophora (Helcionelloidea and Tergomya)
 - 7.4. Scaphopoda
 - 7.5. Extinct Groups that have been Suggested as Additional Classes
- 8. Current Knowledge
- 9. Geographic Diversity
- 10. Ecological Diversity
- 11. Conservation
 - 11.1. Marine
 - 11.2. Freshwater
 - 11.3. Terrestrial
- 12. Economic Importance
 - 12.1. Bivalvia
 - 12.2. Cephalopoda
 - 12.3. Gastropoda

About EOLSS	311
--------------------	------------

VOLUME IV

Echinodermata	1
<i>Rich Mooi, California Academy of Sciences, San Francisco, California, USA</i>	

1. Introduction
2. General Morphology of the Echinodermata
 - 2.1. Recognizing an Echinoderm
 - 2.2. Organization of the Echinoderm Body
 - 2.2.1. Morphological Pattern
 - 2.2.2. Embryological Pattern
3. Classification and Relationships of the Echinodermata
4. Edrioasteroid-like Echinoderms
 - 4.1. Morphology of Edrioasteroid-like Echinoderms
 - 4.2. Paleoeecology of Edrioasteroid-like Echinoderms
5. Blastozoans
 - 5.1. Morphology of Blastozoans
 - 5.2. Paleoeecology of Blastozoans
6. Crinoidea
 - 6.1. Morphology of Crinoids
 - 6.2. Reproduction and Development of Crinoids
 - 6.3. Ecology and Behavior of Crinoids
 - 6.4. Economic Importance of Crinoids
7. Asteroidea
 - 7.1. Morphology of Asteroids
 - 7.2. Reproduction and Development of Asteroids
 - 7.3. Ecology and Behavior of Asteroids
 - 7.4. Economic Importance of Asteroids
8. Ophiuroidea
 - 8.1. Morphology of Ophiuroids
 - 8.2. Reproduction and Development of Ophiuroids
 - 8.3. Ecology and Behavior of Ophiuroids
 - 8.4. Economic Importance of Ophiuroids
9. Holothuroidea
 - 9.1. Morphology of Holothuroids
 - 9.2. Reproduction and Development of Holothuroids
 - 9.3. Ecology and Behavior of Holothuroids
 - 9.4. Economic Importance of Holothuroids
10. Echinoidea
 - 10.1. Morphology of Echinoids
 - 10.2. Reproduction and Development of Echinoids
 - 10.3. Ecology and Behavior of Echinoids
 - 10.4. Economic Importance of Echinoids
11. Ongoing and Future Research

Other Invertebrate Taxa	21
<i>Andreas Schmidt-Rhaesa, University of Bielefeld, Germany</i>	

1. Introduction
2. Mesozoa
 - 2.1. Rhombozoa

- 2.2. Orthonectida
- 3. Xenoturbellida (*Xenoturbella bocki*)
- 4. Kamptozoa (Entoprocta)
- 5. Sipunculida
- 6. Tardigrada, the Water-bears
- 7. Onychophora, the Velvet Worms
- 8. Chaetognatha, the Arrow Worms
- 9. Tentaculata, or Lophophorata
 - 9.1. Phoronida
 - 9.2. Bryozoa (Ectoprocta)
 - 9.3. Brachiopoda
- 10. Hemichordata
 - 10.1. Pterobranchia
 - 10.2. Enteropneusta

Tunicata and Cephalochordata

43

Loriano Ballarin, *University of Padova, Italy*
 Paolo Burighel, *University of Padova, Italy*

- 1. Introduction to Protochordata: General Characteristics
- 2. Tunicata
 - 2.1. Ascidiacea
 - 2.1.1. Tunic
 - 2.1.2. Morphology and Physiology
 - 2.1.3. Reproduction and Development
 - 2.1.4. Larval Morphology and Metamorphosis
 - 2.1.5. Ecology and Economic Relevance
 - 2.1.6. Systematics
 - 2.2. Thaliacea
 - 2.2.1. Pyrosomes
 - 2.2.2. Salps
 - 2.2.3. Doliolids
 - 2.3. Appendicularia
 - 2.3.1. Morphology and Behavior
 - 2.3.2. Relevance in Marine Ecosystems
- 3. Cephalochordata
 - 3.1. Morphology and Physiology
 - 3.2. Reproduction and Development

Pisces

68

Ofer Gon, *South African Institute of Aquatic Biodiversity, Grahamstown, South Africa*

- 1. Introduction
- 2. The Biology of Fishes
 - 2.1. Respiration
 - 2.2. Osmoregulation
 - 2.3. Buoyancy
 - 2.4. Prey Detection and Predator Avoidance
 - 2.5. Reproduction
- 3. The Emergence of Fishes
 - 3.1. Agnatha (Jawless Fishes)
 - 3.2. Gnathostomata (Jawed Fishes)
 - 3.2.1. Placodermi (Armored Fishes)
 - 3.2.2. Acanthodii (Spiny-Finned Fishes)
 - 3.2.3. Chondrichthyes (Cartilaginous Fishes)
 - 3.2.4. Sarcopterygii (Lobe-Finned Fishes)

- 3.2.5. Actinopterygii (Ray-Finned Fishes)
 - 3.2.5.1. Basal (Pre-Teleostean) Actinopterygians
 - 3.2.5.2. The Teleostei

Amphibia **100**

Alan Channing, *University of the Western Cape, Cape Town, South Africa*

1. Introduction
2. Classification of Amphibia
3. Gymnophiona
 - 3.1. Morphology
 - 3.2. Life Cycle
 - 3.3. Distribution
 - 3.4. Feeding and Predators
 - 3.5. Little-known Caecilians
4. Caudata
 - 4.1. Morphology
 - 4.2. Life Cycle
 - 4.3. Distribution
 - 4.4. Adult Variation
 - 4.5. Feeding
 - 4.6. Larval Variation
5. Anura
 - 5.1. Morphology
 - 5.2. Life Cycle
 - 5.2.1. Variations in Life-history Strategies
 - 5.3. Distribution
 - 5.4. Adult Variation
 - 5.5. Tadpole Variation
 - 5.6. Food
 - 5.7. Vocalization
 - 5.7.1. Sound Production
 - 5.7.2. Hearing
6. Metamorphosis
7. Ecological Role
8. Declining Amphibians
 - 8.1. Implicated Factors
 - 8.1.1. Ultraviolet Radiation
 - 8.1.2. Loss of Habitat
 - 8.1.3. Introduced Predators
 - 8.1.4. Pollutants
 - 8.1.5. Fungus
 - 8.1.6. Long-term Drought
 - 8.1.7. Human Consumption
9. Skin Secretions
10. Future Investigations

Reptiles **120**

Harold G. Cogger, *Australian Museum, Sydney and Faculty of Science and Mathematics, University of Newcastle, Ourimbah, NSW, Australia*

1. Introduction
2. Diversity and Systematics
 - 2.1. A Brief Overview of the Families of Extant Reptiles
3. The Role of Reptiles in Ecosystems
4. Humans and Reptiles

5. The Global Conservation Status of Reptiles
 - 5.1. Threatening Processes

Birds

163

Walter J. Bock, *Department of Biological Sciences, Columbia University, USA*

1. Introduction
2. Basic attributes
 - 2.1. Body
 - 2.2. Feathers
 - 2.3. Power production
 - 2.4. Song
 - 2.5. Life span
3. Structure and physiology
 - 3.1. Outer shape
 - 3.2. Integument
 - 3.2.1. Feathers
 - 3.2.2. Scales and claws
 - 3.2.3. Bill covering
 - 3.3. Wings
 - 3.4. Legs
 - 3.5. Tail
 - 3.6. Feeding apparatus
 - 3.6.1. Bill
 - 3.6.2. Mouth and Tongue
 - 3.7. Digestive system
 - 3.8. Urinary system
 - 3.9. Respiratory system
 - 3.10. Circulatory system
 - 3.11. Reproductive system
 - 3.12. Sensory system
 - 3.12.1. Hearing
 - 3.12.2. Sight
 - 3.12.3. Smell
 - 3.13. Brain
 - 3.14. Temperature regulation
4. Yearly cycle
 - 4.1. Establishing territories
 - 4.2. Courtship
 - 4.3. Mating systems
 - 4.4. Nests
 - 4.5. Eggs
 - 4.6. Incubation
 - 4.7. Hatching
 - 4.8. Care of the young
 - 4.9. Molt
 - 4.10. Fall migration
 - 4.11. Direction finding
 - 4.12. Navigation
 - 4.13. Winter
 - 4.14. Spring
 - 4.15. Flocking behavior
5. Behavior
6. Distribution
7. Evolution and Classification
 - 7.1. Origin and fossils
 - 7.2. Classification

- 7.2.1. Class Aves
 - 7.2.1.1. Subclass Sauriurae (all extinct)
 - 7.2.1.2. Subclass Ornithurae
 - 7.2.1.2.1. Superorder Neornithae

Mammals

199

Gary Neil Bronner, *Department of Zoology, University of Cape Town, South Africa.*

1. Introduction
2. Mammal characteristics
 - 2.1. Hair
 - 2.2. Epidermal glands
 - 2.3. Lactation and parental care
 - 2.4. Cardiovascular and respiratory specializations
 - 2.5. Feeding specializations
 - 2.6. Improved auditory acuity
 - 2.7. An enlarged brain
3. Mammal evolution
 - 3.1. Ancestors
 - 3.2. Evolutionary trends during therapsid-mammal transition
 - 3.3. The origin of mammals
 - 3.4. Early mammals
4. Systematics
 - 4.1. Traditional classification
 - 4.2. Molecules remodel the eutherian phylogenetic tree
 - 4.3. Modern mammal classification
5. Diversity and conservation priorities
 - 5.1. Diversity
 - 5.2. Global threats and conservation priorities
6. Future research

Primate Evolution

226

Judith Masters, *Natal Museum, Pietermaritzburg, South Africa*

1. Introduction
2. Archaic Primates
3. Early Euprimates—“Primates of Modern Aspect”
 - 3.1. Adapiforms and Omomyiforms
 - 3.2. Early Simians
4. Later Simian Radiations
 - 4.1. Early Monkeys
 - 4.2. The Epoch of the Apes
5. The Origins of Modern Primate Groups
 - 5.1. Nonhuman Primates
 - 5.2. The Human Lineage
 - 5.2.1. Early Hominins
 - 5.2.2. The Genus “*Homo*”

Fundamentals of Biological Science: An Evolutionary Approach

253

Rem V. Petrov, *Academician, RAN, Presidium of Russian Academy of Sciences, Moscow, Russia*
 Emilia I. Vorobyeva, *Correspondent-Member, RAS, Institute of Ecology and Evolution, Russian Academy of Sciences, Moscow, Russia*

1. Introduction
2. Evolutionary Theory and Evolutionary Synthesis

3. Structural Levels of Biosphere Organization
4. The Origin and Development of Life on Earth
 - 4.1. The Origin of Life: History of the Problem
 - 4.2. Stages and Factors of the Development of Life
 - 4.3. Heterochrony as an Evolutionary Phenomenon
 - 4.4. The Problem of Species and Speciation
5. Conclusion

Index **281**
